VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

> Transforming life through excellence in education and research.

MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

- World class Education: Excellence in education, grounded in ethics and critical thinking, for improvement of life.
- Cutting edge Research: An innovation ecosystem to extend knowledge and solve critical problems.
- Impactful People: Happy, accountable, caring and effective workforce and students.
- Rewarding Co-creations: Active collaboration with national & international industries & universities for productivity and economic development.
- Service to Society: Service to the region and world through knowledge and compassion.

VISION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

To be a world-renowned centre of education, research and service in computing and allied domains.

MISSION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

- ➤ To offer computing education programs with the goal that the students become technically competent and develop lifelong learning skill.
- To undertake path-breaking research that creates new computing technologies and solutions for industry and society at large.
- To foster vibrant outreach programs for industry, research organizations, academia and society.

B.Tech – CSE with Specialization in Bioinformatics

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- 1. Graduates will be engineering practitioners and leaders, who would help solve industry's technological problems.
- 2. Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry.
- 3. Graduates will function in their profession with social awareness and responsibility.
- 4. Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.
- 5. Graduates will be successful in pursuing higher studies in engineering or management.
- 6. Graduates will pursue career paths in teaching or research.

B.Tech – CSE with Specialization in Bioinformatics

PROGRAMME OUTCOMES (POs)

- 1. Having an ability to apply mathematics and science in engineering applications.
- 2. Having a clear understanding of the subject related concepts and of contemporary issues.
- 3. Having an ability to design a component or a product applying all the relevant standards and with realistic constraints.
- 4. Having an ability to design and conduct experiments, as well as to analyze and interpret data.
- 5. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice.
- 6. Having problem solving ability- solving social issues and engineering problems.
- 7. Having adaptive thinking and adaptability.

- 8. Having a clear understanding of professional and ethical responsibility.
- 9. Having cross cultural competency exhibited by working in teams.
- 10. Having a good working knowledge of communicating in English.
- 11. Having a good cognitive load management [discriminate and filter the available data] skills.
- 12. Having interest in lifelong learning.

B.Tech – CSE with Specialization in Bioinformatics

PROGRAMME SPECIFIC OUTCOMES (PSOs)

- 1. The ability to formulate mathematical models and problemsolving skills through programming techniques for addressing realtime problems using appropriate data structures and algorithms.
- 2. The ability to design hardware and software through system programming skills based on the knowledge acquired in the system software and hardware courses.
- 3. The ability to interpret relationships among living things and analyze the biological problems, from molecular to ecosystem level, solving them using basic biological concepts, algorithms, and tools available in computer science and to facilitate the biological database system.

Course Code Course Title L						С				
BIT1004	Cell biology and Biochemistry	3	0	2	0	4				
Pre-requisite	NIL	Syl	labu	s ve	rsio	on				
			1	l.1						
Course Objectiv	/es:									
1. Analyze cell str	ructure and its functions									
2. Illustrate the structure and functions of biomolecules										
3. Distinguish the concept of central dogma, cell cycle and cell signaling										
Expected Cours	e Outcome:									
1. Define and rec	call the cell structure and functions									
5	l constituents and biomolecules									
	he characteristic features, properties and types of macromolecules									
	basic concepts of enzymes and its regulations		1							
	principles and regulations of replication, transcription and translation				1					
6. Appraise the si	kills of cell cycle events and signal transduction process in cell, tissu	e and	i org	anie	vei					
Module:1 C	ell structure and Functions		6 hours							
I	eukaryotic cell structure; biomembrane, Transport across cell m	embr	anes							
5	ted diffusion, co-transport and active transport. Cell organelles, cy			-						
and functions.										
Module:2 B	iomolecules			6	ho	urs				
Types of macro r	molecules, metabolites and products. Properties of water. Cellular	carbo	hyd	rates	,lipi	ids				
and their classific	ation.									
Module:3 Pr	roteins			6	ho	urs				
Classification and	properties of amino acids. Peptides and structure of proteins.									
Module:4 E	nzymes			7	ho	urs				
Classification, cat	alysis, properties, cofactors, coenzymes and inhibitors. Thermodyn	iamic	s an	dkin	etic	:s -				
Michaelis-Menter	n equation. Regulatory enzymes.									
Module:5 N	lucleic acids			4	ho	urs				
DNA and RNAs.	Nucleoside and nucleotides. Structure, function and properties of	nucle	ic ac	ids.						
Module:6 C	Central dogma									
Transcription, tr	anslation and protein synthesis in organisms. Replication of	DN	А.	Gene	e a	nd				
chromosomal mu	itations.		-							
	ell cycle and signal transduction					urs				
Mitosis and meio	sis. Cell cycle control system, regulation of check points by mitoger	ns, cy	clins	and	cdk	s.

BIT2001	Analytical Bioinformatics	3	0	2	0	4
Pre-requisite	Nil	Syl	llabu	IS VO	ersio	n
						1.1
Course Objectiv	es:					
1	nowledge on various techniques and areas of applications in bio					
-	non problem in bioinformatics, alignment techniques, ethical is	sues, j	publi	cda	ta so	urces,
and evolution 3 Discover the t	bractical use of tools for specific bioinformatic areas.					
5. Discover the	factical use of tools for specific biofilformatic areas.					
Expected Cours	e Outcome:					
-	dge of bioinformatics in a practical project.					
11,2	bility for critical assessment of scientific research publications in	n bioir	nforr	nati	cs.	
	erstanding of the research process in general, such as research	ch me	thod	ls, s	cient	ific
writing, and re						
	nain databases at the NCBI and EBI resources	a at a p	o aifir	inf		tion
-	databases, tools, repositories and be able to use each one to extra the selected tools at NCBI and EBI to run simple analyses on ge	-				uon
0. Demonstrate	the selected cools at reaching and EDT to run simple analyses on ge		eseq	uen		
Module:1 Intr	oduction to bioinformatics				3	hours
		1				
	tions of bioinformatics, Alignment of pairs of sequences; Intro nt, Methods - Dot matrix sequence comparison	oducti	on- I	Jen	n1t10	n or
	wise sequence alignment				6	hours
	nming algorithm for sequence alignment – Global Alignmen	t. Ne	edler	nan

CSE1003	DIGITAL LOGIC AND DESIGN	3	0	2	0	4
Pre-requisite	NIL	Sy	llabi	ıs ve	ersio	n
						1.0
Course Objectives:		•				
1. Introduce the conc	ept of digital and binary systems.					
2. Analyze and Desig	n combinational and sequential logic circuits.					
3. Reinforce theory an	nd techniques taught in the classroom through experiments in	the la	abora	ıtory	•	
Expected Course O	utcome:					
1. Comprehend the d	ifferent types of number system.					
2. Evaluate and simpl	ify logic functions using Boolean Algebra and K-map.					
8	mbinational logic circuits.					
4. Analyze the operation	ation of medium complexity standard combinational circu	iits li	ke t	he e	encoc	ler,
decoder, multiplexer,	demultiplexer.					
	n the Basic Sequential Logic Circuits					
6. Outline the constru	action of Basic Arithmetic and Logic Circuits					
	nking capability, ability to design a component with realistic co	nstra	ints,	to sc	olve r	eal
world engineering pro	oblems and analyze the results.					
Module:1 Introd	luction				3 ho	ours
Number System - Bas	se Conversion - Binary Codes - Complements(Binary and Dec	imal)				
	ean Algebra				8 ha	
	operties of Boolean algebra - Boolean functions - Canonical			lard	form	1S -
	al gates – Karnaugh map - Don't care conditions - Tabulation	Meth	od			
	binational Circuit - I				4 ho	ours
	Code Converter - Analyzing a Combinational Circuit					
	binational Circuit –II				6 hc	
	er-Look ahead carry - Magnitude Comparator - Dece	oders	_	Enc	oders	3 -
Multiplexers –Demul	1.					
Module:5 Sequ	ential Circuits – I				6 ho	ours
Flip Flops - Sequenti	al Circuit: Design and Analysis - Finite State Machine: Moore	and	Meal	у	mod	el -
Sequence Detector.						
Module:6 Sequ	ential Circuits – II				7 ho	ours
Registers - Shift Regi	sters - Counters - Ripple and Synchronous Counters - Modu	lo co	unte	rs -F	Ring a	ınd
Johnson counters					-	
Module:7 Arith	metic Logic Unit				9 ho	ours
Bus Organization - A	LU - Design of ALU - Status Register - Design of Shifter - P	roces	sor l	Jnit	-Des	ign
of specific Arithmetic	Circuits Accumulator - Design of Accumulator.

Course Code	Course Title	L	Τ	Р	J	C
CSE1007	JAVA PROGRAMMING	3	0	2	0	4
Pre-requisite	NIL	Syl	llabu	is ve	ersi	on
						1.0
Course Objectives:						
1. To impart the core	language features of Java and its Application Programming In	terfac	es (A	PI).		
2. To demonstrate the	Java.					
3. To familiarize stude	nnect	ivity.				
Expected Course Ou	tcome:					
1. Comprehend Java V	Virtual Machine architecture and Java Programming Fundamer	ntals.				
2. Design application	ns involving Object Oriented Programming concepts su	ich a	s in	heri	tano	ce,
association, aggrega	tion, composition, polymorphism, abstract classes and interfac	ces.				
0	ulti-threaded Java Applications.					
	g concepts such as files, collection frameworks and containers					
5. Design and implem	ent Java Applications for real world problems involving Datab	oaseCo	onne	ctivi	ty.	
0 1	Jser Interface using JavaFX.					
7. Design, Develop an	nd Deploy dynamic web applications using Servlets and Java Se	erver l	Pages	3.		
	Fundamentals					urs
	gn goal - Features of Java Language - JVM - Bytecode - Java					
1 0 0	nstructs Arrays one dimensional and multi-dimensional enha	inced	for l	oop	Str	ing
package						
	ct Oriented Programming					urs
	Object Object reference array of objects constructors metho				0	
	- nested class inner class garbage collection finalize() Wrapp		ssesl	nhe	ritai	nce
	blymorphism abstract class interfaces packages and sub package	ès.			1	
	stness and Concurrency					urs
1 0	Exceptions Errors - Types of Exception - Control Flow in Exc	1				
	hrows in Exception Handling - user defined exceptions - M orkload among threads synchronization inter thread communic			0		ead
	Streams and Object serialization	Lauon	ueat			urs
-	I/O streams Working with files Serialization and deseri	alizat	ion			
5	Collection framework List, Map, Set Generics Annotations	anzai.	1011	01 (JUJC	.015
	Programming and Database Connectivity			7	ho	urs
	ising JavaFX, exploring events, controls and JavaFX	mer	าบร	Acc		
databases using JDBC				1100		8

Pre-	Pre-requisite Nil				yllab	us ve	rsion
							1.0
Cou	rse Object	ves:					
1.		and the basic concepts of data structures and algorithms.					
2.	To differen	tiate linear and non-linear data structures and the operations up	on t	nem.			
3.	Ability to p	erform sorting and searchingin a given set ofdata items.					
4.	To compre	hend the necessity of time complexity in algorithms.					
Exp		rse Outcome:					
1.		ling the fundamental analysis and time complexity for a given p	roble	m.			
2.		inear data structures and legal operations permitted on them.					
3.		non-linear data structures and legal operations permitted on the	n.				
4.		suitable algorithm for searching and sorting.					
5.		ling graph algorithms, operations, and applications.					
6.		ling the importance of hashing.					
7.		ne basic data structures to understand advanced data structure o	-		ind a	pplica	tions.
8.	Application	n of appropriate data structures to find solutions to practical prol	olem	s.			
		ntroduction to Algorithms and Analysis					nours
		mportance of algorithms and data structures. Fundamentals of	-			-	-
	-	exity of an algorithm, Types of asymptotic notations and ord		-		-	
	-	st case, worst case, average case, Analysis of non-recursive	and	recur	sive	algori	:hms,
		ysis for recurrence relation – Recursive Tree Method.					
		Linear Data Structures					nours
		2D array, Stack - Applications of stack: Expression Evaluatio	n - (Convei	sion	ot In	tix to
-	-	ix expression, Tower of Hanoi.	\ .	1.		D	
		of Queue: Circular Queue, Double Ended Queue (deQueue					-
-	0	rays - List - Singly linked lists – Doubly linked lists - Circular	linke	d lists	, Ар	plicati	ons -
		ipulation - Josephus problem(permutation)				0.1	
		Sorting and Search Techniques			<u> </u>		nours
	e	near Search and binary search, Applications - Finding squ					0
		Sorting – Insertion sort - Selection sort – Bubble sort – (Cou	111111	g Sori) - Q	uick s	Ort-
-	-	alysis, Applications - Finding the 'n' closest pair's Non-linear Data Structures - Trees				61	ours

Course Code	Course Title	L	Τ	Р	J	С
CSE2004	Database Management System	2	0	2	4	4
Pre-requisite	NIL	Syl	labu	is ve	rsic	on
						1.0
Course Objectives:						
1. To understand the	concept of DBMS and ER Modeling.					
2. To explain the norr	nalization, Query optimization and relational algebra.					
3. To apply the concu	rrency control, recovery, security and indexing for the real time	data				
Expected Course Ou						
1. Explain the basic co	oncept and role of DBMS in an organization.					
2. Illustrate the design	principles for database design, ER model and normalization.					
3. Demonstrate the ba	asics of query evaluation and heuristic query optimization techn	iques	5.			
4. Apply Concurrency	control and recovery mechanisms for the desirable database pr	roble	m.			
5. Compare the basic	database storage structure and access techniques including B	Tree	, B+	Tre	ss a	nd
hashing.						
	ental view on unstructured data and its management.					
7. Design and implem	ent the database system with the fundamental concepts of DBM	MS.				
	ase Systems Concepts And Architecture				hou	
	n for database systems -characteristics of database approach - A					
	scene - Advantages of using DBMS approach- Data Mc

CSE2005	Operating Systems		2	0	2	4	4
Pre-requisite	NIL		Syl	llabu	is ve	rsic	on
							1.0
Course Objectives:							
1. To introduce the co	oncept of Operating system concepts and desig	gns and provide t	he sk	tills r	equi	red	to
implement the serv							
	le-offs between conflicting objectives in large						
3. To develop the kno	owledge for application of the various design is	sues and services					
Expected Course Ou	tcome:						
1. Interpret the evolut	ion of OS functionality, structures and layers.						
2. Apply various types	s of system calls and to find the stages of vario	us process states.					
3. Design a model sch	eduling algorithm to compute various schedul	ing criteria.					
4. Apply and analyze	communication between inter process and syn	chronization tech	niqu	es.			
5. Implement page rep	placement algorithms, memory management p	roblems and segn	nenta	ation	•		
6. Differentiate the fil	e systems for applying different allocation and	access technique	s.				
7. Representing virtua	lization and Demonstrating the various Oper	rating system tasl	ks an	id th	e pri	incij	ple
algorithms for enur	nerating those tasks.						
Module:1 Intro	duction				2	hou	urs
Introduction to OS:	- Functionality of OS - OS Design issues	- Structuring me	etho	ds (r	none	olith	iic,
layered, modular, mi	cro-kernel models) - Abstractions, process	ses, and resource	ces -	- inf	fluen	ice	of
security, networking, n

	Pieces, Arpaci-Dusseau Books, Inc (2015).	
Mo	ode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar	
List	of Challenging Experiments (Indicative)	
1.	Write a boot loader - to load a particular OS say TinyOS/ KolibriOS image - code to	3 hours
	access from BIOS to loading the OS - involves little assembly code may use	
	QEMU/virtual machines for emulation of hardware.	
2.	Allocate/free memory to processes in whole pages, find max allocatable pages,	3 hours
	incorporate address translation into the program.	
3.	Create an interrupt to handle a system call and continue the previouslyrunning process	3 hours
	after servicing the interrupt.	
4.	Write a Disk driver for the SATA interface. Take care to check readiness of the	3 hours
	controller, locked buffer cache, accept interrupts from OS during the period,	
	interrupting the OS again once done and clearing buffers.	
5.	Demonstrate the use of locks in conjunction with the IDE driver.	3 hours
6.	Run an experiment to determine the context switch time from one process to another	3 hours
	and one kernel thread to another. Compare the findings.	
7.	Determine the latency of individual integer access times in main memory, L1 Cache and	3 hours
	L2 Cache. Plot the results in log of memory accessed vs average latency.	
8.	Compare the overhead of a system call with a procedure call. What is the cost of a	3 hours
	minimal system call?	
9.	Compare the task creation times. Execute a process and kernel thread, determine the	3 hours
	time taken to create and run the threads.	
10.	Determine the file read time for sequential and random access based of varying sizes of	3 hours
	the files. Take care not to read from cached data - used theraw device interface. Draw a	
	graph log/log plot of size of file vs average per-block time.	
	Total Laboratory Hours	30 hours

CSE3002	Internet and Web Programming	2	0	2 4	4
Pre-requisite	CSE2004-Database Management System	Sy	labu	s versi	ion
					1.0
Course Objectives:					
1. To comprehen	d and analyze the basic concepts of web programming and inte	ernet	proto	cols.	
2. To describe ho	w the client-server model of Internet programming works.				
3. To demonstrat	es the uses of scripting languages and their limitations.				
Expected Course Ou	tcome:				
After successfully com	pleting the course the student should be able to				
1. Differentiate w	veb protocols and web architecture.				
2. Apply JavaScrip	pt, HTML and CSS effectively to create interactive and dynamic	c weł	sites.		
3. Implement clie	ent side scripting using JavaScript.				
4. Develop applie	cations using Java.				
5. Implement serv	ver side script using PHP, JSP and Servlets.				
6. Develop XML	based web applications.				
7. Develop applic	ation using recent environment like Node JS, Angular JS, JSON	N and	l AJA	Х.	
Module:1 Introdu	ction To Internet			2 ho	ours
Internet Overview-	Networks - Web Protocols - Web Organization and	Addr	essing	g - V	Veb
Browsers and Web Ser	vers -Security and Vulnerability-Web System Architecture – UH	RL - I	Doma	in	
Name – Client-side an	d server-side scripting.				
Module:2 Web De	signing			4 ho	ours
HTML5 – Form ele	ements, Input types and Media elements, CSS3 - Sele	ctors	Bo	x Mo	del,
Backgrounds and Bord	ders, Text Effects, Animations, Multiple Column Layout, User	Inter	face.		
Module:3 Client-	Side Processing And Scripting			7 ho	ours
JavaScript Introductio	on –Functions – Arrays – DOM, Built-in Objects, R	legula	ur E	xpress	ion,
1 .	ndling, Validation- AJAX - JQuery.				
	Side Processing And Scripting – PHP			5 ho	
	- Operators - Conditionals - Looping - Functions - Arra	-

CSE4001	PARALLEL AND DISTRIBUTED COMPUTING	2	0 2	4	4
Pre-requisite	NIL	Sy	llabus	vers	ion
					1.0
Course Objectiv	ves:				
1. To introduc	te the fundamentals of parallel and distributed computing	arch	itectu	es a	nd
paradigms.					
2. To understa	nd the technologies, system architecture, and communication	arc	hitectu	ire t	hat
propelled the	e growth of parallel and distributed computing systems.				
3. To develop	and execute basic parallel and distributed application using b	asic	progr	amm	ng
models and t	ools.				
Expected Cours	se Outcome:				
Students who	complete this course successfully are expected to:				
1. Design and in	nplement distributed computing systems.				
2. Asses models	for distributed systems.				
3. Design and in	nplement distributed algorithms.				
4. Experiment	with mechanisms such as client/server and P2P algorithms, rer	note	proce	dure	calls
(RPC/RMI),	_		-		
(10 0/10,11),	and consistency.				
	requirements for programming parallel systems and critically evaluated	ate th	e stre	ngths	and

EEE1001	Basic Electrical and Electronics En	gineering	2	0	2	0	3
Pre-requisite	NIL		Sy	llab	us v	vers	sion
							1.0
Course Objectives:							
1. To understand the v	various laws and theorems applied to solve elec	tric circuits and r	netwo	orks			
2. To provide the stud	ents with an overview of the most important of	concepts in Elect	rical	andI	Elec	ctro	nics
Engineering which is t	he basic need for every engineer						
Expected Course Ou	tcome:						
1. Solve basic electrica	l circuit problems using various laws and theor	rems					
2. Analyze AC power	circuits and networks, its measurement and saf	ety concerns					
3. Classify and compar	e various types of electrical machines						
4. Design and impleme	ent various digital circuits						
5. Analyze the charac	cteristics of semiconductor devices and co	mprehend the v	vario	us n	noc	lula	tion
	nunication engineering						
6. Design and conduct	experiments to analyze and interpret data						
Module:1 DC c	ircuits				ļ	5 ho	ours
Basic circuit elements	and sources, Ohms law, Kirchhoff's laws, ser	ies and parallel c	onne	ctior	ı of	i cit	cuit
elements, Node volta	ge analysis, Mesh current analysis, Theven	in's and Maxim	um	powe	er 1	tran	sfer

MAT2002	Applications of Differential and DifferenceE	quations	3	0	2	0	4
Pre-requisite	MAT1011 - Calculus for Engineers	Syllab	ous Ve	ersio	n		
			v1.	.0			
Course Objecti	ves:						
The course is air	ned at						
1. Presenting the	e elementary notions of Fourier series, which is vital in	n practical ha	rmoni	c ana	lysis		
2. Imparting the	knowledge of eigenvalues and eigen vectors of matri	ces and the tr	ansfo	rm te	chni	iques	s to
solve linear s	ystems, that arise in sciences and engineering						
3. Enriching the	skills in solving initial and boundary value problems						
4. Impart the l	knowledge and application of difference equations	and the Z	-transf	form	in	discr	ete
-	are inherent in natural and physical processes						
Expected Cour	a Outcomos						
<u> </u>	e course the student should be able to						
		nations from	a tha t	abula	tod	raha	2.0
1 1	cools of Fourier series to find harmonics of periodic f ncepts of eigenvalues, eigen vectors and diagonalisation				lleu	value	28
11,2		on in intear sy	stems				
	chniques of solving differential equations			c		-	
	the series solution of differential equations and finding	g eigen values	, eiger	n fun	ctior	is of	
	ille's problem						
	transform and its application in population dynamics	and digital sig	gnal pi	roces	sıng		
6. Demonstrate	MATLAB programming for engineering problems						
Madalad	Fourier series					(1	
		·	-16			6 ho	
	Euler's formulae - Dirichlet's conditions - Change of	interval - H	alt ran	ige se	eries	– K	MS

Course Objectiv	7es					
1. Understanding	g basic concepts of linear algebra to illustrate its po	wer a	nd ı	ıtility	the	rougł
applications t	o computer science and Engineering.					
	cepts of vector spaces, linear transformations, matrices and	inner	pro	duct	spac	ces in
engineering.						
3. Solve problem	s in cryptography, computer graphics and wavelet transforms					
Expected Cours						
At the end of this	s course the students are expected to learn					
1. The abstract co	oncepts of matrices and system of linear equations using decor	npositi	on m	etho	ds	
2. The basic noti	on of vector spaces and subspaces					
3. Apply the con	cept of vector spaces using linear transforms which is used	n com	puter	graj	phics	an
inner product	spaces					
4. Applications of	f inner product spaces in cryptography					
5. Use of wavelet	t in image processing.					
Module:1	System of Linear Equations		6 ho	urs		
	tion and Gauss Jordan methods - Elementary matrices- per	nutatio	n m	atrix	- in	verse
matrices - System	of linear equations - LU factorizations.					
Module:2	Vector Spaces		6 hoi	ırs		
The Euclidean	space and vector space- subspace -linear combination -	span-	linea	rly c	leper	ndent
independent- bas	es – dimensions - finite dimensional vector space.					
Module:3	Subspace Properties:		6 ho	urs		
Row and colum	nn spaces -Rank and nullity - Bases for subspace - in	rertibili	ty- 1	\ppl	catic	n ir
interpolation.						
Module:4	Linear Transformations and applications		7 ho	urs		
Linear transform	nations – Basic properties-invertible linear transformation	n - 1	natri	ces	of l	inea
transformations -	vector space of linear transformations - change of bases - sir	nilarity				
Module:5	Inner Product Spaces		6 ho	urs		
Dot products an	d inner products - the lengths and angles of vectors - matri	x repre	senta	ition	s of	inne
-	Schmidt orthogonalisation					
Module:6	Applications of Inner Product Spaces		6 ho			
QR factorization	n- Projection - orthogonal projections - relations of funda	nental	subs	pace	s –	Leas
Square solutions	in Computer Codes					
Module:7	Applications of Linear equations		hou			
A T 1 .		· 1	T			tion
	n to coding - Classical Cryptosystems –Plain Text, C Introduction to Wavelets (only approx. of Wavelet from Raw	-	Text	, E	ncryp	Juon

						v1.1
Course Objective	s:	Iation for a computational model and compiler design act computational model a low level system aspects. student should be able to: formal languages top-down as well as bottom-up paradigms for type checking and other semantic checks omate parts of implementation process es and Grammers 3 ho guages and grammars – alphabets – Strings – Operations alysis of the Source Program - Phases of a Compiler Finite Automata 9 ho lence of NFA and DFA (With Proof) - Regular expression With Proof) Lexical Analysis - Recognition of Token utomata 4 ho n 4 ho n of FA – Decision properties of regular languages ith Proof) Machines Machines 15 ho DA – DPDA - Membership algorithm for CFG. Syn p Parsing - Operator-Precedence Parsing - LR Parsers				
1. Provides :	required theoretical foundation for a computational m	odel and	compil	er des	ign	
2. Discuss T	uring machines as a abstract computational model					
3. Compiler	algorithms focus more on low level system aspects.					
Expected Course	Outcome:					
On successful com	pletion of the course, the student should be able to:					
1. Design co	omputational models for formal languages					
2. Design sc	anners and parsers using top-down as well as bottom	up paradi	gms			
3. Design sy	mbol tables and use them for type checking and other	semantic	check	s		
4. Implement	nt a language translator					
5. Use tools	such as lex, YACC to automate parts of implementat	on proces	ss			
Module:1 Int	roduction To Languages and Grammers				3 ł	nours
Overview of a co	omputational model - Languages and grammars – alp	habets – S	Strings	– Ope	eration	ns on
languages, Introd	uction to Compilers - Analysis of the Source Program	ı - Phases	of a C	ompile	er	
Module:2 Re	gular Expressions and Finite Automata				9 ł	nours
Finite automata	– DFA – NFA – Equivalence of NFA and DFA (N	With Proo	f) - Re	gulare	expres	sions
– Conversion b	etween RE and FA (With Proof) Lexical Analy	sis - Rea	cogniti	on of	Toke	ens -
	cal Analyzer using finite automata					
-	hill-Nerode Theorem					
Myhill-Nerode	Theorem - Minimization of FA – Decision pro	perties o	of regu	ılar la	inguag	ges -
Pumping lemma	for Regular languages (With Proof)					
	G, PDAs and Turing Machines					
	-				-	yntax
, ,		ence Parsi	ng - Ll	R Pars		
	ring Machines					
-	s - Recursive and recursively enumerable language	3 – Linea	r bour	nded	utom	ata -
	rchy – Halting problem					
Module:6 Int	ermediate Code Generation					
		tions - As	signm	ent St	ateme	nts -
	de Generation - Intermediate Languages – Declara					
Boolean Express	ions - Case Statements – Backpatching - Procedure C	alls.				
Boolean Express Module:7 Co	ions - Case Statements – Backpatching - Procedure C de Optimization					nours
Boolean ExpressModule:7CoCode Optimization	ions - Case Statements – Backpatching - Procedure C de Optimization on - Basic Blocks and Flow Graphs – The DAG Rep	resentation			ocks -	- The
Boolean ExpressModule:7CoCode OptimizatiPrincipal Sources	ions - Case Statements – Backpatching - Procedure C de Optimization	resentation			ocks -	- The

М	8.elube	Code Generation			7 hour
			0.1.0		
Co	de Gene	ration – Issues in the Design of a	a Code C	enerato	or - The Target Machine - Run-Time
Sto	orage Mar	nagement - Next-Use Information -	- Register	Alloca	tion and Assignment - A Simple Code
Ge	enerator -	Generating Code from DAG			
Re	cent Tre	nds – Just-in-time compilation v	with adap	tive of	ptimization for dynamic languages -
Par	rallelizing	Compilers			
		Total Lecture hour	:s:		60 hours

*	e the functionalities of pixels and coordinate systems	perta	ining	to	grap	hics
manipulation.	1 7	1	0		0 1	
1	monstrate the 2D and 3D objects using graphics algorithms.					
8	y to model and render 3D objects by comprehending the cor	nplex	tities	ofillu	mina	ntior
in virtual scene		1				
4. To realize and	grasp the intricacies involved with various AR/VR devices.					
	interpret the various multimedia communication standards	, app	olicati	ons	and b	oasio
principles.	-					
6. To implement	various graphics algorithms and devise the 2D/3D computer a	inima	tion.			
7. To design and	develop 3D objects in the virtual space					
Module:1 Ba	sic Concepts & Techniques				3 h	our
Pixels-Replicating	Pixels, Pixel Interpolation, Pixel Art Scaling. Bi-linear Interp	olatic	on, Ve	ector	-Sca	ling
Magnitude, Norma	alization, Dot Product, Cartesian and Polar co-ordinate system.					
Module:2 Tw	o Dimensional Graphics Primitives				4 h	our
Bresenham's Line	Algorithm, Mid-point circle Algorithm, Liang-Barsky line clip	pping	g Algo	orithr	n, W	eiler
and Atherton poly	gon clipping Algorithm, Halftoning					
Module:3 Ge	ometric Transformations & Projections				5 h	our
Basic 2D Transf	forms, Basic 3D Transforms, Composite transformation	mat	trices,	, Co	-ordi	inate
transform, Project	ions - Orthographic, Axonometric,1 Point Perspective Projecti	on				
Modulard M					4 h	our
Module:4 Mo	odeling					
Fractal models - L	indenmayer system Models, Deterministic self-similar fractals.	View	ving -1	Draw		he
Fractal models - L Canonical View Ve	0	View	ving -1	Draw		he

Modul	Augmented And Virtual Reality	4 hours							
Unders	nding the Human Senses and their relationship to Output / Input Devices - Co	mponent

CSE3025 LARGE SCALE DATA PROCESSING 2 0 2 4 4 Pre-requisite Nil Syllabus version Course Objectives: 1. To understand the different characteristics and requirement of big data frameworks. 1 2. To explain the concepts of distributed file system and Map Reduce programming. 3. To apply the exposure on inverted indexing and graph data analytic. Expected Course Outcome: I. Define the characteristics of big data and explain the data science life cycle. I. Differentiate between conventional and contemporary distributed framework and characterize storage and processing of large data. 3. Implement and demonstrate the use of the hadoop eco-system. 4 Compare scalable frameworks for large data. 5. Decompose a problem into map and reduce operations for implementation. 6 Design programs to analyze large scale text data. 7. Identify problems suitable for use of graph mining in large data processing. 1
Course Objectives: 1 1. To understand the different characteristics and requirement of big data frameworks. 2. To explain the concepts of distributed file system and Map Reduce programming. 3. To apply the exposure on inverted indexing and graph data analytic. Expected Course Outcome: 1. Define the characteristics of big data and explain the data science life cycle. 2. Differentiate between conventional and contemporary distributed framework and characterize storage and processing of large data. 3. Implement and demonstrate the use of the hadoop eco-system. 4. Compare scalable frameworks for large data. 5. Decompose a problem into map and reduce operations for implementation. 6. Design programs to analyze large scale text data.

5. Decompose a problem into map and reduce operations for implementation.6. Design programs to analyze large scale text data.
6. Design programs to analyze large scale text data.
7. Identify problems suitable for use of graph mining in large data processing.
Module:1Introduction To Big Data And Analytics4 hou
Big Data Overview Characteristics of Big Data Business Intelligence vs Data Analytics.
Module:2Need of Data Analytics4 hou
Data Analytics Life Cycle Data Analytics in Industries Exploring Big data Challenges in handling Bi
Data.
Module:3Big Data Tools4 hou
Need of Big data tools - understanding distributed systems - Overview of Hadoop comparing SQ
databases and Hadoop Hadoop Eco System - Distributed File System: HDFS, Design of HDFS writing
files to HDFS Reading files from HDFS.
Module:4Hadoop Architecture6 hou
Hadoop Daemons - Hadoop Cluster Architecture YARN Advantages of YARN.
Module:5Introduction to MapReduce6 hou
Developing MapReduce Program Anatomy of MapReduce Code - Simple Map Reduce Program
counting things Map Phase shuffle and sort - Reduce Phase Master slave architecture Job Processing i
hadoop Map Reduce Pipelining.
Module:6MapReduce Programming Concepts3 hou
Use of Combiner - Block vs Split Size - working with Input and output format Key, Text, Sequence
NLine file format, XML file format.
Module:7Inverted Indexing and Graph Analytics3 hou
Web crawling inverted index Baseline and revised implementation - Graph Representation Paralle
Breadth first search page rank issues with graph processing.
Total Lecture hours:30 hours

CSE3029	GAME PROGRAMMIN	G	2	0	2	4	4
Pre-requisite	Nil		Syll	abus	ver	sion	
							1.0
Course Objective	s:						
1. To provide an i	n-depth introduction to technologies and tech	niques used in th	ie gan	neind	ustry		
2. To recognize th	e processes, mechanics, issues in game design	and game engine	edevel	opm	ent.		
3. To integrate va	rious technologies such as multimedia, artific	ial intelligence a	nd ph	ysics	engi	ne in	to a
cohesive, intera	ctive game application.						
Expected Course	Outcome: Upon Completion of the course, t	the students will	be abl	e to			
1. Identify the hur	nan roles involved in the game industry and de	escribe their resp	onsibi	lities			
2. Create and proc	luce digital components, games and documen	tation using a var	iety o	f Gar	ne E	ngin	es.
3. Design the grap	hics based games and learn to manage the gra	phics devices.					
4. Construct the g	ame using artificial intelligence and physics ba	sed modeling.					
5. Create various t	ypes of games with different types of modes a	and perspectives.					
6. Develop, test, a	nd evaluate procedures of the creation, design	and developmer	nt of g	ames	5.		
7. Design unique	gaming environments, levels and characters.						
Module:1 In	troduction to Game Programming					1 h	ours
Overview of game	programming, game industry						
Module:2 G	ame Engine Architecture					5 h	ours
Engine Support, R	esource Management, Real Time Game Arch	itecture,					
Module:3 G	raphics					6 h	ours
Graphics Device M	lanagement, Tile-Based Graphics and Scrollin	ıg, GUI program	nming	for g	ame	5,	
Module:4 An	rtificial Intelligence and Physics					6 h	ours
Artificial Intelligen	ice in games, Physics based modeling, Path	finding algorithm	ms, Co	ollisio	ondet	tectio	n
Module:5 G	ame design					8 h	ours
Game design, Diffe	ering game types, modes, and perspectives, scr	ipting, audio eng	ineeri	ng, S	Sound	d	
and Music, level de	sign, render threading						
Module:6 Pr	oject management					3 h	ours

Total Laboratory Hours 30 hours

List of Experiments (Indicative)

- 1. Install and configure information security devices
- 2. Penetration Testing
- 3. MySQL SQL Injection
- 4. Information security incident Management
- 5. Intrusion Detection/Prevention
- 6. Port Redirection and Tunneling
- 7. Exploring the Metasploit Framework
- 8. Working with Commercial Tools like HP Web Inspect and IBM AppScan etc.,
- 9. Explore Open Source tools like sqlmap, Nessus, Nmap etc
- 10. Documentation with Security Templates from ITIL
- 11. Carry out backups of security devices and applications in line with information security policies, procedures and guidelines
- 12. Information security audit Tasks Procedures/guidelines/checklists for the audit tasks

Analyze and implement image processing algorithms for various real-time applications. 6. Analyze and implement image Processing Paradigm - Elements of digital image processing- Image model. Sampling and quantization-Relationships between pixels- Connectivity, Distance Measures between pixels - Color image (overview, various color models)-Various image formats - bmp, jpeg, tiff, png, gif, etc. Module:2 Digital Image Properties - Operations on Digital Images 6 hours Topological Properties of Digital Images-Histograms, Entropy, Eigen Values-Image Quality Metrics-Noise in Images Sources, types. Arithmetic operations - Addition, Subtraction, Multi- plication, Division-Logical operations NOT, OR, AND, XOR-Set operators-Spatial operations Single pixel, neighbourhood, geometric-Contrast Stretching-Intensity slicing-Bit plane slicing Power Law transforms Module:3 Image Enhancement 6 hours Spatial and Frequency domain-Histogram processing-Spatial filtering-Smoothening spatial filters- 6 hour								
1. Ascertain and describe the basics of image processing concepts through mathematical interpretation. 2. Acquire the knowledge of various image transforms and image enhancement techniques involved. 3. Demonstrate image restoration process and its respective filters required. 4. Experiment the various image segmentation and morphological operations for a meaningfulpartition of objects. 5. Design the various basic feature extraction and selection procedures and illustrate the various image compression techniques and their applications. 6. Analyze and implement image processing algorithms for various real-time applications. 6. Analyze and implement image processing Paradigm - Elements of digital image processing- Image model. Sampling and quantization-Relationships between pixels- Connectivity, Distance Measures between pixels - Color image (overview, various color models)-Various image formats - bmp, jpeg, tiff, png, gif, etc. Module:2 Digital Image Properties - Operations on Digital Image Quality Metrics-Noise in Images Sources, types. Arithmetic operations - Addition, Subtraction, Multi- plication, Division-Logical operations NOT, OR, AND, XOR-Set operators-Spatial operations Single pixel, neighbourhood, geometric-Contrast Stretching-Intensity slicing-Bit plane slicing Power Law transforms Module:3 Image Enhancement 6 hours Spatial and Frequency domain-Histogram processing-Spatial filtering-Smoothening spatial filters- 6 hours

CSE4020	MACHINE LEARNING	3	0	2	0	4
Pre-requisite	MAT2001	Syl	Syllabus version			n
						1.1
Course Objective						
1 . Basic ability to u	inderstand the concept of supervised and unsupervised learning t	echn	ique	S		
2. Differentiate re	gression, classification and clustering techniques and to implen	nent	thes	ealgo	orithe	ms.
, 1	performance of various machine learning techniques					
	priate features for training machine learning algorithms and to	redu	ice t	hedi	mens	sion
of the dataset.						
	ient method to handle missing and imbalanced data and to com	binec	diffe	rent	mach	ine
learning algorith	ims to achieve a better results.					
	2					
Expected Course						
-	haracteristics of machine learning that makes it useful to solve rea		-	roble	ems.	
	n for classification and regression approaches in real-world application	ation	IS.			
-	e to combine machine learning models to achieve better results.					
	opriate clustering technique to solve real world problems.	1	·.1			
	s to reduce the dimension of the dataset used in machine learning				1	
	ble machine learning model, implement and examine the perform	manc	ce of	the	cnos	sen
e	en real world problems. Fing edge technologies related to machine learning applications.					
7. Understand Cut	ing edge technologies related to machine learning applications.

Mo	ode of Eval	uation: CAT / Assignment / Quiz / FAT / Project / Seminar	
Li	st of Challe	nging Experiments (Indicative)	
1.	1. Get the	HelloVIT midlet on the "getting started" page working.	4 Hours
	2. Make so	ome changes - e.g. the text of the String item.	
	3. Put in a	n error - e.g. divide by zero, to see how the development environment attempts	
	to point of	at on the PC when a runtime error occurs on the phone emulator.	
	4. Get the	MIDlet "First MIDlet Progam" in the handout working (ok, so it's really our	
	second M	Dlet). Copy the code from the handout.	
	-	the MIDlet by additing these additional items to the form e.g. TexField,	
	DateField, parameter	Gauge. Look up the lcdui package to see what Items can be added and the s needed	
		a output to the PC console while the program is running e.g. place this code in uctor: System.out.println("in Constructor"); // This will ouput on the PC	
		ot on the phone	
		d: System.out.println("in CommandAction method"); to the Command Action	
		see when that method is running.	
		preSytem.out.println'sin the following methods:	
	o. muu mo	1. startApp	
		2. pauseApp	
		3. destroyApp	
	9. Note th	e sequence of method calls from MID let start to end.	
2.		Det - adding a new command	4 Hours
		e to add to 2.0 First MIDlet by adding an "OK" command (look up the API	
	comman		
		e"OK" command display on the phone's screen.	
		e to process the "OK" command	
		actionCommand method display the contents of the TextFrield using	
		put.println()	

DECRU R.4N	(Deemed to be University under section 3 of UGC Act, 1956) WITH Spectralization in Diomitorinatics (2	017)
	5. Add two more commands e.g. Send, Spell Check.	
	6. Where were they placed?	
	7. Add code to check for these commands - add System.out.println's to show when that	
	code is being executed.	
	8. Now use System.out.prinln in the OK processing code ad see the text being modified	
	while the program runs.	
	9. Add another System.out.prinln in the OK to display the value of the gauge (if it's not	
	interactive, go back to the API to see how to make it interactive)	
3	Additon MIDlet	4 Hours
	1. Create a MIDlet that allows you to enter a number. The number is then added to any	
	prevous number and the running total result is displayed. Use a TextBox to recieve text	
	from the user (instead of a Form as in the previous example).	
	2. Can you crash the program by entering text instead of numbers? If you can then	
	constrain the user input to numbers only.	
4	Additon MIDlet on a real phone	4 Hours
	1. For the addition MIDlet : Use the IDE to Create a JAR file.	
	2. (Optionally) Transfer the JAR file to you phone and test. See handout on howto create	
	and deploy a JAR file.	
5	Battery Status	4 Hours
	Create an MIDlet that displays a coloured bar to display a car battery's status. The battery	
	voltage is entered into the MIDlet as a floating point number.	
	Display a bar graph as follows: 0-9.5 - Red (battery dead) >9.6 <12 - Yellow (battery poor)	
	>12 <14.4 - Green (battery good) >14.4 - Blue (Alternator faulty)	
6	Secret Text	5 Hours
	Develop an MIDlet that has a TextField and Label GUI components.	
	When a piece of text is entered the MIDlet 'encrypts' the text by replacing each letter using	
	the following mapping:	
	MLKJIHGFEDCBA	
	NOPQRSTUVWXYZ	
	So A -> Z, N-> M, B-> Y, O->L etc	
	Display the encrypted text back in the TextField (so pressing enter should giveyou back	
	the original text).	
	Display the length of the entered text using the Label.	
	Develop an MIDlet that has a TextField and Label GUI components.	
	When a piece of text is entered the MIDlet 'encrypts' the text by replacing eachletter using	
	the following mapping:	
	MLKJIHGFEDCBA	
	NOPQRSTUVWXYZ	
	So A -> Z, N-> M, B-> Y, O->L etc	
	Display the encrypted text back in the TextField (so pressing enter should giveyou back	
	the original text).	
	Display the length of the entered text using the Label.	

VIT OF

Vellore Institute of Technology

7	7 Missing Letter Game							
	Develop an MIDlet or application that displays a word at random with a random letter(s)							
missing. The user has to guess the missing letter(s) by entering it/them into a text field(s).								
	You can use an array or vector to store some words internally in the program.

GRE1001	1	Modern Greek	2	0	0	0	2
Pre-requis	site	NIL	Sylla	abus	ver	sion	1.0
Course Obje	ctives	:					
1. To maste	er the (Greek terminology widely used in their subjects of specia	alizatio	on			
2. To comm	nunica	te in Modern Greek in their day to day life					
3. To provid	de gen	eral information about Greece (e.g. geography, weather	, food	etc.)			
Expected Co	ourse (Outcomes:					
Students will I	be abl	e:					
1. To correct	ctly pi	conounce Greek symbols and words, being more cons	cious	and	conf	ident	in the
usage of	their I	English vocabulary derived from Greek.					
2. To make	use o	f Modern Greek language in simple everyday conversat	ion.				
3. To unde	erstand	contents from scientific texts that make use of G	reek s	symb	ols	and v	vords,
becoming	g fami	liar with fundamental linguistic aspects of the Internati	onal S	Scien	tific	Voca	oulary
		oming able to formulate hypotheses about unknown	comp	ounc	wo	rds d	erived
from Gre	eek.						
4. To be m	nore a	ware about the evolution of Modern European langu	iages,	und	ersta	ındinş	g the
importan	nt conf	nections between English and Greek/Neo-Latin langua	ges.				
5. To unde	erstand	l important socio-economic issues in contemporary	Europ	pe, d	evel	oping	their
aptitude	for cri	tical thinking.					
Module:1		k Alphabet: Correct usage and Pronunciation of Gr	eek		4	4 hou	rs
	syml				/		
-		c rules of diphthongs: alpha-iota / epsilon-iota / omi				-	
		isonants and their correct pronunciation; double conso					
	lls: cor	rrect pronunciation of the 24 Greek letters; correct pro	onunc	atioi	1 01	aipht	nongs
digraphs. Module:2	C #00	tings introducing onesolf Proper Nouns and Pro-	204			3 hou	140
Wodule:2		tings, introducing oneself; Proper Nouns and Prop k Names	ber			5 1100	ITS
Communicatio		ctions: using formal and informal greetings; introducin	a one	elf r	ising	offire	native
form.	ve iun	cuons. using tormar and informar greenings, introducing	gones		ising	a11111	nauve
	lls: not	minative case and vocative case (singular), personal pro	กกามท	s ve	rhs a	น์และ	(to be)
and μελένε (to			moun	, vc	103 (iput	
•		tion skills: introducing oneself using Greek letters and w	orde				
Module:3		ionality and Provenance	0103.			5 hou	rs
		actions: providing personal details such as nationalit	v ado	tress			
		to name a few relevant landmarks in a city.	<i>,</i>		wiit		
	0	nmon nouns (masculine in $-0\varsigma/-\eta\varsigma/-\alpha\varsigma$; feminine in $-\alpha/$	-໗: ກອ	uter	in -0	/-ι): α	π ó / σε
		ardinal numerals from 1 to 10; verb μ ένω (simple presen			0	, .,,,	,
		tion skills: introducing oneself providing specific details	·	t c ou	ntrv	and c	ity of
		phone number.			·· ,		-, ~-
	,						

Module:	4 Family	5 hours
Communi	cative functions: describing one's family and describing elementary	y physical traits
(μικρός/μ	εγάλος – μελαχρινός/ξανθός – ψηλός/κοντός).	
Grammar	skills: possessive pronouns (singular/plural); word accent	
Written co	ommunication skills: describing family and family members.	
Module	5 In the classroom: introducing others, languages and	4 hours
110000	nationality adjectives	
Ccommun	nicative functions: introducing others by providing information on their	r nationality and
spoken la	nguage(s); naming the objects in a classroom.	
Grammar	skills: verb μ λ $\acute{\omega}$ (simple present); nationality adjectives.	
Written co	ommunication skills: introducing friends and relatives providing specific in	nformation about
the langua	ge they speak.	
Module	Months and seasons of the year; days of the week; time	4 hours
	and weather	
	cative functions: defining time and date; talking about weather conditions.	
Grammar	skills: cardinal numerals from 11 to 100; interrogative pronot	un (ποιος-ποια-
$\pi o (o / \tau i);$	time adverbials (τώρα, σήμερα, χθες, αύριο, φέτος πέρσι, του	οχρόνου, πότε);

JAP1001	JAPANESE FOR BEGINNERS	2	0	0	0	2
Pre-requisite	Nil	S	yllab	us v	ersio	n
_				1.0		
Course Objectives	5:					
The course gives st	udents the necessary background to:					
1. Develop four	r basic skills related to reading, listening, speaking and writing Japa	anese	e lang	guage	2.	
2. Instill in learn	ners an interest in Japanese language by teaching them culture an	nd ge	nera	letiqu	lette	5.
3. Recognize, re	ead and write Hiragana and Katakana.					
Expected Course	Outcomes:					
Students will be abl	e to:					
1. Remember Jap	anese alphabets and greet in Japanese.					
2. Understand pr	onouns, verbs form, adjectives and conjunctions in Japanese.					
3. Remember tim	e and dates related vocabularies and express them in Japanese.					
4. Create simple of	questions and its answers in Japanese.					
5. Understand the	e Japanese culture and etiquettes.					
Module: 1	Introduction to Japanese syllables and Greetings				hour	
	Japanese language, alphabets; Hiragana, katakana, and Kanji 🛛					wels
	Hiragana – writing and reading; Vocabulary: 50 Nouns and 20 pro	nou	ns, G		0	
Module: 2	Demonstrative Pronouns				hour	
	a N2 desu, Japanese Numerals, Demonstrative pronoun - Kore					
•	r there, which) Kono, sono, Ano and Dono (this, that, over t			,		
	nd Dochira. this way) Koko, Soko, Asoko and Doko (Here	e, Th	ere.			-

Ap	proved by A	cademic Council	No. 37		Date	16-06-2015	

Course Code	Course Title	L	Т				
MAT2001	Statistics for Engineers	3	0	2	0	4	
Prerequisites	MAT1011 – Calculus forEngineers		Syllab	us Vers	sion:	1.0	
Course Objectives	:						
1. To provide stud	lents with a framework that will help them cho	ose the	appro	priate d	escriptiv	ve	
methods in vario	ous data analysis situations.						
2. To analyse distril	butions and relationship of real-time data.						
3. To apply estimat	tion and testing methods to make inference and n	nodelling	techn	iques fo	r decisio	on	
making.							
Expected Course (Outcome:						
At the end of the co	ourse the student should be able to:						
1. Compute and int	terpret descriptive statistics using numerical and gr	aphical t	echniq	ues.			
2. Understand the	basic concepts of random variables and find an a	ppropria	te dist	ribution	for ana	lysinį	
data specific to a	n experiment.						
3. Apply statistical	methods like correlation, regression analysis in a	nalysing	, interp	preting	experin	nenta	
data.							
4. Make appropriate	e decisions using statistical inference that is the cen	tral to ex	perime	ental res	earch.		
5. Use statistical me	ethodology and tools in reliability engineering prob	olems.					
6. Demonstrate R p	programming for statistical data						
Module: 1	Introduction to Statistics		6	6 hours			
	tistics and data analysis-Measures of central	endency	–Mea	asures of	of varial	oility-	
c	s-Kurtosis (Concepts only)].						
Module: 2	Random variables			8 hours			
	om variables-Probability mass Function, distribu						
Probability distribu	tion and joint density functions- Marginal, co	onditiona	l distr	ibution	and de	ensity	
	atical expectation, and its properties Covarian	ce, mon	nent ge	eneratin	g functi	on –	
characteristic function	on.

Algebra and functions

Module:4	Recruitment Essentials	5hours
Module:4 Recruitment Essentials Looking at an engineering career through the prism of an effective resume • Importance of a resume - the footprint of a person's career achievements		
• Importa	nce of a resume - the footprint of a person's career achievements	

- How a resume looks like?
- An effective resume vs. a poor resume: what skills you must build starting today andhow?

Impression Management

Getting it right for the interview:

- Grooming, dressing
- Body Language and other non-verbal signs
- Displaying the right behaviour

Module:5	Verbal Ability

Grammar challenge

A practice paper with sentence based and passage-based questions on grammar discussed. Topics covered in questions are Nouns and Pronouns, Verbs, Subject-Verb Agreement, Pronoun-Antecedent Agreement, Punctuations

Verbal reasoning

Course code	Course title	L	Τ	Р	J	С		
STS2201	Numerical Ability and Cognitive Intelligence	3	0	0	0	1		
Pre-requisite								
Course Objectives:								
1. To develop the	e students' logical thinking skills and apply it in the real-life	scenari	os					
	rategies of solving quantitative ability problems							
	verbal ability of the students							
Expected Course								
	be able to demonstrate critical thinking skills, such as pro-	olem so	lving	related	d to 1	heir		
subject matters								
	e able to demonstrate competency in verbal, quantitative a	nd rease	oning	aptitu	de			
3. Students will b	e able to perform good written communication skills							
	T · · · D ·				40.1			
Module:1	Logical Reasoning				10 h	ours		
	s, Direction sense and Cubes							
Clocks								
Calendar								
Direction	1 Sense							
• Cubes								
Practice on advan	1							
Data interpretati	ion and Data sufficiency - Advanced							
Advanced	l Data Interpretation and Data Sufficiency questions of CA	T level						
Multiple o	chart problems							
Caselet pr	oblems							
Module:2	Quantitative Aptitude				19 h	ours		
Time and work	– Advanced							
Work with	h different efficiencies							
Pipes and	cisterns: Multiple pipe problems							
Work equ	ivalence							
Division	of wages							
Advanced	l application problems with complexity in calculating total	work						
Time, Speed and	d Distance - Advanced							
Relative s	speed							
Advance	d Problems based on trains							
Advance	d Problems based on boats and streams							
 Advanced Problems based on races 								
Profit and loss, I	Partnerships and averages - Advanced							
• Partnersh								
Averages	-							
Weighted								
_	d problems discussed							

(D)

B.TECH – Computer Science and Engineering with Specialization in Bioinformatics (2019)

Number system - Advanced

Advanced application problems on Numbers involving HCF, LCM, divisibility tests, remainder and power cycles.

Module:3	Verbal Ability					13 hours	
Sentence Correction - Advanced							
Subject-Verb Agreement							
Modifiers							
• Parallelisn	1						
Pronoun-	Antecedent Agreement						
• Verb Tim	e Sequences						
• Comparise	ons						
Preposition	ns						
• Determine	ers						
Quick introductio	n to 8 types of errors fol	lowed by	exposure to	GMAT le	vel questions	5	
Sentence Compl	etion and Para-jumbles	s - Adva	nced				
• Pro-active	thinking						
• Reactive t	hinking (signpost words,	root wo	ords, prefix su	ffix, senter	nce structure	clues)	
 Fixed jum 	bles						
Anchored	jumbles						
Practice on advan	ced GRE/ GMAT level	question	.S				
Reading Compre	chension – Advanced						
Exposure to diffic	ult foreign subject-based	RCs of	the level of C	GRE/ GM	AT		
Module:4	Writing skills for pla	cement	ts			3 hours	
Essay writing							
• Idea gener	ration for topics						
• Best pract	ices						
• Practice as	nd feedback						
То	tal Lecture hours:			4.	5 hours		
	ion: FAT, Assignments,	3 Assess	sments with 7	Ferm End	FAT (Comp	uter Based Test)	
			- +				
-				=		Delhi.

VIT

• Advanced probability		
Advanced probability Module:3 Verbal Ability		5 hour
Image interpretation		0 110 04
1. Image interpretation: Methods		
<u> </u>	n questions through brainstorming and practice	
Critical Reasoning - Advanced	in questions unrough brainstorning and practice	
1. Concepts of Critical Reasoning		
2. Exposure to advanced questions	of GMAT level	
Module:4 Recruitment Es		8 hou
Mock interviews		
Cracking other kinds of interviews		
Skype/ Telephonic interviews		
Panel interviews		
Stress interviews		
Guesstimation		
1. Best methods to approach guess	timation questions	
2. Practice with impromptu intervie	ew on guesstimation questions	
Case studies/ situational interview		
1. Scientific strategies to answer cas	se study and situational interview questions	
2. Best ways to present cases		
3. Practice on presenting cases and	answering situational interviews asked in recruitm	
	and weining bituational interviews ablied in reeration	ent rounds
Module:5 Problem solving		
	g and Algorithmic skills	
1. Logical methods to solve problem	g and Algorithmic skills	
1. Logical methods to solve problem	g and Algorithmic skills	18 hou

Vellore Institute of Technology (Deemed to be University under section 3 of UGC Act, 1956)

Course Code	Course Title	L	Т	Р	J	C
STS3001	Preparedness for External Opportunities			0	0	1
Pre-requisite NIL Syllabus version 2						
Course Objectives	8:					•
1. To effectively ta	ackle the interview process, and leave a positive impressi	on wi	th you	ır pro	ospec	tive
employer by reir	nforcing your strength, experience and appropriateness for	the jo	b.			
2. To check if cand	lidates have the adequate writing skills that are needed in an	1 orga	nizatio	on.		
3. To enhance the	problem solving skills.					
Expected Course						
1. Enabling studen	ts acquire skills for preparing for interviews, presentations	and h	gher e	educa	tion	
Module:1	Interview Skills				3 ho	ours
Types of interview						
	tructured interview orientation, Closed questions and hypo	thetica	ıl ques	tions	,	
1 1	pective, Questions to ask/not ask during an interview					
Techniques to fac	e remote interviews					
Video interview, Re	ecorded feedback, Phone interview preparation					
Mock Interview						
Tips to customize p	preparation for personal interview, Practice rounds					
Module:2	Resume Skills				2 ho	ours
Resume Template	2					
Structure of a stand	ard resume, Content, color, font					
Use of power verb	98					
Introduction to Por	wer verbs and Write up					
Types of resume						
Quiz on types of re	sume					
Customizing resu						
-	in customizing resume, Layout - Understanding different of	ompa	ny's			
1 0	zing career portfolio					
Module:3	Presentation Skills				6 ho	ours
Preparing present						
1 1 1	Power Point presentation, Outlining the content, Passing the	ne Ele	vator '	Test		
Organizing mater						
	ntroduction , body and conclusion, Use of Font, Use of Co	olor, S	trategi	С		
presentation						
0	preparing visual aids		C			
1 11	bes of visual aids, Animation to captivate your audience, De	esign o	ot post	ers		
Dealing with ques				_		
Setting out the grou	and rules, Dealing with interruptions, Staying in control of	the qu	estion	s,Hai	ndling	5
difficult questions						

Module:4	Quantative Ability	14 hours
Permutation-Comb		14 110013
	Linear Arrangement, Circular Arrangements	
Probability	Encar Attangement, Grediar Attangements	
•	ty Independent and Dependent Events	
	ity, Independent and Dependent Events	
Geometry and Mens		
1 10	n, 2D & 3D Figures, Area & Volumes	
Trigonometry		
Heights and distances	s, Simple trigonometric functions	
Logarithms Introduc	ction,	
Basic rules Functions	i	
Introduction, Basic ru	ıles	
Quadratic Equation	15	
Understanding Quad	ratic Equations, Rules & probabilities of Quadratic Equation	S
Set Theory		
Basic concepts of Ver	nn Diagram	
Module:5	Reasoning Ability	7 hours
Logical reasoning		
Syllogisms, Binary log	ric, Sequential output tracing, Crypto arithmetic	
Data Analysis and	Interpretation	
Data Sufficiency		
Data interpretation-A	dvanced Interpretation tables, pie charts & bar chats	
Module:6	Verbal Ability	8 hours
Comprehension and	Logic	
Reading comprehensi	ion Para	
Jumbles		
Critical Reasoning :		
Premise and Conclusi	ion, Assumption & Inference, Strengthening & Weakening a	n Argument
Module:7	Writing Skills	5 hours
Note making		
What is note making,	Different ways of note making	
Report writing		
	g, How to write a report, Writing a report & work sheet	
Product description		
Designing a product,	Understanding it's features, Writing a product description	
Research paper		
	ortance, Writing sample research paper	
Research and its impo		5 hours
Research and its impo

C Programming: C Programming Absolute Beginner's Guide (3rd Edition) by Greg Perry, Dean Mil	2. To develop log	gics which will help th	nem to create progr	ams, appli	cations in	С.				
1. Clear knowledge about problem solving skills in DS & Algorithms concepts Module:1 Data Structures Introduction to data structures, Array, Linked List, Stack, Queue, Trees. 10 hour Introduction to Algorithms, Searching Algorithms, Sorting Algorithms, Greedy Algorithm, Divid and Conquer, Analysis of Algorithm. 15 hour Module:3 C Programming 10 hour Introduction to C, Execution and Structure of a C Program, Data Types and Operators, Control Statements, Looping, Arrays, Structure, Pointers, Memory Management in C, Functions Module:4 C++ Programming 5 hour Introduction to C++, Need for OOP, Class & Objects, Create C++ & Java class and show th similarity Encapsulation, Access Specifiers, Relationship, Polymorphism, Exception Handling, Abstrac Classes. 5 hour Module:5 JAVA 5 hour Introduction to Java, Data Types and Operators, Control Statements, Looping, Arrays, Need for OOP 5 hour Introduction to Java, Data Types and Operators, Control Statements, Looping, Arrays, Need for OOP 5 hour Introduction to Java, Bata Types and Operators, Control Statements, Looping, Arrays, Need for OOP 5 hour Introduction to Java, Bata Types and Operators, Control Statements, Looping, Arrays, Need for OOP 5 hours Reference Books 1 10 hours: 1. Data Structures and Algorithms	3. To learn how t	to design a graphical u	user interface (GUI) with Java	ı Swing.					
1. Clear knowledge about problem solving skills in DS & Algorithms concepts Module:1 Data Structures Introduction to data structures, Array, Linked List, Stack, Queue, Trees. 10 hour Introduction to Algorithms, Searching Algorithms, Sorting Algorithms, Greedy Algorithm, Divid and Conquer, Analysis of Algorithm. 15 hour Module:3 C Programming 10 hour Introduction to C, Execution and Structure of a C Program, Data Types and Operators, Control Statements, Looping, Arrays, Structure, Pointers, Memory Management in C, Functions Module:4 C++ Programming 5 hour Introduction to C++, Need for OOP, Class & Objects, Create C++ & Java class and show th similarity Encapsulation, Access Specifiers, Relationship, Polymorphism, Exception Handling, Abstrac Classes. 5 hour Module:5 JAVA 5 hour Introduction to Java, Data Types and Operators, Control Statements, Looping, Arrays, Need for OOP 5 hour Introduction to Java, Data Types and Operators, Control Statements, Looping, Arrays, Need for OOP 5 hour Introduction to Java, Data Types and Operators, Control Statements, Looping, Arrays, Need for OOP 5 hour Introduction to Java, Data Types and Operators, Control Statements, Looping, Arrays, Need for OOP 5 hours Reference Books 1 10 haustructures and Algorithms: https://ecc.uwaterloo.ca/~dwharder/aads/Lecture_materials/:										
Module:1 Data Structures 10 hour Introduction to data structures, Array, Linked List, Stack, Queue, Trees. Module:2 Algorithms 15 hour Introduction to Algorithms, Searching Algorithms, Sorting Algorithms, Greedy Algorithm, Divid and Conquer, Analysis of Algorithm. 10 hour Module:3 C Programming 10 hour Introduction to C, Execution and Structure of a C Program, Data Types and Operators, Control Statements, Looping, Arrays, Structure, Pointers, Memory Management in C, Functions Module:4 Module:4 C++ Programming 5 hour Introduction to C++, Need for OOP, Class & Objects, Create C++ & Java class and show th similarity Encapsulation, Access Specifiers, Relationship, Polymorphism, Exception Handling, Abstrac Classes. Module:5 JAVA 5 hour Introduction to Java, Data Types and Operators, Control Statements, Looping, Arrays, Need for OOF Class & Objects, Create C++ & Java class and show the similarity Encapsulation, Access Specifiers Relationship, Polymorphism, Exception Handling, Abstract Classes, Interfaces. Total Lecture hours: 45 hours Reference Books 1 1 Data Structures and Algorithms: https://ece.uwaterloo.ca/~dwharder/aads/Lecture_materials/: University of waterloo 2 2. C Programming Absolute Beginner's Guide (3rd Edition) by Greg Perry, Dean Miller 3 3. <td>Expected Cours</td> <td>e Outcome:</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td>	Expected Cours	e Outcome:								
Introduction to data structures, Array, Linked List, Stack, Queue, Trees. Module:2 Algorithms 15 hour Introduction to Algorithms, Searching Algorithms, Sorting Algorithms, Greedy Algorithm, Divid and Conquer, Analysis of Algorithm. Module:3 C Programming 10 hour Introduction to C, Execution and Structure of a C Program, Data Types and Operators, Control Statements, Looping, Arrays, Structure, Pointers, Memory Management in C, Functions Module:4 C++ Programming 5 hour Introduction to C++, Need for OOP, Class & Objects, Create C++ & Java class and show th similarity Encapsulation, Access Specifiers, Relationship, Polymorphism, Exception Handling, Abstrac Classes. 5 hour Module:5 JAVA 5 hour Introduction to Java, Data Types and Operators, Control Statements, Looping, Arrays, Need for OOF Class & Objects, Create C++ & Java class and show the similarity Encapsulation, Access Specifiers 5 hour Introduction to Java, Data Types and Operators, Control Statements, Looping, Arrays, Need for OOF Class & Objects, Create C++ & Java class and show the similarity Encapsulation, Access Specifiers 5 hour Introduction to Java, Data Types and Operators, Control Statements, Looping, Arrays, Need for OOF Class & Objects, Create C++ & Java class and show the similarity Encapsulation, Access Specifiers 5 hours Reference Books 1 Data Structures and Algorithms: https://ecc.uwaterloo.ca/~dwharder/aad	1. Clear knowled	ge about problem sol	ving skills in DS &	Algorithm	ns concep	ts				
Introduction to data structures, Array, Linked List, Stack, Queue, Trees. Module:2 Algorithms 15 hour Introduction to Algorithms, Searching Algorithms, Sorting Algorithms, Greedy Algorithm, Divid and Conquer, Analysis of Algorithm. Module:3 C Programming 10 hour Introduction to C, Execution and Structure of a C Program, Data Types and Operators, Control Statements, Looping, Arrays, Structure, Pointers, Memory Management in C, Functions Module:4 C++ Programming 5 hour Introduction to C++, Need for OOP, Class & Objects, Create C++ & Java class and show th similarity Encapsulation, Access Specifiers, Relationship, Polymorphism, Exception Handling, Abstrac Classes. 5 hour Module:5 JAVA 5 hour Introduction to Java, Data Types and Operators, Control Statements, Looping, Arrays, Need for OOF Class & Objects, Create C++ & Java class and show the similarity Encapsulation, Access Specifiers 5 hour Introduction to Java, Data Types and Operators, Control Statements, Looping, Arrays, Need for OOF Class & Objects, Create C++ & Java class and show the similarity Encapsulation, Access Specifiers 5 hour Introduction to Java, Data Types and Operators, Control Statements, Looping, Arrays, Need for OOF Class & Objects, Create C++ & Java class and show the similarity Encapsulation, Access Specifiers 5 hours Reference Books 1 Data Structures and Algorithms: https://ecc.uwaterloo.ca/~dwharder/aad										
Module:2 Algorithms 15 hour Introduction to Algorithms, Searching Algorithms, Sorting Algorithms, Greedy Algorithm, Divid and Conquer, Analysis of Algorithm. 10 hour Module:3 C Programming 10 hour Introduction to C, Execution and Structure of a C Program, Data Types and Operators, Control Statements, Looping, Arrays, Structure, Pointers, Memory Management in C, Functions 10 hour Module:4 C++ Programming 5 hour Introduction to C++, Need for OOP, Class & Objects, Create C++ & Java class and show th similarity Encapsulation, Access Specifiers, Relationship, Polymorphism, Exception Handling, Abstract Classes. 5 hour Module:5 JAVA 5 hour Introduction to Java, Data Types and Operators, Control Statements, Looping, Arrays, Need for OOF Class & Objects, Create C++ & Java class and show the similarity Encapsulation, Access Specifiers Relationship, Polymorphism, Exception Handling, Abstract Classes, Interfaces. Vellore Institute of Technology (Deemed to be University under section 3 of UGC Act, 1956)

Course Code	Course Title	L	Т	Р	J	C
STS3007	Preparedness for Career Opportunities	3	0	0	0	1
Pre-requisite	NIL	Syll	abus	versi	on	1.0
Course Objectiv	es:					
1. To enrich	the logical thinking ability for better analysis and decision r	naking	5			
2. To hone t	he competence in solving problems and reasoning skills					
3. To build a	good vocabulary and use it in effective communication					
Expected Cours	e Outcome:					
1. Students w	ill be able to solve mathematical, reasoning and verbal ques	stionna	aires			
Module:1	Quantitative Ability			15	hour	5
Time and Work,	Time Speed and Distance, Number System, Equations, Pe	ercenta	ages, I	Profit	and	Loss,
Permutation and	Combination, Probability, Geometry and Mensuratio	n, Av	verage	s, Pr	ogres	sion,
Allegations and M	fixtures, Ages					
Module:2	Reasoning Ability	12 hour				
Data Arrangeme	nt - Linear, Circular and Cross Variable Relationship	o, Da	ta Su	fficie	ncy,	Data
Interpretation-Ac	vanced Interpretation Tables, Coding and Decoding, Abst	ract R	eason	ing, Iı	nput	Туре
Diagrammatic Re	asoning, Spatial Reasoning, Cubes, Clocks and Calendar					
Module:3 Vo	erbal Ability			18 1	hour	3
Vocabulary Buil	8					
	onyms, One word substitutes, Word Pairs, Spellings, Idiom	s, Sen	tencec	ompl	etion	,
Analogies, Cloze						
Comprehension	-					
0 1	ension Para, Jumbles					
	g: Premise and Conclusion, Assumption & Inference, Stren	gtheni	ng &	Weak	ening	; an
Argument.						
Sentence Correc						
. 1	lism, Verb time sequences, Comparison, Determiners.					
Building person						
	ning a logophile, Etymology – Root words, Prefix and suffi	х.

Course Code	Course Title	L	Τ	Р	J	C
STS3101	Introduction to Programming Skills	3	0	0	0	1
Pre-requisite	NIL	Sylla	bus v	versi	on	1.0
Course Objectiv	es:					
•	nslate vast data into abstract concepts and to understand JA'	VA con	cepts			
2. To have a cle	ar understanding of subject related concepts					
3. To develop c	omputational ability in Java programming language					
Expected Cours						
	edge about problem solving skills in JAVA concepts					
2. Students will	be able to write codes in Java					
Module:1	Object and Class, Data types				8 ł	ours
Types of program	-					
	functional programming					
Class & Objects						
Attributes						
Methods						
Objects						
8	sed on Objects and Classes					
0,1	estions based on encapsulation					
Solving frequently	v asked object-based questions					
Data types						
Data						
Why data type						
Variables						
Available data typ	es Numeric – int, float, doubleCharacter – char, string					
Solving MCQs ba	sed on type casting, data typesSolving debugging based MC	Qs				
Module:2	Basic I / O, Decision Making, Loop Control				8 ł	nours
Printing						_
Getting input from	n user during run time					
Command line ar	guments					
01 0	ning questions based on CLA					
Solving MCQs qu	lestions based on CLA					
Need for contro	l statement					
ifelse						
ifelse ifelse						
Nested ifelse						
Switch case						
	es with control statements (like using = instead of ==)					
Solving frequently	vasked questions on decision making					

Types of looping statements
Entry Controlled
For
While
Exit Controlled
do while
break and continue
Demo on looping
Common mistakes with looping statements (like using; at the end of the loop)
Solving pattern programming problems, series problems
Solving predict the output questions
Module:3String, Date, Array10 hours
String handling, data handling
Solving problems based on arrays like searching, sorting, rearranging, iteration)
Multi-dimensional arrays
Solving pattern problems using 2D arrays
Real time application based on 2D arrays
Module:4Inheritance, Aggregation & Associations12 hours
Need - Is A – Inheritance
Types of inheritance supported - Diagrammatic representation - Demo on inheritance
Has A – Aggregation - Diagrammatic representation - Demo on aggregation
Uses A - Association - Diagrammatic representation - Demo on association
Assignment on relationships - Solving MCQs based on relationships between classes
Module:5 Modifiers, Interface & Abstract classes (Javaspecific), Packages 7 hours
Types of access specifiers
Demo on access specifiers
Assignment on access modifiers
Instance Members
Solving MCQs based on modifiers
Abstract Classes : Need - Abstract Classes - Abstract Methods
Interfaces
Assignment on abstract classes and interface
Need for packages - Access specifiers & packages- Import classes from other packages
Total Lecture hours 45 hours

Recommended by Board of Studies					
Approved by Academic Council	No. 53	Date	13.12.	2018	

Course Code	e Course Title	L	Т	Р	J	C
STS5002	Preparing for Industry	3	0	0	0	1
Pre-requisi	te	Syllab	us vers	sion	2	2.0
Course Obje	ctives:				•	
1. To dev	velop the students' logical thinking skills					
2. To lea	rn the strategies of solving quantitative ability problems					
	rich the verbal ability of the students					
	hance critical thinking and innovative skills					
Expected Co	ourse Outcome:					
	g students to simplify, evaluate, analyze and use functions and	d express	sions to	simu	late	real
	ns to be industry ready.	1				
Module:1	Interview skills - Types of interview and Techniques	to face	e remo	ote	3 ho	urs
	interviews and Mock Interview					
Structured an	nd unstructured interview orientation, Closed questions	and hyp	othetic	al qu	estic	ons,
Interviewers'	perspective, Questions to ask/not ask during an interview,	Video i	ntervie	w, Ro	ecor	ded
feedback, Pho	one interview preparation, Tips to customize preparation for	persona	ıl interv	view, 1	Prac	tice
rounds						
Module:2	Resume skills - Resume Template and Use ofpower ver	bs and T	Гуреs	of	2 ho	urs
	resume and Customizing resume					
Structure of	a standard resume, Content, color, font, Introduction to	Power v	verbs a	nd W	rite	up,
Quiz on typ	es of resume, Frequent mistakes in customizing resum	e, Layou	ut – l	Jnder	stanc	ling
different com	pany's requirement, Digitizing career portfolio					
Module:3	Emotional Intelligence - L1 – TransactionalAnalysis and	d Brain	stormi	ng 1	2 ho	urs
	and Psychometric Analysis and Rebus Puzzles/Problem	Solving	5			
Introduction,	Contracting, ego states, Life positions, Individual Brainston	ming, G	roup P	Brainst	orm	ing,
Stepladder Te	echnique, Brain writing, Crawford's Slip writing approach,	Reverse	brains	tormi	ng,	Star
bursting, Cha	arlette procedure, Round robin brainstorming, Skill Test,	Persona	lity Te	st, Mo	ore t	han
one answer, U	Jnique ways					
Module:4	Quantitative Ability-L3 – Permutation- Combinations	and Pr	obabil	ity 1	4 ho	urs
	and Geometry and mensuration and Trigonometry and	Logarit	hms a	nd		
	Functions and QuadraticEquations and Set Theory					
Counting, C	Grouping, Linear Arrangement, Circular Arrangements	, Cond	itional	Pro	babil	ity,
Independent	and Dependent Events, Properties of Polygon, 2D & 3D	Figures	, Area	& V	olun	ies,
0	distances, Simple trigonometric functions, Introduction to	0				
	Introduction to functions, Basic rules of functions,				uadr	atic
Equations, Ru	iles & probabilities of Quadratic Equations, Basic concepts of	f Venn D)iagram	1		
Module:5	Reasoning ability-L3 – Logical reasoning andData Anal	lysis and	1	T	7 ho	urs
	Interpretation					
Syllogisms, H	Binary logic, Sequential output tracing, Crypto arithmet	ic, Data	ı Suffi	ciency	, D	ata
interpretation	-Advanced, Interpretation tables, pie charts & bar chats

Pre-requisite	Less than 50% EPT score		5	Syllab	us V	ersion
						1
Course Object	ives:					
1. To equip le	earners with English grammar and its application.					
2. To enable	learners to comprehend simple text and train them to speal	k and	write	flawle	ssly.	
3. To familia	rize learners with MTI and ways to overcome them.					
Expected Cou	rse Outcome:					
1. Develop th	ne skills to communicate clearly through effective grammar,	pron	uncia	tion a	nd wi	iting.
1	d everyday conversations in English	1				U
3. Communio	cate and respond to simple questions about oneself.					
	ocabulary and expressions.					
5. Prevent M	TI (Mother Tongue Influence) during usual conversation.					
Module:1	Essentials of grammar				3]	Hours
	ic grammar-Parts of Speech					
	nar worksheets on parts of speech					
Module:2	Vocabulary Building				3]	Hours
	elopment; One word substitution					
•	ntary vocabulary exercises					
Module:3	Applied grammar and usage				4]	Hours
Types of senter						
	nar worksheets on types of sentences; tenses					
Module:4	Rectifying common errors in everyday conversation				4]	Hours
Detect and rect	ify common mistakes in everyday conversation		1			
Activity: Comm	on errors in prepositions, tenses, punctuation, spelling and	other	: parts	of sp	eech;	
Colloquialism						
Module :5	Jumbled sentences				2]	Hours
Sentence struct	ure; Jumbled words to form sentences; Jumbled sentences t	o for	n par	agrapl	n/ sh	ort
story			1	0 1	,	
Activity: Unscra	umble a paragraph / short story					
Module:6	Text-based Analysis				4]	Hours
Wings of Fire -Au	itobiography of APJ Abdul Kalam (Excerpts)					
0 5	vocabulary by reading and analyzing the text					
Activity: Enrich					31	Hours
Module:7	Correspondence				51	
Module:7	Correspondence opplication Writing				51	
Module:7 Letter, Email, A						
Module:7 Letter, Email, A Activity: Comp	Application Writing					Hours

Module:9	Speaking to Convey	6 Hours
Self-introduc	tion; role-plays; Everyday conversations	
	ntify and communicate characteristic attitudes, values, and talents; Wor	king and
interacting w	ithin groups
