

School of Computer Science and Engineering

CURRICULUM AND SYLLABI

(2022-2023)

M.Tech (CSE) - Specialization in Information Security

School of Computer Science and Engineering

M.Tech (CSE) - Specialization in Information Security

CURRICULUM AND SYLLABUS

(2022-23 Admitted Students)

VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

Transforming life through excellence in education and research.

MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

World class Education: Excellence in education, grounded in ethics and critical thinking, for improvement of life.

Cutting edge Research: An innovation ecosystem to extend knowledge and solve critical problems.

Impactful People: Happy, accountable, caring and effective workforce and students.

Rewarding Co-creations: Active collaboration with national & international industries & universities for productivity and economic development.

Service to Society: Service to the region and world through knowledge and compassion.

VISION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

To be a world-renowned centre of education, research and service in computing and allied domains.

MISSION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

- To offer computing education programs with the goal that the students become technically competent and develop lifelong learning skill.
- To undertake path-breaking research that creates new computing technologies and solutions for industry and society at large.
- To foster vibrant outreach programs for industry, research organizations, academia and society.

School of Computer Science and Engineering

M.Tech (CSE) - Specialization in Information Security

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- 1. Graduates will be engineering professionals who will engage in technology development and deployment with social awareness and responsibility.
- 2. Graduates will function as successful practising engineer / researcher / teacher / entrepreneur in the chosen domain of study.
- 3. Graduates will have holistic approach addressing technological, societal, economic and sustainability dimensions of problems and contribute to economic growth of the country.

M. Tech Computer Science and Engineering Specialization in Information Security

PROGRAMME OUTCOMES (POs)

- PO_01: Having an ability to apply mathematics and science in engineering applications.
- PO_03: Having an ability to design a component or a product applying all the relevant standards and with realistic constraints, including public health, safety, culture, society and environment
- PO_04: Having an ability to design and conduct experiments, as well as toanalyze and interpret data, and synthesis of information
- PO_05: Having an ability to use techniques, skills, resources and modern engineering and IT tools necessary for engineering practice
- PO_06: Having problem solving ability- to assess social issues (societal, health, safety, legal and cultural) and engineering problems
- PO_07: Having adaptive thinking and adaptability in relation to environmental context and sustainable development
- PO_08: Having a clear understanding of professional and ethical responsibility
- PO_11: Having a good cognitive load management skills related to project management and finance

School of Computer Science and Engineering M.Tech (CSE) - Specialization in Information Security

PROGRAMME SPECIFIC OUTCOMES (PSOs)

- 1. The ability to design and develop computer programs/computer-based systems in the advanced level of areas including algorithms design and analysis, networking, operating systems design etc.
- 2. The ability to investigate and analyze using appropriate methodologies as well as security principles and apply ethically acceptable security solutions to mitigate cyber security threats.
- 3. Ability to bring out the capabilities for research and development in contemporary issues and to exhibit the outcomes as technical report.

M. Tech Computer Science and Engineering Specialization in Information Security

Pre-requisite	NIL	Syll	abus	ver	sion
				V.	. 1.0

- 1. To familiarize the concepts of data structures and algorithms focusing on space and time complexity.
- 2. To provide a deeper insight into the basic and advanced data structures.
- 3. To develop the knowledge for the application of advanced trees and graphs in real- world scenarios.

Course Outcomes

After completion of this course, the student shall be able to:

- 1. Understand and analyze the space and time complexity of the algorithms.
- 2. Identification of suitable data structure for a given problem.
- 3. Implementation of graph algorithms in various real-life applications.
- 4. Implementation of heaps and trees for querying and searching.
- 5. Use of basic data structures in advanced data structure operations.
- 6. Use of searching and sorting in various real-life applications.

Module:1 **Growth of Functions** 3 hours Overview and importance of algorithms and data structures- Algorithm specification, Recursion, Performance analysis, Asymptotic Notation - The Big-O, Omega and Theta notation, Programming Style, Refinement of Coding - Time-Space Trade Off, Testing, Data Abstraction. Module:2 **Elementary Data Structures** 6 hours Array, Stack, Queue, Linked-list and its types, Various Representations, Operations & Applications of Linear Data Structures Sorting and Searching Module:3 7 hours Insertion sort, merge sort, sorting in linear Time-Lower bounds for sorting, Radix sort, Bitonic sort, Cocktail sort, Medians and Order Statistics-Minimum and maximum, Selection in expected linear time, Selection in worst-case linear time, linear search, Interpolation search, Exponential search. Module:4 Trees 6 hours Binary trees- Properties of Binary trees, B-tree, B-Tree definition- Operations on B-Tree: Searching a Btree, Creating, Splitting, Inserting and Deleting, B+-tree. Module:5 **Advanced Trees** 8 hours Threaded binary trees, Leftist trees, Tournament trees, 2-3 tree, Splay tree, Red-black trees, Range trees. Module:6 Graphs 7 hours Representation of graphs, Topological sorting, Shortest path algorithms- Dijkstra's algorithm, Floyd-Warshall algorithm, Minimum spanning trees - Reverse delete algorithm, Boruvka's algorithm. Module:7 Heap and Hashing 6 hours Heaps as priority queues, Binary heaps, binomial and Fibonacci heaps, Heaps in Huffman coding, Extendible hashing. **Contemporary Issues** Module:8 2 hours **Total Lecture hours:** 45 hours

- 1. To provide knowledge on the basics of computer architectures and organization that lays the foundation to study high-performance architectures
- 2. To design and develop parallel programs using parallel computing platforms such as OpenMP, CUDA
- 3. To evaluate the performance using profiling tools and optimize parallel codes using various optimization techniques

Course Outcomes

After completion of this course, the student shall be able to:

- 1. Outline the developments in the evolution of computer architectures and parallel programming paradigms
- 2. Comprehend the various programming languages and libraries for parallel computing platforms
- 3. Use of profiling tools to analyze the performance of applications by interpreting the given data
- 4. Evaluate efficiency trade-offs among alternative parallel computing architectures for an efficient parallel application design
- 5. Develop parallel programs using OpenMP and CUDA and analyze performance parameters such as speed-up, and efficiency for parallel programs against serial programs

Module:1 Computer Evolution And Performance

5 hours

Defining Computer Architecture and Organization, Overview of Computer Components, Von Neumann architecture, Harvard Architecture CISC & RISC, Flynn's Classification of Computers, Moore's Law, Multi-threading, Comparisons of Single Core, Multi Processors, and Multi-Core architectures, Metrics for Performance Measurement

Module:2 Memory Hierarchy

8 hours

Key Characteristics of Memory systems, Memory Hierarchy, Cache Design policies, Cache Performance, Cache Coherence, Snoopy Protocols, Cache coherence protocols, MSI, MESI, MOESI

Module:3 | Parallel Computers

8 hours

Instruction Level Parallelism(ILP), Compiler Techniques for ILP & Branch Prediction, Thread Level Parallelism (TLP), Threading Concepts, Shared Memory, Message Passing, Vectorization

Module:4 Multithreaded Programming using OpenMP

7 hours

Introduction to OpenMP, Parallel constructs, Runtime Library routines, Work-sharing constructs, Scheduling clauses, Data environment clauses, atomic, master Nowait Clause, Barrier Construct

Module:5 | Programming for GPU

6 hours

Introduction to GPU Computing, CUDA Concepts, CUDA Programming Model, Program Structure of CUDA & Execution, Methods for operations on Device Memory, Thread Organization, Examples

Module:6 | Performance Analyzers

6 hours

Performance Evaluation, performance bottlenecks, Profiling categories; Profiling tools: Trace analyzer and collector (ITAC), VTune Amplifier XE, Energy Efficient Performance, Integrated Performance Primitives (IPP)

Mo	dule:7 Energy Efficient Architectures	5 hours					
Ove	erview of power issues, CMOS Device-level Power dissipation basics, S	Sources of energy					
Cor	sumption, Strategies to save power or Energy, Low power designs, Power mana	gement techniques

Course code Course title				L	T	P	C
MCSE504L	MCSE504L OPERATING SYSTEMS		3	0	0	3	
Pre-requisite	Nil			Sylla	abus	s ver	sion
Î			-		V	. 1.0	
Course Objectives							

- 1. To focus the core functionalities required to develop and manage operating systems.
- 2. To encompass process management, synchronization strategies, memory management, file systems, device management, and virtualization.
- 3. To introduce the concepts and features of real-time operating systems as well as virtualization.

Course Outcomes

After completion of this course, the student shall be able to:

- 1. Understand the fundamental operating system abstractions, including processes, threads, semaphores, and file systems.
- 2. Implement scheduling, devising and addressing synchronization issues.
- 3. Gain an understanding of memory management tasks.
- 4. Develop real-time working prototypes of different small-scale and medium-scale embedded systems.
- 5. Comprehend the basics of virtualization and differentiate types of virtualization.

Introduction to Operating Systems Module:1

4 hours

Computer Organization and Architecture - OS definition - OS history - OS Operations - OS design issues - Operating systems structures - Library files - Systems calls - Interrupts - Kernel approaches -Building and booting an OS.

Process and Scheduling Module:2

Process states – State transitions with suspend and resume - Process control block - Context-switching -Processes operations - Process scheduling - CPU scheduling: Non-preemptive, preemptive - Multi-queue scheduling - Multi-level feedback queue scheduling.

Module:3 Synchronization

9 hours

IPC: Shred memory, message passing - Race condition - Critical section problem - Peterson's solution -Bakery Algorithm - Mutex locks - Semaphores - Classical synchronization problems - Monitors -Thread synchronization – Multi-threading Models, Deadlocks – Resource allocation graphs – Deadlock: prevention, avoidance, detection and recovery.

Module:4 | Memory Management

5 hours

Address binding – Fragmentation - Pinning Memory – Paging – Structure of the page table – Swapping - Segmentation - Demand Paging - Copy-on-write - Replacement - Thrashing - Working set - Memory compression – Allocating kernel memory.

Managing Devices, Files, Security and Protection Module:5

9 hours

I/O Management – DMA - Delayed write - Disk scheduling algorithms: Seek-time and rotational latency based - File control block - Inode - Access method - Directory structure - Directory implementation -File allocation methods - Free space management - Program and network threats - Cryptography as a security tool – Domains of protection – Access matrix – Capability based systems

Real-time Operating Systems Module:6

5 hours

RTOS Internals - Real-Time Scheduling - Task Specifications - Performance Metrics of RTOS -Schedulability Analysis – RTOS Programming Tools.

Module:7 Virtualization

5 hours

Need for virtualization - Virtual machines and architectures – Hypervisors - Virtualization Technologies: Para Virtualization, Full Virtualization - Virtualization types: Server virtualization, Application virtualization, Storage virtualization.

Module:8	Contemporary	Issues

	McGraw-Hill Education.					
3.	Portnoy, M, "Virtualization Essentia	ls", 2012, 2 nd Editi	on, John V	Wiley & Sons, New Jersey, USA.		
Mode of Evaluation: CAT / Written Assignment / Quiz / FAT						
Rec	Recommended by Board of Studies 26-07-2022					
App	Approved by Academic Council No. 67 Date 08-08-2022					

Course code Course title				P	C
MCSE504P OPERATING SYSTEMS LAB				2	1
Pre-requisite Nil			abu	s ver	sion
				V	. 1.0

- 1. To encompass process management, synchronization strategies, memory management, file systems, device management, and virtualization.
- 2. To introduce the concepts and features of real-time operating systems as well as virtualization.

Course Outcome

After completion of this course, the student shall be able to:

- 1. Implement scheduling, devising and addressing synchronization issues.
- 2. Gain an understanding of memory management tasks.
- 3. Develop real-time working prototypes of different small-scale and medium-scale embedded systems.
- 4. Comprehend the basics of virtualization and differentiate types of virtualization.

Indi	cative Experiments					
1.	Investigate the fundamental Unix/Linux commands.					
2.	Obtaining the OS system data file and its associated information.					
3.	Shell Programming.					
4.	Create utility programs that use I/O system calls to simulate operations such as ls, cp, grep, and others.					
5.	Create child, Orphan and Zombie processes using suitable system calls such as fork(), exec(), wait(), kill(), sleep() and exit() system calls.					
6.	Create a program that mimics the CPU Scheduling algorithms including multi-level queue scheduling algorithm. Ex: Assume that all processes in the system are divided into two categories: system processes and user processes. System processes are to be given higher priority than user processes. Use FCFS scheduling for the processes in each queue.					
7.	Implement the deadlock-free solution to Dining Philosophers problem using Semaphore.					
8.	Simulation of Bankers algorithm to check whether the given system is in safe state or not. Also					
	check whether addition resource requested can be granted immediately.					
9.	Parallel Thread management using Pthreads library. Implement a data parallelism using multi-threading. Ex: An application should have a thread created with synchronization and thread termination. Every thread in the sub-program must return the value and must be synchronized with the main function. Final consolidation should be done by the main (main function).					
10.	Dynamic memory allocation algorithms – First-fit, Best-fit, Worst-fit algorithms.					
11.	Page Replacement Algorithms FIFO, LRU and Optimal					
12.						
13.	i c					
14.	Virtualization Setup: Type-1, Type-2 Hypervisor (Detailed Study Report).					
	Total Laboratory Hours 30 hours

Pre-requisite NIL		Syll	abus	ver	sion
				V	. 1.0

- 1. To introduce the computer network concepts and provide skills required to trouble shoot the network devices.
- 2. To describe the basic knowledge of VLAN.
- 3. To develop the knowledge for application of software defined networks.

Course Outcome

After completion of this course, the student shall be able to:

- 1. Understand the types of network cables and practical implementation of cross-wired and straight through cable.
- 2. Design and implementation of VLAN.
- 3. Analyze and apply network address translation using packet tracer and network simulators.
- 4. Design and develop software defined networks.

Indic	ative Experiments
1.	Hardware Demo(Demo session of all networking hardware and Functionalities)
	OS Commands(Network configuration commands)
2.	Error detection and correction mechanisms
	Flow control mechanisms
3.	IP addressing Classless addressing
4.	Network Packet Analysis using Wireshark
	i. Packet Capture Using Wire shark
	ii. Starting Wire shark
	iii. Viewing Captured Traffic
	iv. Analysis and Statistics & Filters.
5.	Socket programming(TCP and UDP) Multi client chatting
6.	Networking Simulation Tool –Wired and Wireless
7.	SDN Applications and Use Cases
8.	Security in Network- Use cases
9	Performance evaluation of routing protocols using simulation tools.

Course code	Course title				C
MCSE506P	P DATABASE SYSTEMS LAB				1
Pre-requisite NIL			abus	ver	sion
		v. 1.		. 1.0	

- 1. To understand the underlying principles of Relational Database Management System.
- 2. To focus on the modeling and design of secure databases and usage of advanced data models.
- 3. To implement and maintain the structured, semi structured and unstructured data.

Course Outcome

After completion of this course, the student shall be able to:

- 1. Construct database queries using Structured Query Language (SQL)
- 2. Design and implement applications that make use of distributed fault-tolerant databases.
- 3. Apply Spatial and Multimedia Database concepts to solve real-world problems.
- 4. Implement applications that work with structured, semi-structured, and unstructured databases
- 5. Create applications that use cloud storage technologies and relevant distributed file systems

Indicative Experiments

- 1. Study of Basic SQL Commands.
 - Model any given scenario into ER/EER Model
- 2. Table creation with constraints, alter schema, insert values, aggregate functions, simple and complex queries with joins, Views, Subqueries.
- 3. PL/SQL-Procedures, Cursors, Functions, Triggers
- 4. Partition a given database based on the type of query and compares the execution speed of the query with/without parallelism.
- 5. Create a distributed database scenario, insert values, fragment and replicate the database Query the distributed database
- 6. Consider a schema that contains the following table with the key underlined:

Employee (Eno, Ename, Desg, Dno). Assume that we horizontally fragment the table as follows:

Employee1(Eno; Ename; Desg; Dno), where 1<= Dno <=10 Employee2(Eno; Ename; Desg; Dno), where 11 <= Dno <=20 Employee3(Eno; Ename; Desg; Dno), where 21 <= Dno <=30

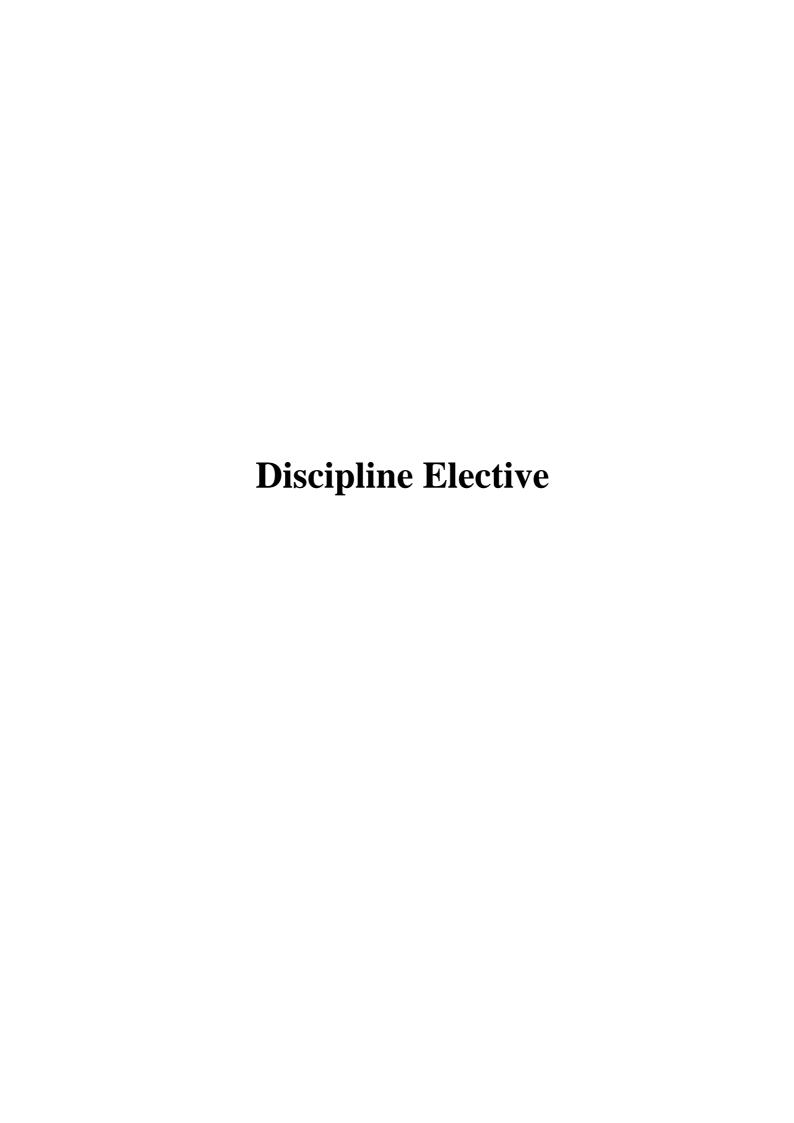

In addition, assume we have 4 sites that contain the following fragments:

- Site1 has Employee1
- Site2 has Employee2
- Site3 has Employee2 and Employee3
- Site4 has Employee1

Implement at least 5 suitable queries on Employee fragments. Add relations to the database as per your requirements.

- 7. Plot points, lines, and polygons using Spatial Databases such as Oracle Spatial, PostgreSQL, Microsoft SQL Server etc
- 8. Use Spatial Databases to store data using Latitude and Longitude, find the distance between two spatial objects, find the area of a polygon
 - Store and retrieve images from a multimedia database
- 9. Create an XML document and validate it against an XML Schema/DTD. Use XQuery to query and view the contents of the database
- 10. Execute XPATH expressions on a database.

11.	Perform the following using a Mon	goDB Database							
	 Create an Employee Collection and insert a few documents (sample document given below for reference) 								
	{ "name" : "Satish", "salary" : 3	30000, "address" : '	"Vellore",	"school" : "SCOPE" }					
	 Display all employees whose 	se address is vellor	e and salar	ry is greater than 30000					
	 Update the salary for an em 	ployee by name 'R	lam' as 40	000					
	 Display only name and sala 	ry for all employee	es in the co	llection					
	 Display all employees who 	are not from 'SCO	PE' schoo	1					
	 Display only documents that 	t contains the addr	ess proper	ty					
12.	Create an application that interacts	with a cloud datab	ase.						
			Total Lal	boratory Hours 30 hours

MCSE611P	Malware Analysis Lab	0 0 2 1
Pre-requisite	Pre-requisite NIL	
		v. 1.0

- 1. To introduce malware taxonomy and life cycle.
- 2. To analyze malware samples using static, dynamic analysis, and reverse engineering techniques.
- 3. To detect and analyze obfuscation and anti-malware techniques.

Course Outcome

After completion of this course, the student shall be able to:

- 1. Explore the anti-malware analysis techniques
- 2. Apply the reverse-engineering of malware and Obfuscation using emerging tools.

Indica	ative Experiments						
1	Disassemble Portable Executable (PE32) Files using PEid and TrID,	3 hours					
	to identify						
	file compilation date						
	• imports/ exports, suspicious strings						
	• run-time effect, procmon filter						
	 hist -based signatures revealing files 						
	 registry keys, processes, services 						
	 network-based signatures 						
2	Static and Dynamic Malware Analysis:	4 hours					
	 Sandboxing the malware using SANDBOX tool: Cuckoo (open source) 						
	Sample Malware analysis Virus Total						
	Registry analysis using Any run						
	Malware analysis via hex code						
3	Reverse-engineering the malware using IDA Pro: strings analysis, local variables,						
	graph mode to cross-references, Analyzing Functions						
4	Debug and Disassemble the malware using OllyDbg: Debug the malware, Viewing	4					
	Threads and Stacks, OllyDbg Code-Execution Options, Breakpoints, Loading DLLs,	hours					
	Exception Handling						
5	MASTIFF is a static analyzer framework (Linux and Mac) with the following	4 hours					
	plugins:						
	 ssdeep: fuzzy hash, or context-triggered piecewise hashes (CTPH) to 						
	identify nearly identical files for identifying variants of a malware family						
	 pdftools: extracts information about PDF files. 						
	 exiftool: This shows info, from image files. 						
	 disitool: extract digital signatures from signed executables. 						
	 pyOLEscanner: extract information from OLE file types, such as Word 						
	documents and Excel spreadsheets						
6	Packing and obfuscation:	3 hours					
	 Pack and unpack the malware: UPX tool 						
	 obfuscation and de-obfuscation of the malware using CFF explorer 						

7	Strings and API Analysis:				4 hours	
	SysInternals Suite's strings: Tl		ine tool for	Windows that	at	
	shows the list of text strings in					
	BinText: This is a GUI-based	Windows tool that	can displa	y the ASCII a	and	
	Unicode text strings for a give	en file.				
	API Monitor: helps reverse en	igineering by moni	toring API	calls as the		
	program runs.					
8	Anti Malware analysis using:				4 hours	
	 WinDbg 					
	 IDA Pro / OllyDBG 					
	SysInternals Suite Tools

Course code	Course title	L	T	P	C
MCSE612L	Cyber Security	3	0	0	3
Pre-requisite	Nil	Syllabus v			sion
				7	1.0
Course Objective	es				
1. To unders	and key terms and concepts in Cyber security, Policies, Governar	nce and	Coı	nplia	ance.
	knowledge to secure corrupted systems, protect personal data, an an Organization.	and sec	ure	com	puter
3. To unders	tand principles of cyber security and to guarantee a secure netwo	ork by	anal	yzin	g the

nature of attacks through cyber forensics software or tools.

Course Outcome

After completion of this course, the student shall be able to:

- 1. Analyze and evaluate the cyber security needs of an organization.
- 2. Analyze the security issues in networks and computer systems to secure an infrastructure.
- 3. Design operational cyber security strategies and policies.
- 4. Apply critical thinking and problem-solving skills to detect current and future attacks on an organization's computer systems and networks.

Module:1 **Introduction to Cyber Security** 6 hours Cyber Security- Layers of security, Vulnerability, Assets and Threat, Challenges and Constraints -Computer Criminals - CIA Triad - Motive of attackers - Spectrum of attacks - Taxonomy of various attacks - Cryptography - Security Governance - Challenges and Constraints, Security Models and Risk Management, Legacy Cyber security systems – Transformations in Cyber security. **Module:2** | Cyber Security Technologies 6 hours

Mobile Security - Advanced Data Security: Cloud Security, IoT Security - Incident detection response - Penetration testing – User Behavior Analytics (UBA) – Endpoint Detection and Response (EDR).

Vulnerabilities and Safeguards Module:3

6 hours

Software Vulnerabilities - Complex Network Architectures, Open Access to Organizational Data, Weak Authentication, poor cyber security awareness - Cyber Security Safeguards - Overview, Access control, Audit, Authentication, Biometrics, Deception, Denial of Service Filters, Ethical Hacking, Firewalls, Scanning, Security policy, Threat Management, Defending malicious software, Applying software update and patches.

Module:4 | Securing Infrastructure and Local Host

7 hours

Infrastructure security in the real world and challenges – Understanding access control and monitoring systems: Access control security policies, Physical security controls – Intrusion detection and Reporting systems - Securing host device and challenges - Protecting the inner perimeter - Protecting remote access: Local protection tools, local intrusion detection tools, configuring browser security, Hardening operating systems.

Module:5 **Cyber Security Tools** 6 hours Zenmap – Hydra –Kismet – John the Ripper – Airgeddon – Deauther Board – Aircrack-ng – EvilOSX. **Cyber Security Strategies** Module:6 Need for building cyber strategy – Cyber-attack strategies (Red team) – Cyber defense strategies (blue team) - Introduction to Cyber security kill chain - Reconnaissance - Weaponization - Privilege Escalation - Exfiltration - Threat Life cycle management phases.

Cybercrime Challenges Module:7

6 hours

Challenges of fighting cybercrime- Opportunities, general challenges, and legal challenges - Capacity building- Cyber security and cybercrime: Capacity building methodology, Strategy as a starting point, the relevance of policy, the role of regulators in fighting cybercrime, high standards in developing countries.

Module:8	Contemporary Issues	2 hours
	Total Lecture hours:	45 hours

Pre-requisite	<u> </u>	Syl	llab	us ve	ersion
					v.1.0

- 1. To understand the basics of digital forensics technology, systems and services.
- 2. To learn about data recovery, data seizure, digital evidence controls and forensics analysis.
- 3. To learn and develop different tools for digital forensic acquisition and analysis.

Course Outcomes

After completion of this course, the student shall be able to:

- 1. Learn the fundamentals of digital forensics technology along with different systems and services.
- 2. Recover and seize data from a crime scene without damage, using legal procedures and standards.
- 3. Exhibit knowledge in forensic data acquisition and analysis and investigate artifacts in different operating systems.
- 4. Apply forensics tools and concepts on modern frameworks such as network, email, smart phones, cloud and social media.

Module:1 Introduction to Digital Forensics

6 hours

Digital forensics fundamentals: Use of Computer Forensics - Benefits of Professional Forensics Methodology - Steps Taken by Computer Forensics Specialists - Case Studies - Types of Computer Forensics Technology: Military, Law Enforcement, Business - Specialized Forensics Techniques - Hidden Data and How to Find It - Protecting Data from Being Compromised - Internet Tracing Methods.

Module:2 | Digital Forensics Systems and Services

6 hours

Types of Computer Forensics Systems: Firewall and IDS Security Systems - Storage Area Network Security Systems - Instant Messaging (IM) Security Systems - Biometric Security Systems - Computer Forensics Services: Occurrence of Cyber Crime - Cyber Detectives - Fighting Cyber Crime with Risk Management Techniques - Computer Forensics Investigative Services - Forensic Process Improvement.

Module:3 | Digital Forensics Evidence and Capture

6 hours

Data Recovery: Data Backup and Recovery, Data-Recovery Solution, Hiding and Recovering Hidden Data - Evidence Collection and Data Seizure: Collection of Evidence and Options, Obstacles - Types of Evidence - The Rules of Evidence - Volatile Evidence - Volatile Memory Forensics- Controlling Contamination: The Chain of Custody, Reconstructing the Attack.

Module:4 | Data Preservation and Forensics Analysis

7 hours

Duplication and Preservation of Digital Evidence: Preserving the Digital Crime Scene - Computer Evidence Processing Steps - Legal Aspects of Collecting and Preserving Evidence - Computer Image Verification and Authentication - Computer Forensics Analysis: Discovery of Electronic Evidence - Identification of Data - Reconstructing Past Events - disk and file system analysis.

Module:5 | Network and Operating System Forensics

6 hours

Network forensics: Investigation on virtual network and Email, Internet Artifacts - Damaging Computer Evidence - System Testing - Operating System Artifacts: Windows System Artifacts, Linux System Artifacts.

Module:6 | **Mobile and Cloud Forensics**

6 hours

Mobile Forensics: Acquisition Procedures for Mobile, Equipment, Tools, Internet of Anything - Cloud Forensics: Service Levels, cloud vendors, Legal Challenges and Technical Challenges, Acquisition, Investigation, Tools: Open-Stack, F-Response, AXIOM.

Module:7	Forensics Tools	6 hours							
Open sour	Open source tools: The Sleuth Kit (TSK) and Autopsy - SANS SIFT Investigative tool - Voltality -								
CAINE in	vestigative environment - windows System internals-Commercial	tools: Encase, FTK, PRO							
Discover	Basic, Nirsoft.								
Module:8	Contemporary Issues	2 hours							
	TD 4 1 X 4 1	45.1							
	Total Lecture hour	s: 45 hours
