(Deemed to be University under section 3 of UGC Act, 1956)

## **VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY**

Transforming life through excellence in education and research.

## **MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY**

**World class Education:** Excellence in education, grounded in ethics and critical thinking, for improvement of life.

**Cutting edge Research:** An innovation ecosystem to extend knowledge and solve critical problems.

**Impactful People:** Happy, accountable, caring and effective workforce and students.

**Rewarding Co-creations:** Active collaboration with national & international industries & universities for productivity and economic development.

**Service to Society:** Service to the region and world through knowledge and compassion.

## **VISION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING**

To be a world-renowned centre of education, research and service in computing and allied domains.

## **MISSION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING**

- To offer computing education programs with the goal that the students become technically competent and develop lifelong learning skill.
- To undertake path-breaking research that creates new computing technologies and solutions for industry and society at large.
- To foster vibrant outreach programs for industry, research organizations, academia and society.

**VIT**<sup>®</sup>  
Vellore Institute of Technology  
(Deemed to be University under section 3 of UGC Act, 1956)

## **School of Computer Science and Engineering**

### **M.Tech (CSE) – (Data Science) – 5 year Integrated**

#### **PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)**

1. Graduate will acquire fundamental knowledge and expertise essential for professional practice in computer engineering.
2. Graduates will use suitable principle, hypothesis, mathematics and computational technology to analyze and solve problems encountered in the applications of computer systems.
3. Graduates will own a professional attitude as an individual or a team member with contemplation for society, professional ethics, environmental factors and motivation for lifelong learning.
4. Graduates will communicate, using oral, written and computer based communication technology, as well as function effectively as an individual and a team member in professional environment.
5. Graduates will realise the local, national and global issues related to the growth and applications of computer systems and to be solicitous of the impact of these issues on different cultures.

**VIT**<sup>®</sup>  
Vellore Institute of Technology  
(Deemed to be University under section 3 of UGC Act, 1956)

## **M. Tech Computer Science and Engineering (Data Science) 5-Year Integrated**

### **PROGRAMME OUTCOMES (POs)**

PO\_1 Having an ability to apply mathematics and science in engineering applications

PO\_2 Having a clear understanding of the subject related concepts and of contemporary issues

PO\_3 Having an ability to design a component or a product applying all the relevant standards and with realistic constraints

PO\_4 Having an ability to design and conduct experiments, as well as to analyze and interpret data

PO\_5 Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice

PO\_6 Having problem solving ability-solving social issues and engineering problems

PO\_7 Having adaptive thinking and adaptability

PO\_8 Having a clear understanding of professional and ethical responsibility

PO\_9 Having cross cultural competency exhibited by working in teams

PO\_10 Having a good working knowledge of communicating in English

PO\_11 Having a good cognitive load management [discriminate and filter the available data] skills

PO\_12 Having interest in lifelong learning

**VIT**<sup>®</sup>  
Vellore Institute of Technology  
(Deemed to be University under section 3 of UGC Act, 1956)

## **School of Computer Science and Engineering**

**M.Tech (CSE) – (Data Science) – 5 year Integrated**

### **PROGRAMME SPECIFIC OUTCOMES (PSOs)**

1. Employ mathematical models with indispensable engineering and scientific principles to unravel solutions for life problems using appropriate data structures and algorithms.
2. Design storage structures to represent huge data and apply artificial statistics and computational analysis for data to predict and represent knowledge.
3. Evaluate the use of data from acquisition through cleansing, warehousing, analytics, and visualization to the ultimate business decision.
4. Utilize the core concepts of computer science and engage in research methods to interpret, process, experiment and conclude the investigations.

**SCHOOL OF COMPUTER SCIENCE AND ENGINEERING**  
**5 Year integrated M.Tech CSE (Data Science)**  
**Curriculum for 2023-2024 Batch**

| <p>1. To emphasize the benefits of object oriented concepts.</p> <p>2.To enable students to solve the real time applications using object oriented programming features</p> <p>3.To improve the skills of a logical thinking and to solve the problems using any processing elements</p>  |  |                               |          |          |          |          |
| <b>Expected Course Outcome:</b>   |  |                               |          |          |          |          |
| <p>1. Demonstrate the basics of procedural programming and to represent the real world entities as programming constructs.</p> <p>2.Enumerate object oriented concepts and translate real-world applications into graphical representations.</p> <p>3.Demonstrate the usage of classes and objects of the real world entities in applications.</p> <p>4.Discriminate the reusability and multiple interfaces with same functionality based features to solve complex computing problems.</p> <p>5.Illustrate possible error-handling constructs for unanticipated states/inputs and to use generic programming constructs to accommodate different datatypes.</p> <p>6.Validate the program against file inputs towards solving the problem..</p> |  |                               |          |          |          |          |
| <b>List of Challenging Experiments (Indicative)</b>   |  |                               |          |          |          |          |
| 1.  | <b>Postman Problem</b><br>A postman needs to walk down every street in his area in order to deliver the mail. Assume that the distances between the streets along the roads are given. The postman starts at the post office and returns back to the post office after delivering all the mails. Implement an algorithm to help the post man to walk minimum distance for the purpose. |                               |          |          |          | 10 hours |
| 2.  | <b>Budget Allocation for Marketing Campaign</b><br>A mobile manufacturing company has got several marketing options such as  |                               |          |          |          | 15 hours |

|    |   |          |
|----|---|----------|
|    | Radio advertisement campaign, TV non peak hours campaign, City top paper network, Viral marketing campaign, Web advertising. From their previous experience, they have got a statistics about paybacks for each marketing option. Given the marketing budget (rupees in crores) for the current year and details of paybacks for each option, implement an algorithm to determine the amount that shall spent on each marketing option so that the company attains the maximum profit.  |          |
| 3. | <p><b>Missionaries and Cannibals</b></p> <p>Three missionaries and three cannibals are on one side of a river, along with a boat that can hold one or two people. Implement an algorithm to find a way to get everyone to the other side of the river, without ever leaving a group of missionaries in one place outnumbered by the cannibals in that place.</p>  | 10 hours |
| 4. | <p><b>Register Allocation Problem</b></p> <p>A register is a component of a computer processor that can hold any type of data and can be accessed faster. As registers are faster to access, it is desirable to use them to the maximum so that the code execution is faster. For each code submitted to the processor, a register interference graph (RIG) is constructed. In a RIG, a node represents a temporary variable and an edge is added between two nodes (variables) t1 and t2 if they are live simultaneously at some point in the program. During register allocation, two temporaries can be allocated to the same register if there is no edge connecting them. Given a RIG representing the dependencies between variables in a code, implement an algorithm to determine the number of registers required to store the variables and speed up the code execution</p>   | 15 hours |
| 5. | <p><b>Selective Job Scheduling Problem</b></p> <p>A server is a machine that waits for requests from other machines and responds to them. The purpose of a server is to share hardware and software resources among clients. All the clients submit the jobs to the server for execution and the server may get multiple requests at a time. In such a situation, the server schedule the jobs submitted to it based on some criteria and logic. Each job contains two values namely time and memory required for execution. Assume that there are two servers that schedules jobs based on time and memory. The servers are named as Time Schedule Server and memory Schedule Server respectively. Design a OOP model and implement the time Schedule Server and memory Schedule Server. The Time Schedule Server arranges jobs based on time required for execution in ascending order whereas memory Schedule Server arranges jobs based on memory required for execution in ascending order</p> | 15 hours |
| 6. | <p><b>Fragment Assembly in DNA Sequencing</b></p> <p>DNA, or deoxyribonucleic acid, is the hereditary material in humans and</p>  | 15 hours |

|  |  |                 |
|--|--|-----------------|
|  | almost all other organisms. The information in DNA is stored as a code made up of four chemical bases: adenine (A), guanine (G), cytosine (C), and thymine (T). In DNA sequencing, each DNA is sheared into millions of small fragments (reads) which assemble to form a single genomic sequence (superstring). Each read is a small string. In such a fragment assembly, given a set of reads, the objective is to determine the shortest superstring that contains all the reads. For example, given a set of strings, 000, 001, 010, 011, 100, 101, 110, 111 the shortest superstring is 0001110100. Given a set of reads, implement an algorithm to find the shortest superstring that contains all the given reads. |                 |
| 7.   | <b>House Wiring</b><br>An electrician is wiring a house which has many rooms. Each room has many power points in different locations. Given a set of power points and the distances between them, implement an algorithm to find the minimum cable required.   | 10 hours        |
| <b>Total Laboratory Hours</b>              |  | <b>90 hours</b> |

Ecosystem, earth – life support system and ecosystem components; Food chain, food web, Energy flow in ecosystem; Ecological succession- stages involved, Primary and secondary succession, Hydrarch, mesarch, xerarch; Nutrient, water, carbon, nitrogen, cycles; Effect of human activities on these cycles.  |   |                               |          |          |          |          |
| <b>Module:2</b>   | <b>Biodiversity</b>   | <b>6 hours</b>                |          |          |          |          |
| Importance, types, mega-biodiversity; Species interaction - Extinct, endemic, endangered and rare species; Hot-spots; GM crops- Advantages and disadvantages; Terrestrial biodiversity and Aquatic biodiversity – Significance, Threats due to natural and anthropogenic activities and Conservation methods.   |   |                               |          |          |          |          |
| <b>Module:3</b>   | <b>Sustaining Natural Resources and Environmental Quality</b> | <b>7 hours</b>                |          |          |          |          |
| Environmental hazards – causes and solutions. Biological hazards – AIDS, Malaria, Chemical hazards- BPA, PCB, Phthalates, Mercury, Nuclear hazards- Risk and evaluation of hazards. Water footprint; virtual water, blue revolution. Water quality management and its conservation. Solid and hazardous waste – types and waste management methods.   |   |                               |          |          |          |          |

|   |   |                 |
|---|---|-----------------|
| <b>Module:4</b>   | <b>Energy Resources</b>   | <b>6 hours</b>  |
| Renewable - Non renewable energy resources- Advantages and disadvantages - oil, Natural gas, Coal, Nuclear energy. Energy efficiency and renewable energy. Solar energy, Hydroelectric power, Ocean thermal energy, Wind and geothermal energy. Energy from biomass, solar-Hydrogen revolution. |   |                 |
| <b>Module:5</b>   | <b>Environmental Impact Assessment</b>  | <b>6 hours</b>  |
| Introduction to environmental impact analysis. EIA guidelines, Notification of Government of India (Environmental Protection Act – Air, water, forest and wild life). Impact assessment methodologies. Public awareness. Environmental priorities in India.                                     |   |                 |
| <b>Module:6</b>   | <b>Human Population Change and Environment</b>  | <b>6 hours</b>  |
| Urban environmental problems; Consumerism and waste products; Promotion of economic development – Impact of population age structure – Women and child welfare, Women empowerment. Sustaining human societies: Economics, environment, policies and education.                                  |   |                 |
| <b>Module:7</b>   | <b>Global Climatic Change and Mitigation</b>  | <b>5 hours</b>  |
| Climate disruption, Green house effect, Ozone layer depletion and Acid rain. Kyoto protocol, Carbon credits, Carbon sequestration methods and Montreal Protocol. Role of Information technology in environment-Case Studies.  |   |                 |
| <b>Module:8</b>   | <b>Contemporary issues</b>  | <b>2 hours</b>  |
| Lecture by Industry Experts   |   |                 |
|   | <b>Total Lecture hours:</b>   | <b>45 hours</b> |
| <b>Text Books</b>   |   |                 |

| <b>Course Objectives:</b>   |  |                               |   |   |   |   |
| <ul style="list-style-type: none"> <li>To impart technological aspects of applied chemistry</li> <li>To lay foundation for practical application of chemistry in engineering aspects</li> </ul>   |  |                               |   |   |   |   |
| <b>Expected Course Outcome:</b>   |  |                               |   |   |   |   |
| <ul style="list-style-type: none"> <li>Students will be familiar with the water treatment, corrosion and its control, engineering applications of polymers, types of fuels and their applications, basic aspects of electrochemistry and electrochemical energy storage devices</li> </ul>  |  |                               |   |   |   |   |
| <b>Module: 1</b>  | <b>Water Technology</b>                                    | <b>5 hours</b>                |   |   |   |   |
| Characteristics of hard water - hardness, DO, TDS in water and their determination – numerical problems in hardness determination by EDTA; Modern techniques of water analysis for industrial use - Disadvantages of hard water in industries.  |  |                               |   |   |   |   |
| <b>Module: 2</b>  | <b>Water Treatment</b>                                     | <b>8 hours</b>                |   |   |   |   |
| Water softening methods: - Lime-soda, Zeolite and ion exchange processes and their applications. Specifications of water for domestic use (ICMR and WHO); Unit processes involved in water treatment for municipal supply - Sedimentation with coagulant- Sand Filtration - chlorination; Domestic water purification – Candle filtration- activated carbon filtration; Disinfection methods- Ultrafiltration, UV treatment, Ozonolysis, Reverse Osmosis; Electro dialysis.   |  |                               |   |   |   |   |
| <b>Module: 3</b>  | <b>Corrosion</b>   | <b>6 hours</b>                |   |   |   |   |
| Dry and wet corrosion - detrimental effects to buildings, machines, devices & decorative artforms, emphasizing Differential aeration, Pitting, Galvanic and Stress corrosion cracking; Factors that enhance corrosion and choice of parameters to mitigate corrosion.   |  |                               |   |   |   |   |
| <b>Module: 4</b>  | <b>Corrosion Control</b>                                   | <b>4 hours</b>                |   |   |   |   |
| Corrosion protection - cathodic protection – sacrificial anodic and impressed current protection methods; Advanced protective coatings: electroplating and electroless plating, PVD and CVD. Alloying for corrosion protection – Basic concepts of Eutectic composition and Eutectic mixtures - Selected examples – Ferrous and non-ferrous alloys.   |  |                               |   |   |   |   |
| <b>Module: 5</b>  | <b>Electrochemical Energy Systems</b>                      | <b>6 hours</b>                |   |   |   |   |
| Brief introduction to conventional primary and secondary batteries; High energy electrochemical energy systems: Lithium batteries – Primary and secondary, its Chemistry, advantages and applications. Fuel cells – Polymer membrane fuel cells, Solid-oxide fuel cells-working principles, advantages, applications. Solar cells – Types – Importance of silicon single crystal, polycrystalline and amorphous silicon solar cells, dye sensitized solar cells - working principles, characteristics and applications. |  |                               |   |   |   |   |
| <b>Module: 6</b>  | <b>Fuels and Combustion</b>                                | <b>8 hours</b>                |   |   |   |   |
| Calorific value - Definition of LCV, HCV. Measurement of calorific value using bomb calorimeter and Boy's calorimeter including numerical problems.<br>Controlled combustion of fuels - Air fuel ratio – minimum quantity of air by volume and by Knocking in IC engines - Octane and Cetane number – Anti-knocking agents.   |  |                               |   |   |   |   |

|  |  |                 |
|--|--|-----------------|
| <b>Module: 7</b>   | <b>Polymers</b>  | <b>6 hours</b>  |
| Difference between thermoplastics and thermosetting plastics; Engineering application of plastics - ABS, PVC, PTFE and Bakelite; Compounding of plastics: molding of plastics for Car parts, bottle caps (Injection molding), Pipes, Hoses (Extrusion molding), Mobile Phone Cases, Battery Trays, (Compression molding), Fiber reinforced polymers, Composites (Transfer molding), PET bottles (blow molding); Conducting polymers - Polyacetylene- Mechanism of conduction – applications (polymers in sensors, self-cleaning windows) |  |                 |
| <b>Module: 8</b>   | <b>Contemporary issues:</b>  | <b>2 hours</b>  |
| Lecture by Industry Experts  |  |                 |
| <b>Total Lecture hours:</b>  |  | <b>45 hours</b> |
| <b>Text Book(s)</b>  |  |                 |

| <b>List of Experiments</b>   |  |                 |
|  | <b>Experiment title</b>  | <b>Hours</b>    |
| 1.   | Water Purification: Estimation of water hardness by EDTA method and its removal by ion-exchange resin  | <b>3 hours</b>  |
|  | Water Quality Monitoring:  | <b>6 hours</b>  |
| 2.   | Assessment of total dissolved oxygen in different water samples by Winkler's method  |                 |
| 3.   | Estimation of sulphate/chloride in drinking water by conductivity method   |                 |
| 4/5.   | Material Analysis: Quantitative colorimetric determination of divalent metal ions of Ni/Fe/Cu using conventional and smart phone digital-imaging methods                         | <b>6 hours</b>  |
| 6.   | Arduino microcontroller based sensor for monitoring pH/temperature/conductivity in samples   | <b>3 hours</b>  |
| 7.   | Iron in carbon steel by potentiometry  | <b>3 hours</b>  |
| 8.   | Construction and working of an Zn-Cu electrochemical cell  | <b>3 hours</b>  |
| 9.   | Determination of viscosity-average molecular weight of different   | <b>6 hours</b>  |

|  |  |                    |
|--|--|--------------------|
| 10.  | Preparation/demonstration of a working model relevant to syllabus. Ex.<br>1. Construction and working of electrochemical energy system – students should demonstrate working of the system.<br>2. Model corrosion studies (buckling of Steel under applied load).<br>3. Demonstration of BOD/COD | Non- contact hours |
|  | 4. Construction of dye sensitized solar cell and demonstration of its working<br>5. Calcium in food samples<br>6. Air quality analysis   |                    |
| Total Laboratory Hours                               |  | <b>30 hours</b>    |
| Mode of Evaluation: Viva-voce, Lab performance & FAT |  |                    |

|  |   | 2                             | 0 | 0 | 0               | 2              |
| <b>Pre-requisite</b>   | Nil   | <b>Syllabus version v.1.0</b> |   |   |                 |                |
| <b>Course Objectives:</b>  |   |                               |   |   |                 |                |
| 1. To understand and appreciate the ethical issues faced by an individual in profession, society and polity<br>2. To understand the negative health impacts of certain unhealthy behaviors<br>3. To appreciate the need and importance of physical, emotional health and social health   |   |                               |   |   |                 |                |
| <b>Expected Course Outcome:</b>  |   |                               |   |   |                 |                |
| Students will be able to:  |   |                               |   |   |                 |                |
| 1. Follow sound morals and ethical values scrupulously to prove as good citizens<br>2. Understand various social problems and learn to act ethically<br>3. Understand the concept of addiction and how it will affect the physical and mental health<br>4. Identify ethical concerns in research and intellectual contexts, including academic integrity, use and citation of sources, the objective presentation of data, and the treatment of human subjects<br>5. Identify the main typologies, characteristics, activities, actors and forms of cybercrime |   |                               |   |   |                 |                |
| <b>Module: 1</b>   | <b>Being good and responsible</b>   |                               |   |   |                 | <b>5 hours</b> |
| Gandhian values such as truth and non-violence – comparative analysis on leaders of past and present – society’s interests versus self-interests–Personal Social Responsibility: Helping the needy, charity and serving the society.   |   |                               |   |   |                 |                |
| <b>Module: 2</b>   | <b>Social Issues 1</b>  |                               |   |   |                 | <b>4 hours</b> |
| Harassment – types - Prevention of harassment, violence and terrorism  |   |                               |   |   |                 |                |
| <b>Module: 3</b>   | <b>Social Issues 2</b>  |                               |   |   |                 | <b>4 hours</b> |
| Corruption: ethical values, causes, impact, laws, prevention – electoral malpractices white collar crimes – tax evasions – unfair trade practices  |   |                               |   |   |                 |                |
| <b>Module: 4</b>   | <b>Addiction and Health</b>   |                               |   |   |                 | <b>3 hours</b> |
| Peer pressure - Alcoholism: ethical values, causes, impact, laws, prevention – Ill effects of smoking – Prevention of Suicides<br>Sexual Health: Prevention and impact of pre-marital pregnancy and Sexually Transmitted Diseases  |   |                               |   |   |                 |                |
| <b>Module: 5</b>   | <b>Drug Abuse</b>   |                               |   |   |                 | <b>4 hours</b> |
| Abuse of different types of legal and illegal drugs: ethical values, causes, impact, laws and prevention   |   |                               |   |   |                 |                |
| <b>Module: 6</b>   | <b>Personal and Professional Ethics</b>   |                               |   |   |                 | <b>3 hours</b> |
| Dishonesty - Stealing - Malpractices in Examinations – Plagiarism  |   |                               |   |   |                 |                |
| <b>Module: 7</b>   | <b>Abuse of technologies</b>  |                               |   |   |                 | <b>4 hours</b> |
| Hacking and other cyber crimes, addiction to mobile phone usage, video games and social networking websites  |   |                               |   |   |                 |                |

|   |  |                  |   |   |   | 1.0 |
| <b>Course Objectives:</b>   |  |                  |   |   |   |     |
| <ol style="list-style-type: none"> <li>1. To provide the knowledge about linear and non-linear data structures</li> <li>2. To provide the knowledge about algorithm analyses</li> <li>3. To focus on the design of algorithms and data structure in various domains</li> <li>4. To focus on various graph algorithms like shortest path algorithm, minimum spanning tree, etc.,</li> <li>5. To provide familiarity with main thrusts of work in algorithms – sufficient to give some context for formulating and seeking known solutions to an algorithmic problem</li> </ol>   |  |                  |   |   |   |     |
| <b>Expected Course Outcomes:</b>  |  |                  |   |   |   |     |
| <p>Upon completion of the course, the students will be able to</p> <ol style="list-style-type: none"> <li>1. Solve real life computing problems by using data structures</li> <li>2. Select the suitable data structures for storage and management of different types of data.</li> <li>3. Apply the algorithm design techniques to analyze, solve and evaluate computing problems.</li> <li>4. Analyze algorithms asymptotically and compute the performance analysis of algorithms with the same functionality.</li> <li>5. Choose an appropriate design paradigm that solves the given problem efficiently along with appropriate data structures.</li> <li>6. Solve complexities of problems in various domains</li> </ol> |  |                  |   |   |   |     |
| <b>Module:1</b>   | <b>INTRODUCTION TO DATA STRUCTURES</b> | <b>5 hours</b>   |   |   |   |     |
| Introduction to Data Structure, Importance of Data Structure, Types of Data Structures, Arrays, Structures, Union, Pointers, Storage Allocation: Static and Dynamic Allocation.   |  |                  |   |   |   |     |
| <b>Module:2</b>   | <b>ANALYSIS OF ALGORITHMS</b>          | <b>5 hours</b>   |   |   |   |     |
| Mathematical Background, Asymptotic Notations, Performance of the Algorithms: Time Complexity, Space Complexity, Master's Theorem.  |  |                  |   |   |   |     |
| <b>Module:3</b>   | <b>LISTS, STACKS AND QUEUES</b>        | <b>9 hours</b>   |   |   |   |     |
| List: Definition, Operations–Implementation, Singly Linked Lists, Doubly Linked Lists, Circular Linked Lists, Stack: Definition, Operations, Implementations, Applications: Recursion, Infix to Postfix and Evaluation of Postfix, Queue: Definition, Operations, Implementations, Applications: Circular Queue and Priority Queue.   |  |                  |   |   |   |     |
| <b>Module:4</b>   | <b>TREES</b>                           | <b>6 hours</b>   |   |   |   |     |
| Definition, Terminology, Binary Tree: Binary Tree Representation, Binary Search Tree, Binary Tree Traversal – Expression Tree, Finding $K_{th}$ element in Binary Tree, Tree to Binary tree conversion, Tree Traversal.   |  |                  |   |   |   |     |
| <b>Module:5</b>   | <b>HASHING AND HEAPS</b>               | <b>6 hours</b>   |   |   |   |     |
| Hashing: General Idea, Hash Function, Hash Table, Collision in Hashing: Separate Chaining and Open Addressing- Rehashing. Heaps: Definition, Basic Operations, Min heap and Max heap Construction, Heap Sort.   |  |                  |   |   |   |     |
| <b>Module:6</b>   | <b>SORTING</b>                         | <b>5 hours</b>   |   |   |   |     |
| Preliminaries, Insertion Sort, Bubble Sort, Selection Sort, Shell Sort, Merge Sort, Quick Sort, Radix Sort  |  |                  |   |   |   |     |
| <b>Module:7</b>   | <b>GRAPH ALGORITHMS</b>                | <b>7 hours</b>   |   |   |   |     |
| Types of Graphs, Graph Representation, Shortest Path Algorithm: Dijkstra's Algorithm, Floyd Warshal's Algorithms, Graph Traversal, Minimum Spanning Tree  |  |                  |   |   |   |     |
| <b>Module:8</b>   | <b>RECENT TRENDS</b>                   | <b>2 hours</b>   |   |   |   |     |

|   |   |                             |                 |

| Pre-requisite  |  | Syllabus version v.1.0 |   |   |   |   |
| <b>Course Objectives:</b>  |  |                        |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. To understand the basic concepts of DBMS and ER Modeling.</li> <li>2. To comprehend the concepts normalization, query optimization and relational algebra.</li> <li>3. To apply the concurrency control, recovery, security and indexing for the existent domain problems.</li> </ol>  |  |                        |   |   |   |   |
| <b>Expected Course Outcome:</b>  |  |                        |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. Acquire a good understanding of the architecture and functioning of database management systems</li> <li>2. Ability to construct an ER model, derive the relational schemas from the model</li> <li>3. Analyze and improve a database design by normalization.</li> <li>4. Ability to associate the basic database storage structure and access techniques including B Tree and B+ Trees</li> <li>5. Analyze the basics of query evaluation and heuristic query optimization techniques.</li> <li>6. Learn concepts of concurrency control for the desirable database problem.</li> <li>7. Analyze the fundamental concepts of recovery mechanisms and learn the recent trends in database.</li> </ol> |  |                        |   |   |   |   |
| <b>Module:1</b>  | <b>DATABASE SYSTEMS CONCEPTS AND ARCHITECTURE</b>  | <b>4 hours</b>         |   |   |   |   |
| Need for Database Systems – Characteristics of Database Approach – Actors in DBMS- Database Administrator - Data Models – Relational, Hierarchical and Network models - Schemas, and Instances - Three-Schema Architecture - The Database System Environment – Overall System<br>Structure/Architecture – Querying- Query Languages - Relational Algebra - Relational Calculus   |  |                        |   |   |   |   |
| <b>Module:2</b>  | <b>DATA MODELING</b>                               | <b>4 hours</b>         |   |   |   |   |
| Entity Relationship Model: Types of Attributes, Relationship, Structural Constraints – Relational Model, Relational Model Constraints – Mapping ER model to a Relational Schema – Integrity Constraints-Extended E-R model - Generalisation – Specialization - Aggregation   |  |                        |   |   |   |   |
| <b>Module:3</b>  | <b>DATABASE DESIGN</b>                             | <b>5 hours</b>         |   |   |   |   |
| Guidelines for Relational Schema - Functional Dependency; Normalization, Boyce Codd Normal Form, Multi-valued Dependency and Fourth Normal Form; Join Dependency and Fifth Normal Form   |  |                        |   |   |   |   |
| <b>Module:4</b>  | <b>QUERY PROCESSING AND TRANSACTION PROCESSING</b> | <b>5 hours</b>         |   |   |   |   |
| Translating SQL Queries into Relational Algebra – Heuristic Query Optimization – Introduction to Transaction Processing – Transaction and System Concepts - Desirable Properties of Transactions – Characterizing Schedules based on Recoverability – Characterizing Schedules based on Serializability - Test for Serializability - Need for Locking - Compatibility Matrix for Locks - Deadlocks in Transactions.  |  |                        |   |   |   |   |

|   |  |                 |
|---|--|-----------------|
| <b>Module:5</b>   | <b>PHYSICAL DATABASE DESIGN</b>  | <b>5 hours</b>  |
| File Organization - RAID devices - Indexing: Single Level Indexing, Multi-level Indexing, Dynamic Multilevel Indexing , Indexing on Multiple Keys – B-Tree Indexing – B+ Tree Indexes - Hashing - Static and Dynamic Hashing. |  |                 |
| <b>Module:6</b>   | <b>CONCURRENCY CONTROL</b>   | <b>5 hours</b>  |
| Lock based protocols - Two-Phase Locking - Graph based Protocols - Tree Protocol - Techniques for Concurrency Control - Concurrency Control based on Timestamp based protocols.   |  |                 |
| <b>Module:7</b>   | <b>RECOVERY TECHNIQUES</b>   | <b>2 hours</b>  |
| Recovery Concepts - Recovery based on Deferred Update - Recovery Techniques based on Immediate Update – Shadow Paging – Distributed databases - Distributed Transactions – Commit Protocols                                   |  |                 |
| <b>Module:8</b>   | <b>CONTEMPORARY ISSUES</b>   | <b>2 hours</b>  |
| <b>Total Lecture hours:</b>   |  | <b>30 hours</b> |
| <b>Text Book(s)</b>   |  |                 |

| Mode of Evaluation: CAT/ Digital Assignment/Quiz/FAT/ Project.  |  |                 |
| <b>List of Experiments</b>  |  |                 |
| 1.  | SQL tool, Data types in SQL, Creating Tables (along with Primary and Foreign keys), Altering Tables and Dropping Tables                                | 3 hours         |
| 2.  | Practice Queries using COUNT, SUM, AVG, MAX, MIN, GROUP BY, HAVING, VIEWS Creation and Dropping.   | 3 hours         |
| 3.  | Practicing Sub queries (Nested, Correlated) and Joins (Inner, Outer and Equi)  | 3 hours         |
| 4.  | Practicing Queries using ANY, ALL, IN, EXISTS, NOT EXISTS, UNION, INTERSECT, CONSTRAINTS etc.  | 3 hours         |
| 5.  | Iterations using For Loop, While Loop and Do while   | 3 hours         |
| 6.  | Declaring Cursor, Opening Cursor, Fetching the data, closing the cursor  | 3 hours         |
| 7.  | Creation of Stored Procedures, Execution of Procedure, and Modification of Procedure   | 3 hours         |
| 8.  | Practicing User Defined Exception and System Defined Exception   | 3 hours         |
| 9.  | Creation of trigger, Insertion using trigger, Deletion using trigger, Updating using trigger   | 3 hours         |
| 10.   | Database Application development   | 3 hours         |
| <b>Total Laboratory Hours</b>   |  | <b>30 hours</b> |
| Mode of assessment: Assessment Examination, FAT Lab Examination   |  |                 |

| Pre-requisite   |                                | Syllabus version v.1.0 |   |   |   |   |
| <b>Course Objectives:</b>   |                                |                        |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. To introduce Operating system concepts, designs and provide the skills required to implement the services.</li> <li>2. To understand the structure and organization of the file system.</li> <li>3. To understand what a process is and how processes are synchronized and scheduled.</li> <li>4. To understand different approaches of memory management, system call for managing process and filesystem.</li> </ol>  |                                |                        |   |   |   |   |
| <b>Expected Course Outcome:</b>   |                                |                        |   |   |   |   |
| <p>Upon completion of the course, the students will be able to</p> <ol style="list-style-type: none"> <li>1. Gain extensive knowledge on principles and modules of operating systems</li> <li>2. Interpret the evolution of OS functionality, structures, layers and different system calls to find the stages of various process states.</li> <li>3. Design a model scheduling algorithm to compute various scheduling criteria.</li> <li>4. Apply and analyze communication between inter process and synchronization techniques.</li> <li>5. Implement page replacement algorithms, memory management and to apply the file system techniques.</li> <li>6. Representing virtualization and demonstrating the various Operating system tasks and the principle algorithms for enumerating those tasks.</li> </ol> |                                |                        |   |   |   |   |
| <b>Module:1</b>   | <b>Introduction</b>            | <b>4 hours</b>         |   |   |   |   |
| Computer-System Organization, Computer-System Architecture, Operating-System Structure (monolithic, layered, modular, micro-kernel models), Operating-System Operations, Operating-System Services, User and Operating-System Interface, System Calls.  |                                |                        |   |   |   |   |
| <b>Module:2</b>   | <b>Processes</b>               | <b>4 hours</b>         |   |   |   |   |
| Process Concept, Operations on Processes, Inter-process Communication, Threads - Overview, Multithreading Models.   |                                |                        |   |   |   |   |
| <b>Module:3</b>   | <b>CPU Scheduling</b>          | <b>4 hours</b>         |   |   |   |   |
| Basic Concepts, Scheduling Criteria, Scheduling Algorithms, Threads, Multiple-Processor Scheduling, Deadlocks- System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock.  |                                |                        |   |   |   |   |
| <b>Module:4</b>   | <b>Process Synchronization</b> | <b>4 hours</b>         |   |   |   |   |
| Background, The Critical-Section Problem, Peterson's Solution, Synchronization Hardware, Mutex Locks, Semaphores, Classic Problems of Synchronization, Monitors, Synchronization Example.   |                                |                        |   |   |   |   |
| <b>Module:5</b>   | <b>Memory Management</b>       | <b>4 hours</b>         |   |   |   |   |
| Introduction, Swapping, Contiguous Memory Allocation, Segmentation, Paging, structure of the Page Table.  |                                |                        |   |   |   |   |

|   |   |                 |
|---|---|-----------------|
| <b>Module:6</b>   | <b>Virtual Memory</b>   | <b>4 hours</b>  |
| Background, Demand Paging, Page Replacement, Allocation of Frames, Thrashing, Introduction to Virtualization.   |   |                 |
| <b>Module:7</b>   | <b>Mass-Storage Structure</b>   | <b>4 hours</b>  |
| Overview, Disk Structure, Disk Scheduling, File -System Interface - File Concept, Access Methods, Directory and Disk Structure, Directory Implementation, Allocation Methods. Future directions in Mobile OS. |   |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>  | <b>2 hours</b>  |
| <b>Total Lecture hours:</b>   |   | <b>30 hours</b> |

| <b>List of Experiments</b>  |   |                 |
| 1.  | Study of Linux commands – System Information, Files and Directories, Process, Text Processing and Scripting, Programming. | 3 hours         |
| 2.  | Shell scripting (I/O, decision making, looping)   | 3 hours         |
| 3.  | Creating Child process (using fork), Zombie, Orphan. Displaying system information using C.                               | 3 hours         |
| 4.  | CPU Scheduling Algorithms (FCFS, SJF, RR, Priority)   | 3 hours         |
| 5.  | Deadlock Avoidance Algorithm (Bankers algorithm)  | 3 hours         |
| 6.  | IPC (Threads, Pipes)  | 3 hours         |
| 7.  | Process synchronization (Producer Consumer / Reader Writer/Dining Philosopher using semaphores)                           | 3 hours         |
| 8.  | Dynamic Memory Allocation Algorithms (First fit, Best fit, Worst fit)   | 3 hours         |
| 9.  | Page Replacement Algorithms. (FIFO, LRU, Optimal)   | 3 hours         |
| 10.   | Disk Scheduling Algorithms.   | 3 hours         |
| <b>Total Laboratory Hours</b>   |   | <b>30 hours</b> |
| Mode of evaluation:   |   |                 |

| CSI2001  | DIGITAL LOGIC AND COMPUTER DESIGN                    | 3                | 0 | 2 | 0 | 4 |
| Pre-requisite  | Nil  | Syllabus version |   |   |   |   |
| v. 1.0   |  |                  |   |   |   |   |
| <b>Course Objectives:</b>  |  |                  |   |   |   |   |
| 1. To acquaint students with the basic concepts of digital and binary systems.<br>2. To analyze and design combinational and sequential logic circuits for real world applications.<br>3. To apply the theoretical concepts in designing the circuits using appropriate tools and hardware.  |  |                  |   |   |   |   |
| <b>Expected Course Outcomes:</b>   |  |                  |   |   |   |   |
| Upon completion of the course, the students will be able to<br>1. Differentiate and represent the different types of number system.<br>2. Express and reduce the logic functions using Boolean Algebra and K-map.<br>3. Design minimal combinational logic circuits.<br>4. Analyze the operation of medium complexity standard combinational circuits like the encoder, decoder, multiplexer, de-multiplexer.<br>5. Analyze and Design the Basic Sequential Logic Circuits<br>6. Outline the construction of Basic Arithmetic and Logic Circuits<br>7. Acquire design thinking capability, ability to design a component with realistic constraints, to solve real world engineering problems and analyze the results. |  |                  |   |   |   |   |
| <b>Module:1</b>  | <b>INTRODUCTION TO DIGITAL LOGIC</b>                 | <b>3 hours</b>   |   |   |   |   |
| Number System, Base Conversion, Binary Codes, Complements, Logic gates, Universal gates, Positive and Negative Logic   |  |                  |   |   |   |   |
| <b>Module:2</b>  | <b>BOOLEAN ALGEBRA</b>                               | <b>6 hours</b>   |   |   |   |   |
| Boolean algebra, Properties of Boolean algebra, Boolean functions, Canonical and Standard forms, Karnaugh map (up to 5 variables), Dont care conditions, Tabulation Method (up to 5 variables).  |  |                  |   |   |   |   |
| <b>Module:3</b>  | <b>INTRODUCTION TO COMBINATIONAL CIRCUITS</b>        | <b>6 hours</b>   |   |   |   |   |
| Design of combinational circuits, Adder, Subtractor, Code Converter, Analyzing a Combinational Circuit.  |  |                  |   |   |   |   |
| <b>Module:4</b>  | <b>DESIGN AND ANALYSIS OF COMBINATIONAL CIRCUITS</b> | <b>9 hours</b>   |   |   |   |   |
| Binary Parallel Adder, Magnitude Comparator, Decoders, Encoders, Multiplexers, De-multiplexers.  |  |                  |   |   |   |   |
| <b>Module:5</b>  | <b>SEQUENTIAL CIRCUITS</b>                           | <b>7 hours</b>   |   |   |   |   |
| Flip Flops, Conversion of Flip flops, Design and Analysis of Sequential circuits   |  |                  |   |   |   |   |
| <b>Module:6</b>  | <b>DESIGN OF REGISTERS AND COUNTERS</b>              | <b>6 hours</b>   |   |   |   |   |
| Registers, Shift Registers, Bi-directional shift registers, Counters, Ripple and Synchronous Counters, Ring and Johnson counters.  |  |                  |   |   |   |   |

|  |   |                 |
|--|---|-----------------|
| <b>Module:7</b>  | <b>ARITHMETIC LOGIC UNIT</b>  | <b>6 hours</b>  |
| Bus Organization, ALU, Design of ALU, Status Register, Design of Shifter.  |   |                 |
| <b>Module:8</b>  | <b>RECENT TRENDS</b>  | <b>2 hours</b>  |
| <b>Total Lecture hours:</b>  |   | <b>45 hours</b> |
| <b>Text Book</b>   |   |                 |

| 4. John F. Wakerly, 2008. Digital Design Principles and Practices, Fourth Edition, Pearson Education. ISBN: 978-8131713662.                  |   |                 |
| Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar  |   |                 |
| <b>List of Indicative Experiments</b>  |   |                 |
| 1.   | Realization of Logic gates using discrete components, verification of truth table for logic gates, realization of basic gates using NAND and NOR gates  |                 |
| 2.   | Implementation of Logic Circuits by verification of Boolean laws and verification of De Morgans.  |                 |
| 3.   | Adder and Subtractor circuit realization by implementation of Half-Adder and Full-Adder, and by implementation of Half-Subtractor and Full-Subtractor.  |                 |
| 4.   | Combinational circuit design<br>i. Design of Decoder and Encoder<br>ii. Design of Multiplexer and De multiplexer<br>iii. Design of Magnitude Comparator<br>iv. Design of Code Converter   |                 |
| 5.   | Sequential circuit design<br>i. Design of Mealy and Moore circuit<br>ii. Implementation of Shift registers<br>iii. Design of 4-bit Counter<br>iv. Design of Ring Counter.   |                 |
| 6.   | Implementation of different circuits to solve real world problems: A digitally controlled locker works based on a control switch and two keys which are entered by the user. Each key has a 2-bit binary representation. If the control switch is pressed, the locking system will pass the difference of two keys into the controller unit. Otherwise, the locking system will pass the sum of the two numbers to the controller unit. Design a circuit to determine the input to the controller unit. |                 |

|   |  |          |            |
|---|--|----------|------------|
| 7.  | Implementation of different circuits to solve real world problems: A bank queuing system has a capacity of 5 customers which serves on first come first served basis. A display unit is used to display the number of customers waiting in the queue. Whenever a customer leaves the queue, the count is reduced by one and the count is increased by one if a customer joins a queue. Two sensors (control signals) are used to sense customers leaving and joining the queue respectively. Design a circuit that displays the number of customers waiting in the queue in binary format using LEDs. Binary 1 is represented by LED glow and 0 otherwise. |          |            |
| Total Laboratory Hours  |  | 30 hours |            |

|--|---|------------------------|---|---|---|---|
| CSI1003  | Formal Languages and Automata Theory                  | 3                      | 0 | 0 | 0 | 3 |
| Pre-requisite  |   | Syllabus version v.1.0 |   |   |   |   |
| <b>Course Objectives:</b>  |   |                        |   |   |   |   |
| The objective of this course is to learn   |   |                        |   |   |   |   |
| 1. Types of grammars and models of automata.   |   |                        |   |   |   |   |
| 2. Limitation of computation: What can be and what cannot be computed.   |   |                        |   |   |   |   |
| 3. Establishing connections among grammars, automata and formal languages and realize the theoretical concepts and techniques involved in the software system development  |   |                        |   |   |   |   |
| <b>Expected Course Outcome:</b>  |   |                        |   |   |   |   |
| After successfully completing the course the student should be able to   |   |                        |   |   |   |   |
| 1. Model, compare and analyse different computational models   |   |                        |   |   |   |   |
| 2. Apply rigorously formal mathematical methods to prove properties of languages, grammars and automata.   |   |                        |   |   |   |   |
| 3. Identify limitations of some computational models and possible methods of proving them.   |   |                        |   |   |   |   |
| 4. Explain the abstract concepts mathematically with notations   |   |                        |   |   |   |   |
| <b>Module:1</b>  | <b>Introduction to Languages and Grammars</b>         | <b>4 hours</b>         |   |   |   |   |
| Recall on Proof techniques in Mathematics - Overview of a Computational Models - Languages and Grammars - Alphabets - Strings - Operations on Languages, Overview on Automata  |   |                        |   |   |   |   |
| <b>Module:2</b>  | <b>Finite State Automata</b>                          | <b>8 hours</b>         |   |   |   |   |
| Finite Automata (FA) - Deterministic Finite Automata (DFA) - Non-deterministic Finite Automata (NFA) - NFA with epsilon transitions – NFA without epsilon transition, conversion of NFA to DFA, Equivalence of NFA and DFA – minimization of DFA   |   |                        |   |   |   |   |
| <b>Module:3</b>  | <b>Regular Expressions and Languages</b>              | <b>7 hours</b>         |   |   |   |   |
| Regular Expression - FA and Regular Expressions: FA to regular expression and regular expression to FA - Pattern matching and regular expressions - Regular grammar and FA - Pumping lemma for regular languages - Closure properties of regular languages, linear grammars and linear languages.                                  |   |                        |   |   |   |   |
| <b>Module:4</b>  | <b>Context Free Grammars</b>                          | <b>7 hours</b>         |   |   |   |   |
| Context-Free Grammar (CFG) – Derivations - Parse Trees - Ambiguity in CFG - CYK algorithm – Simplification of CFG – Elimination of Useless symbols, Unit productions, Null productions - Normal forms for CFG: CNF and GNF - Pumping Lemma for CFL - Closure Properties of CFL, context-sensitive grammars definition and examples |   |                        |   |   |   |   |
| <b>Module:5</b>  | <b>Pushdown Automata</b>                              | <b>5 hours</b>         |   |   |   |   |
| Definition of the Pushdown automata - Languages of a Pushdown automata – Power of Non-Deterministic Pushdown Automata and deterministic pushdown automata  |   |                        |   |   |   |   |
| <b>Module:6</b>  | <b>Turing Machine</b>                                 | <b>6 hours</b>         |   |   |   |   |
| Turing Machines as acceptor and transducer - Multi head and Multi tape Turing Machines – Universal Turing Machine - The Halting problem - Turing-Church thesis   |   |                        |   |   |   |   |
| <b>Module:7</b>  | <b>Recursive and Recursively Enumerable Languages</b> | <b>6 hours</b>         |   |   |   |   |

|  |   |                |                 |
|--|---|----------------|-----------------|
| Recursive and Recursively Enumerable Languages, Language that is not Recursively Enumerable (RE) – computable functions – Chomsky Hierarchy – Undecidable problems - Post's Correspondence Problem |   |                |                 |
| <b>Module:8</b>  | <b>Recent Trends</b>  | <b>2 hours</b> |                 |
| <b>Total Lecture hours:</b>  |   |                | <b>45 hours</b> |

| <b>Course Objectives:</b>  |   |                        |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. To familiarize students with the fundamental components, architecture, register organization and performance metrics of a computer.</li> <li>2. To make students capable for understanding and analyzing the effects of each instruction execution and the data path in those instruction execution.</li> <li>3. To impart the knowledge of data representation in binary and understand implementation of arithmetic algorithms in a typical computer.</li> <li>4. To make students understand the importance of memory systems, IO interfacing techniques and external storage and their performance metrics for a typical computer.</li> </ol>  |   |                        |   |   |   |   |
| <b>Expected Course Outcome:</b>  |   |                        |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. Understand the general architecture of a computer system and the instruction based architecture.</li> <li>2. Illustrate various binary data representations for fixed and floating point data. Validate efficient algorithm for arithmetic operations.</li> <li>3. Explain the importance of hierarchical memory organization. Able to construct larger memories. Analyze and suggest efficient cache mapping technique and replacement algorithms for given design requirements. Get the idea about different external storage devices.</li> <li>4. Understand the need for an interface. Compare and contrast memory mapping and IO mapping techniques. Describe and Differentiate different modes of data transfer. Appraise the synchronous and asynchronous bus for performance and arbitration.</li> <li>5. Understand some system performance enhancement techniques such as pipeline concepts, parallel execution, etc. Introduction to some of the advanced architectures.</li> </ol> |   |                        |   |   |   |   |
| <b>Module:1</b>  | <b>Introduction to computer architecture</b>          | <b>4 hours</b>         |   |   |   |   |
| Introduction to computer systems - Overview of Organization and Architecture – Components, Registers and register files, Connections – Von Neumann machine (IAS Machine) – Architecture – Communication between components   |   |                        |   |   |   |   |
| <b>Module:2</b>  | <b>Instruction Set Architecture</b>                   | <b>6 hours</b>         |   |   |   |   |
| Introduction to ISA (Instruction Set Architecture): Instruction formats - Instruction types - Addressing modes - Instruction cycle – Introduction to Assembly Language Programming.  |   |                        |   |   |   |   |
| <b>Module:3</b>  | <b>Data Representation And Computer Arithmetic</b>    | <b>9 hours</b>         |   |   |   |   |
| Data Representation – Introduction to Fixed point representation of numbers - Floating point representation of numbers (IEEE standard representation) - Algorithms for fixed point arithmetic operations: Addition, Subtraction, Multiplication (Booth's Algorithm), Division - Representation of non-numeric data (character codes).  |   |                        |   |   |   |   |
| <b>Module:4</b>  | <b>Memory System Organization &amp; Architecture</b>  | <b>10 hours</b>        |   |   |   |   |
| Memory systems hierarchy - Main memory organization – Byte ordering - Memory interleaving - Memory characteristics - Cache memories: Introduction - Parameters of Cache memory - Address mapping – Read and write policies - Cache Coherence - Virtual memory systems - TLB - Page replacement Algorithms.   |   |                        |   |   |   |   |
| <b>Module:5</b>  | <b>Interfacing and Communication I/O fundamentals</b> | <b>7 hours</b>         |   |   |   |   |
| I/O fundamentals: I/O Modules, I/O mapped I/O and Memory Mapped I/O - Introduction to I/O techniques: Programmed I/O, Interrupt-driven I/O, DMA - Interrupt structures: Interrupt cycle, Subroutine call and return mechanisms - Bus System: Synchronous and asynchronous buses, Bus Arbitration.  |   |                        |   |   |   |   |

|   |   |                 |
|---|---|-----------------|
| <b>Module:6</b>   | <b>Device Subsystems</b>  | <b>4 hours</b>  |
| External storage systems - Organization and structure of disk drives: Electronic, Magnetic and optical technologies - RAID Levels - I/O Performance   |   |                 |
| <b>Module:7</b>   | <b>Performance Enhancements</b>   | <b>4 hours</b>  |
| Classification of models - Flynn's taxonomy of parallel machine models (SISD, SIMD, MISD, MIMD) - Introduction to data path - Introduction to Pipelining - Pipelined data path - Introduction to hazards. |   |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>  | <b>1 hour</b>   |
| <b>Total Lecture hours:</b>   |   |                 |

| <b>Course Objectives:</b>   |  |                        |   |   |   |                |
| [1] To teach the simple problem of DC and AC circuits.<br>[2] To study the important concepts of Analog and digital electronics.<br>[3] To measure and interpret data   |  |                        |   |   |   |                |
| <b>Expected Course Outcome:</b>   |  |                        |   |   |   |                |
| On the completion of this course the student will be able to:<br>[1] Solve simple DC circuits using mesh and nodal analysis.<br>[2] Describe the RLC components with sinusoidal sources.<br>[3] Design of combinational circuits and synthesis of logic circuits<br>[4] Utilize the basic concepts of semiconductor devices and circuits<br>[5] Interpret the architecture of microprocessor & microcontrollers<br>[6] measure the various signals using the sensors<br>[7] Discuss the overview of communication systems.<br>[8] Design and Conduct experiments, as well as analyze and interpret data |  |                        |   |   |   |                |
| <b>Module:1</b>   | <b>Fundamentals of DC circuits:</b>                    |                        |   |   |   | <b>5 Hours</b> |
| Basic circuit elements and sources, Ohms law, Kirchhoff's laws, Node voltage analysis, Mesh current analysis, Thevenin's and Maximum power transfer theorem.  |  |                        |   |   |   |                |
| <b>Module:2</b>   | <b>Fundamentals of AC Circuits:</b>                    |                        |   |   |   | <b>4 Hours</b> |
| Introduction to AC circuits, Steady state AC analysis of a RL, RC, RLC Series circuits, AC power calculations.  |  |                        |   |   |   |                |
| <b>Module:3</b>   | <b>Digital Systems:</b>                                |                        |   |   |   | <b>4 Hours</b> |
| Number system, Boolean algebra, Logic circuit concepts, Multiplexer, Demultiplexer, Half adder, Full adder, Computer organization, Memory types, Flip Flops, Counters.  |  |                        |   |   |   |                |
| <b>Module:4</b>   | <b>Semiconductor devices:</b>                          |                        |   |   |   | <b>3 Hours</b> |
| Conduction in semiconductor materials, principle of operation, V-I characteristics of PN junction diode, Zener diode, BJT, half wave rectifier, full wave rectifier.  |  |                        |   |   |   |                |
| <b>Module:5</b>   | <b>Microprocessor &amp; microcontroller:</b>           |                        |   |   |   | <b>4 Hours</b> |
| Overview of ARM architecture, Different modes of ARM processor, various instructions, 8051Microcontroller architecture, Applications.   |  |                        |   |   |   |                |
| <b>Module:6</b>   | <b>Measuring Instruments and Sensors:</b>              |                        |   |   |   | <b>5 Hours</b> |
| <b>Measuring Instruments:</b> Classification of instruments, Working principle of PMMC, MI, Digital & Smart Meters, Ammeter, Voltmeter & wattmeter.<br><b>Sensors:</b> Transducers classification & selections, Resistive, Inductive and capacitive sensors, Optical and Digital sensors  |  |                        |   |   |   |                |
| <b>Module:7</b>   | <b>Communication systems</b>                           |                        |   |   |   | <b>3 Hours</b> |
| Modulation and Demodulation – Amplitude, frequency, digital modulation, wired and wireless communication – concept and types  |  |                        |   |   |   |                |
|   |  |                        |   |   |   |                |

|   |   |                 |
|---|---|-----------------|
| <b>Module:8</b>   | <b>Lecture by industry experts.</b>   | <b>2 Hours</b>  |
| <b>Total Lecture hours:</b>   |   | <b>30 Hours</b> |
| <b>List of Challenging Experiments (Indicative</b>                                |   |                 |
| <b>Software Experiments</b>   |   |                 |
| 1. Analysis and verification of circuit using Mesh and Nodal analysis             |   | 2               |
| 2. Verification of network theorems using Maximum power transfer                  |   | 2               |
| 3. Analysis of Single AC circuit with R, RL and RC loads                          |   | 2               |
| 4. Design of half adder and full adder  |   | 2               |
| 5. Single phase half wave   |   | 2               |
| 6. Full wave rectifier  |   | 2               |
| 7. Design of controlled switch using BJT  |   | 2               |
| <b>Hardware Experiments</b>   |   |                 |
| 1. Verification of network theorems using Thevenin's                              |   | 2               |
| 2. Regulated power supply using Zener diode                                       |   | 2               |
| 3. Design of a lamp dimmer circuit using Darlington pair                          |   | 2               |
| 4. Design and verification of logic circuit by simplifying the Boolean expression |   | 2               |
| 5. Calibration of voltmeter and Ammeter   |   | 2               |
| 6. Wiring connection for Fan  |   | 2               |
| 7. Staircase wiring layout for multi-storied building                             |   | 2               |
| 8. Study on Microprocessor kit  |   | 2               |
| <b>Total Laboratory Hours</b>   |   | <b>30 hours</b> |

| <b>Course Objectives :</b>   |  |                               |          |          |          |                |
| [1] Understanding basic concepts of linear algebra to illustrate its power and utility through applications to computer science and Engineering.                             |  |                               |          |          |          |                |
| [2] apply the concepts of vector spaces, linear transformations, matrices and inner product spaces in engineering.   |  |                               |          |          |          |                |
| [3] solve problems in cryptography, computer graphics and wavelet transforms   |  |                               |          |          |          |                |
| <b>Course Outcome :</b>  |  |                               |          |          |          |                |
| At the end of this course the students are expected to learn   |  |                               |          |          |          |                |
| [1] The abstract concepts of matrices and system of linear equations using decomposition methods   |  |                               |          |          |          |                |
| [2] The basic notion of vector spaces and subspaces  |  |                               |          |          |          |                |
| [3] Apply the concept of vector spaces using linear transforms which is used in computer graphics and inner product spaces   |  |                               |          |          |          |                |
| [4] Applications in image processing.  |  |                               |          |          |          |                |
| [5] Applications of inner product spaces in cryptography   |  |                               |          |          |          |                |
| <b>Module:1</b>  | <b>System of Linear Equations:</b>             |                               |          |          |          | <b>6 hours</b> |
| Rank of matrix -Gaussian elimination and Gauss Jordan methods - Elementary matrices- permutation matrix - inverse matrices - System of linear equations - LU factorizations. |  |                               |          |          |          |                |
| <b>Module:2</b>  | <b>Vector Spaces</b>                           |                               |          |          |          | <b>6 hours</b> |
| The Euclidean space $R^n$ and vector space- subspace –linear combination-span-linearly dependent-independent- bases - dimensions-finite dimensional vector space.            |  |                               |          |          |          |                |
| <b>Module:3</b>  | <b>Subspace Properties:</b>                    |                               |          |          |          | <b>6 hours</b> |
| Row and column spaces -Rank and nullity – Bases for subspace – invertibility- Application in interpolation.  |  |                               |          |          |          |                |
| <b>Module:4</b>  | <b>Linear Transformations and applications</b> |                               |          |          |          | <b>7 hours</b> |
| Linear transformations – Basic properties-invertible linear transformation - matrices of linear transformations - vector space of linear transformations.                    |  |                               |          |          |          |                |
| <b>Module:5</b>  | <b>Inner Product Spaces:</b>                   |                               |          |          |          | <b>6 hours</b> |
| Dot products and inner products – the lengths and angles of vectors – matrix representations of inner products- Gram-Schmidt orthogonalisation                               |  |                               |          |          |          |                |
| <b>Module:6</b>  | <b>Applications of Inner Product Spaces:</b>   |                               |          |          |          | <b>6 hours</b> |
| QR factorization- Projection - orthogonal projections -Least Square solutions in Computer Codes.   |  |                               |          |          |          |                |

|   |   |                 |
|---|---|-----------------|
| <b>Module:7</b>   | <b>Applications of Linear equations :</b> | <b>6 hours</b>  |
| An Introduction to coding - Classical Cryptosystems –Plain Text, Cipher Text, Encryption, Decryption .  |   |                 |
| <b>Module:8</b>   | <b>Contemporary Issues:</b>               | <b>2 hours</b>  |
| Industry Expert Lecture and R & D.  |   |                 |
| <b>Total Lecture hours:</b>   |   | <b>45 hours</b> |

To introduce important topics of applied mathematics, namely Single and Multivariable Calculus and Vector Calculus etc.</li> <li>3. To impart the knowledge of Laplace transform, an important transform technique for Engineers which requires knowledge of integration</li> </ol>   |  |                               |          |          |          |          |
| <b>Expected Course Outcomes:</b>   |  |                               |          |          |          |          |
| At the end of this course the students should be able to   |  |                               |          |          |          |          |
| <ol style="list-style-type: none"> <li>1. apply single variable differentiation and integration to solve applied problems in engineering and find the maxima and minima of functions</li> <li>2. understand basic concepts of Laplace Transforms and solve problems with periodic functions, step functions, impulse functions and convolution</li> <li>3. evaluate partial derivatives, limits, total differentials, Jacobians, Taylor series and optimization problems involving several variables with or without constraints</li> <li>4. evaluate multiple integrals in Cartesian, Polar, Cylindrical and Spherical coordinates.</li> <li>5. understand gradient, directional derivatives, divergence, curl and Greens", Stokes, Gauss theorems</li> <li>6. demonstrate MATLAB code for challenging problems in engineering</li> </ol> |  |                               |          |          |          |          |
| <b>Module:1</b>  | <b>Application of Single Variable Calculus</b> | <b>9 hours</b>                |          |          |          |          |
| Differentiation- Extrema on an Interval-Rolle's Theorem and the Mean Value Theorem- Increasing and Decreasing functions and First derivative test-Second derivative test- Maxima and Minima-Concavity. Integration-Average function value - Area between curves - Volumes of solids of revolution - Beta and Gamma functions-interrelation   |  |                               |          |          |          |          |
| <b>Module:2</b>  | <b>Laplace transforms</b>                      | <b>7 hours</b>                |          |          |          |          |
| Definition of Laplace transform-Properties-Laplace transform of periodic functions- Laplace transform of unit step function, Impulse function-Inverse Laplace transform- Convolution.  |  |                               |          |          |          |          |
| <b>Module:3</b>  | <b>Multivariable Calculus</b>                  | <b>4 hours</b>                |          |          |          |          |
| Functions of two variables-limits and continuity-partial derivatives –total differential- Jacobian and its properties.   |  |                               |          |          |          |          |

|  |   |                 |
|--|---|-----------------|
| <b>Module:4</b>  | <b>Application of Multivariable Calculus</b>                | <b>5 hours</b>  |
| Taylor's expansion for two variables–maxima and minima–constrained maxima and minima- Lagrange's multiplier method.  |   |                 |
| <b>Module:5</b>  | <b>Multiple integrals</b>                                   | <b>8 hours</b>  |
| Evaluation of double integrals–change of order of integration–change of variables between Cartesian and polar co-ordinates - Evaluation of triple integrals-change of variables between Cartesian and cylindrical and spherical co-ordinates- evaluation of multiple integrals using gamma and beta functions.   |   |                 |
| <b>Module:6</b>  | <b>Vector Differentiation</b>                               | <b>5 hours</b>  |
| Scalar and vector valued functions – gradient, tangent plane–directional derivative- divergence and curl–scalar and vector potentials–Statement of vector identities-Simple problems   |   |                 |
| <b>Module:7</b>  | <b>Vector Integration</b>                                   | <b>5 hours</b>  |
| line, surface and volume integrals - Statement of Green's, Stoke's and Gauss divergence theorems -verification and evaluation of vector integrals using them.  |   |                 |
| <b>Module:8</b>  | <b>Contemporary Issues:</b>                                 | <b>2 hours</b>  |
| Industry Expert Lecture  |   |                 |
| <b>Total Lecture hours:</b>  |   | <b>45 hours</b> |
| <b>Text Book(s)</b>  |   |                 |

| <b>Mode of Evaluation</b>  |   |                 |
| Digital Assignments, Quiz, Continuous Assessments, Final Assessment Test   |   |                 |
| <b>List of Challenging Experiments (Indicative)</b>  |   |                 |
| 1.   | Introduction to MATLAB through matrices, and general Syntax | 3 hours         |
| 2  | Plotting and visualizing curves and surfaces in MATLAB –    | 3 hours         |

|  |  |                 |
|--|--|-----------------|
|  | Symbolic computations using MATLAB                             |                 |
| 3.                                       | Evaluating Extremum of a single variable function              | 3 hours         |
| 4.                                       | Understanding integration as Area under the curve              | 3 hours         |
| 5.                                       | Evaluation of Volume by Integrals (Solids of Revolution )      | 3 hours         |
| 6.                                       | Evaluating maxima and minima of functions of several variables | 3 hours         |
| 7.                                       | Applying Lagrange multiplier optimization method               | 2 hours 2       |
| 8.                                       | Evaluating Volume under surfaces                               | hours 2         |
| 9.                                       | Evaluating triple integrals                                    | hours 2         |
| 10.                                      | Evaluating gradient, curl and divergence                       | hours 2         |
| 11.                                      | Evaluating line integrals in vectors                           | hours 2         |
| 12.                                      | Applying Green's theorem to real world problems                | hours <b>30</b> |
| Total Laboratory Hours                   |  | <b>hours</b>    |
| <b>Mode of Assessment:</b>               |  |                 |

| <b>MAT2002</b>  | <b>Applications of Differential and Difference Equations</b>                          | <b>L</b>                      | <b>T</b> | <b>P</b> | <b>J</b> | <b>C</b>       |
|   |   | <b>3</b>                      | <b>0</b> | <b>2</b> | <b>0</b> | <b>4</b>       |
| <b>Pre-requisite</b>  | <b>MAT1011 - Calculus for Engineers</b>   | <b>Syllabus version v.1.0</b> |          |          |          |                |
| <b>Course Objectives</b>  |   |                               |          |          |          |                |
| The course is aimed at  |   |                               |          |          |          |                |
| [1] Presenting the elementary notions of Fourier series, which is vital in practical harmonic analysis  |   |                               |          |          |          |                |
| [2] Imparting the knowledge of eigenvalues and eigen vectors of matrices and the transform techniques to solve linear systems, that arise in sciences and engineering   |   |                               |          |          |          |                |
| [3] Enriching the skills in solving initial and boundary value problems   |   |                               |          |          |          |                |
| [4] Impart the knowledge and application of difference equations and the Z-transform in discrete systems, that are inherent in natural and physical processes   |   |                               |          |          |          |                |
| <b>Course Outcome</b>   |   |                               |          |          |          |                |
| At the end of the course the student should be able to  |   |                               |          |          |          |                |
| [1] Employ the tools of Fourier series to find harmonics of periodic functions from the tabulated values  |   |                               |          |          |          |                |
| [2] Apply the concepts of eigenvalues, eigen vectors and diagonalisation in linear systems  |   |                               |          |          |          |                |
| [3] Know the techniques of solving differential equations   |   |                               |          |          |          |                |
| [4] understand the series solution of differential equations and finding eigen values, eigen functions of Sturm-Liouville's problem   |   |                               |          |          |          |                |
| [5] Know the Z-transform and its application in population dynamics and digital signal processing   |   |                               |          |          |          |                |
| [6] demonstrate MATLAB programming for engineering problems   |   |                               |          |          |          |                |
| <b>Module:1</b>   | <b>Fourier series:</b>  |                               |          |          |          | <b>6 hours</b> |
| Fourier series - Euler's formulae - Dirichlet's conditions - Change of interval - Half range series – RMS value – Parseval's identity – Computation of harmonics  |   |                               |          |          |          |                |
| <b>Module:2</b>   | <b>Matrices:</b>  |                               |          |          |          | <b>6 hours</b> |
| Eigenvalues and Eigen vectors - Properties of eigenvalues and eigen vectors – Cayley-Hamilton theorem - Similarity of transformation - Orthogonal transformation and nature of quadratic form   |   |                               |          |          |          |                |
| <b>Module:3</b>   | <b>Solution of ordinary differential equations:</b>                                   |                               |          |          |          | <b>6 hours</b> |
| Linear second order ordinary differential equation with constant coefficients – Solutions of homogenous and non-homogenous equations - Method of undetermined coefficients – method of variation of parameters – Solutions of Cauchy-Euler and Cauchy-Legendre differential equations         |   |                               |          |          |          |                |
| <b>Module:4</b>   | <b>Solution of differential equations through Laplace transform and matrix method</b> |                               |          |          |          | <b>8 hours</b> |
| Solution of ODE's - Nonhomogeneous terms involving Heaviside function, Impulse function - Solving nonhomogeneous system using Laplace transform – Reduction of $n$ th order differential equation to first order system - Solving nonhomogeneous system of first order differential equations |   |                               |          |          |          |                |

|  |  |                |
|--|--|----------------|
| <b>Module:5</b>  | <b>Strum Liouville's problems and powerseries Solutions:</b>   | <b>6 hours</b> |
| The Strum-Liouville's Problem - Orthogonality of Eigen functions - Series solutions of differential equations about ordinary and regular singular points - Legendre differentialequation - Bessel's differential equation  |  |                |
| <b>Module:6</b>  | <b>Z-Transform:</b>  | <b>6 hours</b> |
| Z-transform -transforms of standard functions - Inverse Z-transform: by partial fractionsand convolution method  |  |                |
| <b>Module:7</b>  | <b>Difference equations:</b>   | <b>5 hours</b> |
| Difference equation - First and second order difference equations with constant coefficients - Fibonacci sequence - Solution of difference equations - Complementary function - Particular integral by the method of undetermined coefficients - Solution of simple difference equations using Z-transform |  |                |
| <b>Module:8</b>  | <b>Contemporary Issues</b>   | <b>2 hours</b> |
| Industry Expert Lecture  |  |                |
| <b>Total Lecture hours: 45 Hours</b>   |  |                |
| <b>Text Book(s)</b>  |  |                |

Design the various types of optical fibers for different Engineering applications.</li> <li>7. Apply the various types of optoelectronic devices for designing a typical optical fiber communication system.</li> <li>8. Demonstrate the quantum mechanical ideas</li> </ol> |   |                               |          |          |          |          |
| <b>Module:1</b>  | <b>Introduction to Modern Physics</b>               | <b>6 hours</b>                |          |          |          |          |
| Planck's concept (hypothesis), Compton Effect, Particle properties of wave: Matter Waves, Davisson Germer Experiment, Heisenberg Uncertainty Principle, Wave function, and Schrodinger equation (time dependent & independent).  |   |                               |          |          |          |          |
| <b>Module:2</b>  | <b>Applications of Quantum Physics</b>              | <b>6 hours</b>                |          |          |          |          |
| Particle in a 1-D box (Eigen Value and Eigen Function), 3-D Analysis (Qualitative), Tunneling Effect (Qualitative), Scanning Tunneling Microscope (STM).   |   |                               |          |          |          |          |
| <b>Module:3</b>  | <b>Nanophysics</b>                                  | <b>6 hours</b>                |          |          |          |          |
| Introduction to Nano-materials, Moore's law, Properties of Nano-materials, Types of Nano-materials, Synthesis of Nano-materials (Top-down and Bottom-up approaches), Quantum confinement, Quantum well, wire & dot, Fullerenes, Carbon Nano-tubes (CNT), Applications of nanotechnology in industry.   |   |                               |          |          |          |          |
| <b>Module:4</b>  | <b>Laser Principles and Engineering Application</b> | <b>7 hours</b>                |          |          |          |          |
| Laser Characteristics, Spatial and Temporal Coherence, Einstein Coefficient & its significance, Population inversion, Two, three & four level systems, Pumping schemes, Threshold gain coefficient, Components of laser, Nd-YAG, He-Ne, CO <sub>2</sub> and their engineering applications.  |   |                               |          |          |          |          |
| <b>Module:5</b>  | <b>Electromagnetic Theory and its application</b>   | <b>6 hours</b>                |          |          |          |          |

|  |   |                 |
|--|---|-----------------|
| Physics of Divergence, Gradient and Curl, Qualitative understanding of surface and volume integral, Maxwell Equations (Qualitative), Wave Equation (Derivation), EM Waves, Phase velocity, Group velocity, Group index (Qualitative), experimental evidence of light as em wave (Hertz experiment) |   |                 |
| <b>Module:6</b>  | <b>Propagation of EM waves in Optical fibers</b>  | <b>6 hours</b>  |
| Light propagation through fibers, Acceptance angle, Numerical Aperture, Types of fibers -step index, graded index, single mode & multimode, Attenuation, Dispersion-intermodal and intramodal.   |   |                 |
| <b>Module:7</b>  | <b>Optoelectronic Devices &amp; Applications of Optical fibers</b>  | <b>6 hours</b>  |
| Introduction to semiconductors, Direct and indirect bandgap, Sources-LED & Laser Diode, Detectors-Photodetectors- PN & PIN - Applications of fiber optics in communication- Endoscopy.   |   |                 |
| <b>Module:8</b>  | <b>Contemporary issues</b>  | <b>2 hours</b>  |
| Lecture by Industry Experts  |   |                 |
|  | <b>Total Lecture hours:</b>   | <b>45 hours</b> |

| <b>List of Experiments</b>      |  |            |                 |
|---------------------------------|--|------------|-----------------|
| 1.                              | Electron diffraction   |            | 2 hrs           |
| 2.                              | Determination of wavelength of laser source (He -Ne laser and diode lasers of different wavelengths) using diffraction technique |            | 2 hrs           |
| 3.                              | Determination of size of fine particle using laser diffraction   |            | 2 hrs           |
| 4.                              | Determination of the track width (periodicity) in a written CD   |            | 2 hrs           |
| 5.                              | Optical Fiber communication (source + optical fiber + detector)  |            | 2 hrs           |
| 6.                              | Analysis of crystallite size and strain in a nano -crystalline film using X-ray diffraction                                      |            | 2 hrs           |
| 7.                              | Numerical solutions of Schrödinger equation (e.g. particle in a box problem) (can be given as an assignment)                     |            | 2 hrs           |
| 8.                              | Laser coherence length measurement   |            | 2 hrs           |
| 9.                              | Proof for transverse nature of E.M. waves  |            | 2 hrs           |
| 10                              | Quantum confinement and Heisenberg's uncertainty principle   |            | 2 hrs           |
| 11                              | Determination of angle of prism and refractive index for various colours – Spectrometer  |            | 2 hrs           |
| 12                              | Determination of divergence of a laser beam  |            | 2 hrs           |
| 13                              | Determination of crystalline size for nanomaterial (Computer simulation)   |            | 2 hrs           |
| 14                              | Demonstration of phase velocity and group velocity (Computer simulation)   |            | 2 hrs           |
| <b>Total Laboratory Hours</b>   |  |            | <b>30 hrs</b>   |

| <b>List of Experiments</b>  |   |                 |
| 1.  | Implementation of algorithms for problems that can be solved by one or more of the following strategies: Divide and Conquer, Brute force, Greedy, Dynamic Programming. Branch-and-Bound algorithm for the 0-1 Knapsack problem to maximize the profit for a given problem instance. | 6 hours         |

|   |   |                 |
|---|---|-----------------|
| 2.  | Implementation of Graham's scan and Gift wrapping algorithms. In addition to that, using the implementation compare the running time of both the algorithms empirically by taking large input size range. Finally, compare empirical analysis and theoretical time complexity of both the algorithms.   | 4 hours         |
| 3.  | Implementation of Ford-Fulkerson algorithm for computing a maximum flow in a network.   | 2 hours         |
| 4.  | Randomized Algorithms: Las Vegas and Monte Carlo algorithms   | 2 hours         |
| 5.  | Implementation of solution techniques for the minimum-cost flow problem.  | 2 hours         |
| 6   | Heuristic search and A*, AO* algorithms   | 2 hours         |
| 7   | Implementation of algorithms for Bin Packing, TSP, Vertex cover   | 4 hours         |
| 8   | Implementation of search algorithms for graphs and trees: fundamental algorithms, Floyd Washall algorithm, Ford-Fulkerson Method and Edmonds-Karp Algorithm   | 6 hours         |
| 9   | <p>A simple polygon is defined as a flat shape consisting of straight non-intersecting line segments or sides that are joined pair –wise to form a closed path. Let <math>P = \{p_1, p_2, p_3, \dots, p_n\}</math> be a set of points in the two dimensional plane.</p> <p>a. Write a program to find the simple polygon of P .</p> <p>b. Write a program (linear time) to convert that the simple polygon of P to a Convex Hull.</p> | 2 hours         |

| <b>Course Objectives:</b>   |  |                               |          |          |          |          |
| <p>1.To introduce the essential software engineering concepts involved in developing software products and components</p> <p>2. To impart development skills during design, implementation and testing of reliable software systems across various disciplines</p> <p>3. To familiarize engineering practices and standards used in developing software products and components</p>   |  |                               |          |          |          |          |
| <b>Expected Course Outcome:</b>   |  |                               |          |          |          |          |
| <p>1. Apply the principles of Software engineering methodology during software development and deployment process.</p> <p>2. Document various processes like Requirement Engineering, Design and Testing.</p> <p>3. Demonstrate an ability to use the techniques and tools necessary for significant application domains</p> <p>4. Apply software testing and quality knowledge and engineering methods for various applications</p> <p>5. Analyze the effectiveness of managing software projects through various techniques like Estimations, Scheduling and Quality Models</p> <p>6. Apply benchmarking standards in process and in product.</p> |  |                               |          |          |          |          |
| <b>Module:1</b>   | <b>INTRODUCTION</b>                    | <b>5 hours</b>                |          |          |          |          |
| <p>Software Engineering- Need, Importance and its characteristics - Software Process- Generic process model- Prescriptive process model-specialized, unified process-Agile development-Agile Process- Extreme Programming- Other agile Process models-Software engineering Knowledge-core Principles-Principles that guide each framework Activity.</p>   |  |                               |          |          |          |          |

|  |                                      |                |
|--|--------------------------------------|----------------|
| <b>Module:2</b>  | <b>SOFTWARE REQUIREMENT ANALYSIS</b> | <b>5 hours</b> |
| <p>Requirements Engineering-Establishing the Groundwork-Eliciting Requirements- Developing use cases-Building the requirements model-Negotiating, validating Requirements-Requirements Analysis-Requirements Modeling Strategies.</p> <p><b>Specifying Requirements:</b> functional and non-functional requirements; specification exercise. Managing the Requirements Process: methods which provide a structure for co-operation between different stake holders. Prototyping: The role of prototyping in requirements techniques for prototyping. Requirements for Future Technologies: Computer Supported Co-operative Work (CSCW); networked multi-media systems.</p> |                                      |                |
| <b>Module:3</b>  | <b>SOFTWARE DESIGN</b>               | <b>5 hours</b> |
| <p>Design concepts and principles - Abstraction - Refinement - Modularity – Cohesion &amp; coupling, Architectural design, Detailed Design – Transaction &amp; Transformation, Refactoring of designs, Object-oriented Design User-Interface Design; Object Oriented Design Concepts and Diagrams - Use Case Diagrams - Class Diagrams - Interaction Diagrams - State chart Diagrams - Activity Diagrams - Package Diagrams - Component Diagrams – Deployment Diagrams</p>   |                                      |                |
| <b>Module:4</b>  | <b>SOFTWARE IMPLEMENTATION</b>       | <b>4 hours</b> |
| <p>Structured coding Techniques-Coding Styles-Standards and Guidelines- Documentation Guidelines-Modern Programming Language Features: Type checking-User defined data types-Data Abstraction-Exception Handling- Concurrency Mechanism – Seven Steps of implementing software – Implementation Challenges and its resolution.</p>   |                                      |                |
| <b>Module:5</b>  | <b>SOFTWARE TESTING</b>              | <b>4 hours</b> |
| <p>TESTING: Introduction; Software Testing Fundamental; Testing Principles; Testing Levels; Verification and Validation: Validation Testing, Validation Test Criteria; Test Plan: Test Documentation; Test Strategies: Top-Down Testing, Bottom-Up Testing, Thread testing, Stress testing, Back-to-back testing; Testing methods and tools: Testing through reviews, Black-box testing (Functional testing), White box testing (glass-box testing), Testing software changes; Additional requirements in testing OO Systems; Metrics Collection, Computation, and Evaluation; Test and QA plan; Managing Testing Functions.</p>   |                                      |                |
| <b>Module:6</b>  | <b>SOFTWARE MAINTENANCE</b>          | <b>3 hours</b> |
| <p>Software Maintenance, Types of Maintenance, Structured versus unstructured maintenance – Maintenance costs – Typical problems with maintenance and its side-effects – Maintenance</p>   |                                      |                |

process - Software Configuration Management – Component Reusability - Overview of RE-engineering & Reverse Engineering- Business Process Reengineering- Restructuring- Forward Engineering- Economics of Reengineering.

|                 |   |                |
|-----------------|---|----------------|
| <b>Module:7</b> | <b>PROJECT PLANNING AND RISK MANAGEMENT</b> | <b>2 hours</b> |
|-----------------|---|----------------|

Objectives of Activity planning – Project schedules – Activities – Sequencing and scheduling – Network Planning models – Forward Pass & Backward Pass techniques – Critical path (CRM) method – Risk identification – Assessment – Monitoring – PERT technique – Monte Carlo simulation – Resource Allocation – Creation of critical patterns – Cost schedules.

|                 |                      |                |

| <b>Module:1</b>  | <b>INTRODUCTION TO COMPILATION AND LEXICAL ANALYSIS</b> | <b>7 hours</b>            |   |   |   |   |
| Introduction to programming language translators-Structure and phases of a compiler-Design issues- Patterns- lexemes-Tokens-Attributes-Specification of Tokens- Extended Regular expression, Regular expression to Deterministic Finite Automata (Direct method).  |   |                           |   |   |   |   |
|  |   |                           |   |   |   |   |
| <b>Module:2</b>  | <b>SYNTAX ANALYSIS –TOP DOWN</b>                        | <b>5 hours</b>            |   |   |   |   |
| Role of parser- Parse Tree - Elimination of ambiguity - Top down parsing - Recursive Descent parsing - Non Recursive Descent parsing - Predictive Parsing - LL(1) grammars.  |   |                           |   |   |   |   |
|  |   |                           |   |   |   |   |
| <b>Module:3</b>  | <b>SYNTAX ANALYSIS –BOTTOM UP</b>                       | <b>7 hours</b>            |   |   |   |   |
| Shift Reduce Parsers- Operator Precedence Parsing ,LR parsers:-Construction of SLR parser tables and parsing , CLR parsing -LALR parsing   |   |                           |   |   |   |   |
|  |   |                           |   |   |   |   |
| <b>Module:4</b>  | <b>SEMANTICS ANALYSIS</b>                               | <b>6 hours</b>            |   |   |   |   |
| Syntax Directed Definition – Evaluation Order - Applications of Syntax Directed Translation -  |   |                           |   |   |   |   |

|   |   |                 |
|---|---|-----------------|
| Syntax Directed Translation Schemes - Implementation of L attributed Syntax Directed Definition.  |   |                 |
|   |   |                 |
| <b>Module:5</b>   | <b>INTERMEDIATE CODE GENERATION</b>   | <b>7 hours</b>  |
| Variants of syntax trees - Three address code- Types – Declarations - Procedures - Assignment Statements - Translation of Expressions - Control Flow - Back Patching- Switch Case Statements. |   |                 |
|   |   |                 |
| <b>Module:6</b>   | <b>CODE OPTIMIZATION</b>  | <b>6 hours</b>  |
| Loop optimizations- Principal sources of optimization -Introduction to Data Flow Analysis - Basic Blocks - The DAG Representation of Basic Blocks -Loops in Flow Graphs.                      |   |                 |
|   |   |                 |
| <b>Module:7</b>   | <b>CODE GENERATION &amp; OTHER TRANSLATIONS ISSUES</b>  | <b>5 hours</b>  |
| Issues in the design of a code generator- Target Machine- Next-Use Information - Optimization of basic blocks - Peephole Optimization - Register Allocation and Assignment.                   |   |                 |
|   |   |                 |
| <b>Module:8</b>   | Recent Trends   | <b>2 hours</b>  |
|   |   |                 |

| <b>Course Objectives:</b>   |  |                        |                |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. To acquaint students with basic concepts of block diagram, architecture, pin diagram, addressing modes and instruction set of an 8086/ARM microprocessor.</li> <li>2. To teach students syntax and semantics of assembly language programming and its constructs. To facilitate students to practice sample assembly programs and develop logic for other operations.</li> <li>3. To explore special architectural features and various peripheral IC's for designing a typical computing system.</li> <li>4. To understand the need for numeric co-processor. Also develop skill on open source prototyping boards for developing any smart systems for contemporary issues.</li> </ol>  |  |                        |                |   |   |   |   |
| <b>Expected Course Outcome:</b> At the end of this course, students will be able to   |  |                        |                |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. Explain the design aspects of a typical microprocessor and illustrate its capabilities.</li> <li>2. Practice and emulate assembly programs. To develop logic at assembly level for various operations.</li> <li>3. Understand need for and working of Stack, Interrupt Service Routines (ISRs) and Procedures. Practice assembly programs for file handling and other operations using ISR.</li> <li>4. Illustrate interfacing of basic devices viz. memory, IO, data converters and motors.</li> <li>5. Illustrate interfacing of special purpose programmable devices viz. timer/counter, interrupt controller, display controller, communication and direct memory access.</li> <li>6. Explain the design aspects of numeric co-processor and illustrate its capabilities with sample assembly programs.</li> <li>7. Explore open source prototyping board, sample sensors and actuators and develop smart solutions for socio-economic issues.</li> </ol> |  |                        |                |   |   |   |   |
| <b>Module:1</b>   | <b>Intel x86/ARM Processors</b>                |                        | <b>5 hours</b> |   |   |   |   |
| Architecture and Signal Description, Register and Memory Organization, General Bus Operations and IO Addressing Capability, Special Processor Activities, Min and Max Modes, Reduced-Instruction-Set Computing(RISC)  |  |                        |                |   |   |   |   |
| <b>Module:2</b>   | <b>Assembly Language Programming and Tools</b> |                        | <b>5 hours</b> |   |   |   |   |
| Addressing modes and Instruction Set, Assembler Directives and Operators, Introduction to   |  |                        |                |   |   |   |   |

|  |  |                |
|--|--|----------------|
| emu8086 emulator and MASM assembler, Assembly Language example programs.   |  |                |
| <b>Module:3</b>  | <b>Special Architectural Features and Programming</b>      | <b>3 hours</b> |
| Stack – stack structure of 8086/ARM and programming; Interrupt – interrupt cycle, non-mask-able, mask- able, Interrupt Service Routine, programming; procedure and macro– definition and passing parameters; handling larger programs; timing and delays – clock cycle, states, instruction execution time, clock count for generating delays; file management – create, open, close, read, write and delete operations; |  |                |
| <b>Module:4</b>  | <b>Basic Peripherals Interfacing</b>                       | <b>4 hours</b> |
| Memory Interfacing – Interleaving, static and dynamic RAM interfacing; IO Ports Interfacing – memory mapped I/O, I/O mapped I/O; PIO 8255 – architecture, pin, control word register, operation modes; A/D Interfacing – 0808 SAR, 7109 dual-slope, interfacing; D/A – 7523, DAC0800; Stepper Motor – 4 winding internal schematic, excitation sequence, sample programs.  |  |                |
| <b>Module:5</b>  | <b>Special Purpose Programmable Peripheral Interfacing</b> | <b>5 hours</b> |
| Timer/Counter 8253 – architecture, pin, control word register, operation modes, programming; PIC-8259 – architecture, pin, interrupt sequence, command words, operation modes, programming; 8279 – architecture, pin, operation modes, programming; 8251 – communication methods, architecture, pin, operation modes, programming; 8257 – architecture, pin, DMA transfers and operations, programming.                  |  |                |
| <b>Module:6</b>  | <b>Numeric Co-Processor 8087</b>                           | <b>4 hours</b> |
| Overview, compatible processor and coprocessor, pin, architecture, block diagram - control unit, numeric execution unit, registers, status word, circuit connection of 8086-8087,data types, IEEE floating point standard, instruction set, sample programs.   |  |                |
| <b>Module:7</b>  | <b>Case Study on Microcontroller Boards</b>                | <b>2 hours</b> |
| Introduction to Microcontroller, UNO Board, IDE, Programming using GPIO for LED, LCD, Keypad, Motor, Sensor interfacing, case study on smart system design.  |  |                |
| <b>Module:8</b>  | <b>Recent Trends</b>                                       | <b>2 hours</b> |

| <b>List of Experiments</b>   |  |                 |
|  |  |                 |
| 1.   | Arithmetic operations 8/16 bit using different addressing modes.   | 2 hours         |
| 2.   | Finding the factorial of an 8 /16 bit number   | 1 hour          |
| 3.   | (a) Solving $nCr$ and $nPr$<br>(b) Compute $nCr$ and $nPr$ using recursive procedure. Assume that „n“ and „r“ are non-negative integers.                         | 2 hours         |
| 4.   | Fibonacci series   | 1 hours         |
| 5.   | Sorting in ascending and descending order  | 2 hours         |
| 6.   | (a) Search a given number or a word in an array of given numbers.<br>(b) Search a key element in a list of „n“ 16-bit numbers using the Binary search algorithm. | 2 hours         |
| 7.   | To find the smallest and biggest numbers in a given array.   | 2 hours         |
| 8.   | ALP for number bases conversions   | 2 hours         |
| 9.   | String operations (String length, reverse, comparison, concatenation,  | 2 hours         |

|  |  |                 |
|--|--|-----------------|
|  | palindrome)  |                 |
| 10.                                    | Password checking  | 2 hours         |
| 11.                                    | Convert a 16-bit binary value (assumed to be an unsigned integer) to BCD and display it from left to right and right to left for specified number of times | 2 hours         |
| 12.                                    | Read the current time from the system and display it in the standard format on the screen.   | 2 hours         |
| 13.                                    | Program to simulate a Decimal Up-counter to display 00-99.   | 2 hours         |
| 14.                                    | Read a pair of input co-ordinates in BCD and move the cursor to the specified location on the screen.  | 2 hours         |
| 15.                                    | Stepper motor interface using 8086/ Intel Galileo Board  | 2 hours         |
| 16.                                    | Seven segment LED DISPLAY using 8086/Intel Arduino Board   | 2 hours         |
|  |  |                 |
| Total Laboratory Hours                 |  | 30 hours        |
| Mode of evaluation: CAT/FAT/Assignment |  |                 |

| <b>Course Objectives:</b>  |   |                           |   |   |   |   |
| <p>1.To learn the emerging concepts of cryptography and algorithms</p> <p>2. To defend the security attacks on information systems using secure algorithms and Authentication process</p> <p>3.To categorize and analyze the key concepts in network and wireless security</p>   |   |                           |   |   |   |   |
| <b>Expected Course Outcome:</b>  |   |                           |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. Infer the need of security to introduced strong cryptosystems.</li> <li>2. Analyze the cryptographic algorithms for information security.</li> <li>3. Identify the authentication schemes for membership authorization.</li> <li>4. Identify computer and network security threats, classify the threats and develop a security model for detect and mitigate the attacks.</li> <li>5. Identify the requirements for secure communication and challenges related to the secure web services</li> <li>6. Identify the need of ethical and professional practices, risk management using emerging security solutions.</li> </ol> |   |                           |   |   |   |   |
| <b>Module:1</b>  | <b>Introduction to Cryptography</b>       | <b>4 hours</b>            |   |   |   |   |
| Security trends, Security attacks, Security mechanism, Elementary number theory, Pseudo-random bit generation. <b>Basic security services:</b> confidentiality, integrity, availability, non-repudiation, privacy.   |   |                           |   |   |   |   |
| <b>Module:2</b>  | <b>Symmetric Key Cryptography</b>         | <b>4 hours</b>            |   |   |   |   |
| Block Ciphers: DES, Triple-DES, AES, Modes of Operation, Stream Cipher   |   |                           |   |   |   |   |
| <b>Module:3</b>  | <b>Asymmetric Key Cryptography</b>        | <b>4 hours</b>            |   |   |   |   |
| RSA, Elgamal, Elliptic Curve Cryptography (ECC), Diffie-Hellman key exchange protocol  |   |                           |   |   |   |   |
|  |   |                           |   |   |   |   |

|  |  |                |
|--|--|----------------|
| <b>Module:4</b>  | Hash Functions and Authentication  | <b>4 hours</b> |
| Message Authentication Code (MAC), MD5, Secure Hash algorithms (SHA), HMAC, Digital Signatures, Digital Signature Standard (DSS).                          |  |                |
| <b>Module:5</b>  | <b>Basic Applied Cryptography</b>  | <b>3 hours</b> |
| Key management and distribution, digital certificates, identity-based encryption, Identification and authentication, zero knowledge protocols              |  |                |
| <b>Module:6</b>  | <b>Advanced Applied cryptography</b>   | <b>5 hours</b> |
| Side-channel attack, Pretty Good Privacy (PGP), S/MIME, Kerberos, Homomorphic encryption, Quantum Cryptography, DNA Cryptography, Chaos Based Cryptosystem |  |                |
| <b>Module:7</b>  | <b>Web and Wireless Security</b>   | <b>4 hours</b> |
| IPsec: AH and ESP, IKE- SSL/TLS, Types of Firewalls, Intrusion detection and Prevention systems, Wireless Application Protocol (WAP)                       |  |                |
| <b>Module:8</b>  | Recent Trends  | <b>2 hours</b> |
| <b>Total Hours: 30 hours</b>   |  |                |
| <b>List of Experiments</b>   |  |                |
| 1  | Implement DES, Triple DES and AES Key Algorithms   | <b>4 Hours</b> |
| 2  | Implement RSA, ECC and Diffie-Hellman Key Establishment.   | <b>4 Hours</b> |
| 3  | Implement a Secret-Sharing algorithm and Homomorphic Encryption algorithm  | <b>2 Hours</b> |
| 4  | Implement message authentication (MAC) and HASH algorithms   | <b>3 Hours</b> |
| 5  | Consider and examine the Wireless network security and technology integration for compliance using the case study of Cisco.  | <b>2 Hours</b> |
| 6  | Explore the Snort Intrusion Detection Systems. Study Snort IDS, a signature-based intrusion detection system used to detect network attacks. Snort can also be used as a simple packet logger. For the purpose of this lab the | <b>4 Hours</b> |

|   |   |                 |
|---|---|-----------------|
|   | students will use snort as a packet sniffer and write their own IDS rules   |                 |
| 7   | Explore ways to perform wireless attacks and understand potential defences. The attacks that will be covered are inspecting & modifying wireless card parameters, changing the wireless transmission channel, flooding attacks, and cracking keys of WPA2 protected networks.   | <b>4 Hours</b>  |
| 8   | Pretty Good Privacy – <ul style="list-style-type: none"> <li>• Create a public/private key pair in PGP</li> <li>• Create a revocation key</li> <li>• Exchange PGP keys with other students</li> <li>• Signing the new key</li> <li>• Encrypting a file using your partner's public key</li> <li>• Decrypting the file using your private key</li> <li>• Encrypting and signing a file</li> <li>• Verifying the signature</li> <li>• Sending secure Email with PGP</li> <li>• Adding a public key and sending secure email.</li> </ul> | <b>4 Hours</b>  |
| 9   | Send and receive an encrypted email message using S/MIME.   | <b>3 Hours</b>  |
| <b>Total Lecture hours:</b>                             |   | <b>30 hours</b> |
| <b>Text Book(s)</b>                                     |   |                 |

| <b>Course Objectives:</b>   |   |                           |   |   |   |   |
| <p>1. Understand Object Oriented Programming &amp; Functional Programming in Java, Handling Exceptions and Multithreading.</p> <p>2. Able to perform File Handling, Manipulating Strings, Generic Programming.</p> <p>3. Use of Java for Event Handling and Web applications using Servlets.</p>  |   |                           |   |   |   |   |
| <b>Expected Course Outcome:</b>   |   |                           |   |   |   |   |
| At the end of this course students should be able to:   |   |                           |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. Analyze the programs involving the fundamental program constructs.</li> <li>2. Choose the appropriate OOP technique for solving the real world problem.</li> <li>3. Demonstrate exception handling and use of threads in Java.</li> <li>4. Propose the use of Generic programming and file handling for different scenarios.</li> <li>5. Explore various methods for manipulating strings and several collections.</li> <li>6. Choose appropriate elements to facilitate event handling and GUI programming.</li> <li>7. Design and develop web applications using Servlets with JDBC.</li> </ol> |   |                           |   |   |   |   |
| <b>Module:1</b>   | <b>Introduction to Java Programming</b> | <b>4 hours</b>            |   |   |   |   |
| Overview of Java Language: Introduction, Java Virtual Machine, program structure, Java tokens, statements, variables, scope of variables and data types. Arrays: One-Dimensional arrays, Multidimensional Arrays.   |   |                           |   |   |   |   |
| <b>Module:2</b>   | <b>Object, Class and Packages</b>       | <b>7 hours</b>            |   |   |   |   |
| Object Oriented Programming and Java –. Classes – Objects – Methods – Constructors – this keyword – Garbage collection – Overloading methods – Objects as parameters and returning objects – Nested and Inner classes – static and final keywords – Inheritance: Basics, Using super, Class hierarchy, Method overriding, Abstract classes – The Object Class – Packages and Interfaces.  |   |                           |   |   |   |   |
|   |   |                           |   |   |   |   |

|   |  |                 |
|---|--|-----------------|
| <b>Module:3</b>   | <b>Exceptions and Threads</b>                  | <b>7 hours</b>  |
| <p>Exception Handling: Fundamentals, Types, Uncaught Exceptions, Using try and catch, Multiple catch clauses, Nested try, Built-in Exceptions, Creating your own exception subclasses.</p> <p>Threads: Java thread model, Main thread, Creating a thread, Creating multiple threads, Thread priorities, Synchronization, Inter thread communication, Thread's states, Multithreading.</p> |  |                 |
| <b>Module:4</b>   | <b>Files and Generics</b>                      | <b>6 hours</b>  |
| <p>I/O streams – Console I/O – The PrintWriter class – Reading and Writing files. Generics: Basics, A Generic class, General form, Using wildcard arguments, Generic methods, Generic Interfaces, Generic Class hierarchy, Type inference.</p>  |  |                 |
| <b>Module:5</b>   | <b>Lambda Expressions and Strings</b>          | <b>6 hours</b>  |
| <p>Lambda Expressions: Introduction, Block Lambda expressions, Passing Lambda expressions as arguments, Lambda Expressions and Exceptions.</p> <p>String Handling: The String Constructors, Various String Operations, StringBuffer and StringBuilder Classes.</p>  |  |                 |
| <b>Module:6</b>   | <b>Java Event Handling and GUI Programming</b> | <b>6 hours</b>  |
| <p>Event Handling mechanism, Event Delegation, Event and KeyEvent Classes, EventListener Interfaces. GUI Programming with JavaFX: UI Controls, Layout Classes, Collection Classes, Media Classes.</p>   |  |                 |
| <b>Module:7</b>   | <b>Java Servlets and JDBC</b>                  | <b>7 hours</b>  |
| <p>Background - Lifecycle of a servlet – Development – The Servlet API – The javax.servlet package – Reading Servlet Parameters - Handling http requests and responses – Using Cookies – Session Tracking – JDBC-Servlets with JDBC</p>   |  |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>                           | <b>2 hours</b>  |
| <b>Total Lecture hours:</b>   |  | <b>45 hours</b> |

| <b>Module:1</b>   | <b>Basics of Data Science</b>      | <b>5 hours</b>                |          |          |          |          |
| Introduction; Typology of problems; Importance of linear algebra, statistics and optimization from a data science perspective; Structured thinking for solving data science problems, Structured and unstructured data  |                                    |                               |          |          |          |          |
| <b>Module:2</b>   | <b>Statistical Foundations</b>     | <b>7 hours</b>                |          |          |          |          |
| Descriptive statistics, Statistical Features, summarizing the data, outlier analysis, Understanding distributions and plots, Univariate statistical plots and usage, Bivariate and multivariate statistics, Dimensionality Reduction, Over and Under Sampling, Bayesian Statistics, Statistical Modeling for data analysis  |                                    |                               |          |          |          |          |
| <b>Module:3</b>   | <b>Algorithmic Foundations</b>     | <b>8 hours</b>                |          |          |          |          |
| Linear algebra Matrices and their properties (determinants, traces, rank, nullity, etc.); Eigenvalues   |                                    |                               |          |          |          |          |

and eigenvectors; Matrix factorizations; Inner products; Distance measures; Projections; Notion of hyperplanes; half-planes, elementary spectral graph theory. Sampling and VC-dimension - Random walks and graph sampling, MCMC algorithms, learning, linear and non-linear separators, PAC learning

|                 |                     |                |
|-----------------|---------------------|----------------|
| <b>Module:4</b> | <b>Optimization</b> | <b>7 hours</b> |
|-----------------|---------------------|----------------|

Unconstrained optimization; Necessary and sufficiency conditions for optima; Gradient descent methods; Constrained optimization, KKT conditions; Introduction to non-gradient techniques; Introduction to least squares optimization

|                 |   |                |
|-----------------|---|----------------|
| <b>Module:5</b> | <b>Programming Foundation and Exploratory Data Analysis</b> | <b>6 hours</b> |
|-----------------|---|----------------|

Introduction to Python Programming, Types, Expressions and Variables, String Operations, selection, iteration, Data Structures- Strings, Regular Expression, List and Tuples, Dictionaries, Sets; Exploratory Data Analysis (EDA) - Definition, Motivation, Steps in data exploration, The basic datatypes, Data type Portability, Basic Tools of EDA, Data Analytics Life cycle, Discovery

|                 |  |                |
|-----------------|--|----------------|
| <b>Module:6</b> | <b>Data Handling and Visualization</b> | <b>6 hours</b> |
|-----------------|--|----------------|

Data Acquisition, Data Pre-processing and Preparation, Data Quality and Transformation, Handling Text Data; Introduction to data visualization, Visualization workflow: describing data visualization workflow, Visualization Periodic Table; Data Abstraction -Analysis: Four Levels for Validation- Task Abstraction - Analysis: Four Levels for Validation Data Representation: chart types: categorical, hierarchical, relational, temporal & spatial

|                 |  |                |
|-----------------|--|----------------|
| <b>Module:7</b> | <b>Data Science Tools and Techniques</b> | <b>4 hours</b> |
|-----------------|--|----------------|

Overview and Demonstration of Open source tools such as R, Octave, Scilab. Python libraries: SciPy and sci-kitLearn, PyBrain, Pylearn2; Weka.

|                 |                      |                |
|-----------------|----------------------|----------------|
| <b>Module:8</b> | <b>Recent Trends</b> | <b>2 hours</b> |
|-----------------|----------------------|----------------|

|                            |                 |
|----------------------------|-----------------|
| <b>Total Lecture hours</b> | <b>45 hours</b> |
|----------------------------|-----------------|

| <b>Course Objectives:</b>  |   |                           |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. To instill the basics of Machine Learning Concepts</li> <li>2. To be able to apply ML concepts in computing by making a choice of the suitable ML technique</li> <li>3. To practice tuning ML Models and address data inadequacies</li> <li>4. To be able to understand and enhance various classification models</li> <li>5. To be able to apply simple techniques like regression for powerful applications</li> <li>6. To gain an insight into parameters of supervised learning models like Clustering</li> <li>7. To understand the working of Neural Networks and the components involved</li> </ol> |   |                           |   |   |   |   |
| <b>Expected Course Outcome:</b>  |   |                           |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. Understanding the nuances of an ML sequence</li> <li>2. Derive an understanding of a Model's deficiency</li> <li>3. Gaining knowledge of mathematical concepts involved in Gradient Descent</li> <li>4. Appreciate the difference between Supervised and Unsupervised learning models</li> <li>5. Learn to apply accuracy metrics for various models</li> <li>6. Get an insight into Reinforced Learning approaches for Problem Solving</li> <li>7. Being able to understand Deep Networks and their potential in different fields</li> </ol>  |   |                           |   |   |   |   |
| <b>Module:1</b>  | <b>Introduction to Machine Learning</b> | <b>6 hours</b>            |   |   |   |   |
| Machine Learning – Types; Data – Getting the data, visualizing the data, preparing the data; Selecting and Training a Model – Fine tuning a Model: Grid Search – Randomized Search - Main Challenges: Data Inadequacy – Non-representativeness – Irrelevant features – Overfitting the Model – Underfitting the Model;   |   |                           |   |   |   |   |
| <b>Module:2</b>  | <b>SUPERVISED LEARNING TECHNIQUES</b>   | <b>8 hours</b>            |   |   |   |   |
| Binary Classifier – Performance Measures : Cross –Validation – Confusion Matrix –Precision and Recall – Multiclass classification – Mutli-label classification; Linear Regression – Gradient Descent: Batch Gradient – Stochastic Gradient Descent – Mini-batch Gradient Descent; Polynomial Regression –Logistic Regression –Estimating Probabilities, Decision Boundaries, Softmax Regression  |   |                           |   |   |   |   |
| <b>Module:3</b>  | <b>SUPPORT VECTOR MACHINES</b>          | <b>7 hours</b>            |   |   |   |   |

|   |  |                                      |
|---|--|--------------------------------------|
| Linear SVM with Soft Margin Classification – Non-linear SVM Classification: Polynomial features –Similarity features –Gaussian Kernel; SVM Regression   |  |                                      |
|   |  |                                      |
| <b>Module:4</b>   | <b>NEURAL NETWORKS</b>   | <b>6 hours</b>                       |
| Introduction to a Simple Neural Network – Computations – Output Layer of a Binary and a Multiclass problem, Choosing the right configuration, Loss Functions, Back Propagation                          |  |                                      |
|   |  |                                      |
| <b>Module:5</b>   | <b>DECISION TREES AND RANDOM FORESTS</b>   | <b>7 hours</b>                       |
| Training and Visualizing a Decision Tree –CART Algorithm – Gini Impurity; Bagging – Pasting – Random Forests – Boosting: Adaboost and Gradient Boosting –Stacking                                       |  |                                      |
|   |  |                                      |
| <b>Module:6</b>   | <b>DIMENSIONALITY REDUCTION</b>  | <b>4 hours</b>                       |
| Main approaches – Projection and Manifold Learning – PCA (Principal Component Analysis): Preserving the Variance – Principal Components – Projecting down to d Dimensions – Randomized PCA – Kernel PCA |  |                                      |
|   |  |                                      |
| <b>Module:7</b>   | <b>UNSUPERVISED LEARNING TECHNIQUES</b>  | <b>5 hours</b>                       |
| Clustering –Kmeans – Limitations –Clustering for Image Segmentation, Preprocessing , Semi-supervised learning – DBSCAN – Hierarchical – Partitional - Gaussian Mixtures                                 |  |                                      |
|   |  |                                      |
| <b>Module:8</b>   | <b>RECENT TRENDS</b>   | <b>2 hours</b>                       |
|   |  | <b>Total Lecture hours: 45 hours</b> |
| <b>Text Book(s)</b>   |  |                                      |
| 1.  | Aurelion Geron, Hands-On Machine Learning with Scikit – Learn, Keras and Tensorflow, 2 <sup>nd</sup> Edition, O.Reilly, 2019 |                                      |

| <b>Course Objectives:</b>  |  |                               |          |          |          |          |
| 1. To understand the various types of data, apply and evaluate the principles of data visualization<br>2. Acquire skills to apply visualization techniques to a problem and its associated dataset<br>3. To apply structured approach to create effective visualizations<br>4. To learn how to bring valuable insight from the massive dataset using visualization<br>5. To learn how to build visualization dashboard to support decision making<br>6. To create interactive visualization for better insight using various visualization tools |  |                               |          |          |          |          |
| <b>Expected Course Outcome:</b>  |  |                               |          |          |          |          |
| After successfully completing the course the student should be able to<br>1. Identify the different data types, visualization types to bring out the insight.<br>2. Relate the visualization towards the problem based on the dataset to analyze and bring out valuable insight on large dataset.<br>3. Design visualization dashboard to support the decision making on large scale data.<br>4. Demonstrate the analysis of large dataset using various visualization techniques and tools.   |  |                               |          |          |          |          |
| <b>Module:1</b>  | <b>Introduction to Data Visualization and Visualization techniques</b> | <b>6 hours</b>                |          |          |          |          |
| Overview of data visualization - Data Abstraction - Task Abstraction - Analysis: Four Levels for Validation. Visualization Techniques -Scalar and point techniques – colour maps – Contouring – Height Plots - Vector visualization techniques – Vector properties – Vector Glyphs – Vector Color Coding   |  |                               |          |          |          |          |
| <b>Module:2</b>  | <b>Visual Analytics</b>  | <b>5 hours</b>                |          |          |          |          |
| Visual Variables- Networks and Trees –Tables - Map Color and Other Channels- Manipulate View   |  |                               |          |          |          |          |
| <b>Module:3</b>  | <b>Visualization Tools</b>   | <b>6 hours</b>                |          |          |          |          |
| Fundamentals of R- Visualization using R library -Introduction to various data visualization tools- tableau  |  |                               |          |          |          |          |
| <b>Module:4</b>  | <b>Geo spatial visualization</b>                                       | <b>6 hours</b>                |          |          |          |          |
| Geo spatial data and visualization techniques : Chloropleth map, Hexagonal Binning, Dot map, Cluster map, cartogram map  |  |                               |          |          |          |          |
| <b>Module:5</b>  | <b>Diverse Types Of Visual Analysis</b>                                | <b>6 hours</b>                |          |          |          |          |
| Time- Series data visualization – Text data visualization – Matrix visualization techniques - Heat Map- Multivariate data visualization and case studies   |  |                               |          |          |          |          |
| <b>Module:6</b>  | <b>Visualization of Streaming Data</b>                                 | <b>7 hours</b>                |          |          |          |          |

|   |   |            |                            |
|---|---|------------|----------------------------|
| Introduction to Data Streaming, processing and presenting of streaming data, streaming visualization techniques, streaming analysis.  |   |            |                            |
| <b>Module:7</b>   | <b>Visualization Dashboard Creations</b>  |            | <b>7 hours</b>             |
| Dashboard creation using visualization tools for the use cases: Finance-marketing-insurance-healthcare etc.,  |   |            |                            |
| <b>Module:8</b>   | <b>Recent Trends</b>  |            | <b>2 hours</b>             |
|   |   |            | <b>Total Lecture hours</b> |
|   |   |            | <b>45 hours</b>            |
| <b>Text Books</b>   |   |            |                            |

| Pre-requisite   |   | Syllabus version v.1.1 |   |   |   |   |
| <b>Course Objectives:</b>   |   |                        |   |   |   |   |
| <ol style="list-style-type: none"> <li>To understand the basics of User Interface Design.</li> <li>To design the user interface, menu creation and windows creation</li> <li>To understand the concept of menus, windows, interfaces, business functions, various problems in windows design with colour, text, Non-anthropomorphic Design.</li> <li>To study the design process and evaluations</li> </ol>   |   |                        |   |   |   |   |
| <b>Expected Course Outcome:</b>   |   |                        |   |   |   |   |
| <ol style="list-style-type: none"> <li>Knowledge on development methodologies, evaluation techniques and user interface building tools</li> <li>Explore a representative range of design guidelines and gain experience in applying design guidelines to user interface design tasks.</li> <li>Ability to design their own Human Computer</li> <li>be able to perform task analysis for user interface design and usability analysis including heuristic analysis</li> <li>understand the innovative features of interactive system and be able to improve existing interfaces by considering these features</li> </ol> |   |                        |   |   |   |   |
| <b>Module:1</b>   | <b>INTERACTIVE SOFTWARE AND INTERACTION DEVICE</b>    | <b>4 hours</b>         |   |   |   |   |
| Human – Computer Interface – Characteristics Of Graphics Interface – Direct Manipulation Graphical System – Web User Interface – Popularity – Characteristic & Principles.  |   |                        |   |   |   |   |
| <b>Module:2</b>   | <b>HUMAN COMPUTER INTERACTION</b>                     | <b>4 hours</b>         |   |   |   |   |
| User Interface Design Process – Obstacles – Usability – Human Characteristics In Design – Human Interaction Speed – Business Functions – Requirement Analysis – Direct – Indirect Methods — Conceptual Model Design.  |   |                        |   |   |   |   |
| <b>Module:3</b>   | <b>USER INTERFACE DESIGN PRINCIPLES AND MODELS</b>    | <b>4hours</b>          |   |   |   |   |
| Shneiderman's eight golden rules, Norman's Seven principles, Norman's model of interaction, Nielsen's ten heuristics, Heuristic evaluation, contextual evaluation, Cognitive walk-through Keyboard Level Model- Application of the Keyboard Level Model, GOMS.  |   |                        |   |   |   |   |
| <b>Module:4</b>   | <b>HUMAN FACTORS IN UI DESIGN</b>                     | <b>4hours</b>          |   |   |   |   |
| Characteristics – Components – Presentation Styles – Types – Managements – Organizations – Operations – Web Systems – System Timings – Device – Based Controls Characteristics – Screen – Based Controls — Human Consideration In Screen Design – Structures Of Menus Operate Control – Text Boxes – Selection Control – Combination Control – Custom Control – Presentation Control.   |   |                        |   |   |   |   |
| <b>Module:5</b>   | <b>UI DESIGN PROCESS AND EVALUATION</b>               | <b>4 hours</b>         |   |   |   |   |
| User Interface Design Process - Usability Testing - Usability Requirements and Specification procedures and techniques - User Interface Design Evaluation.  |   |                        |   |   |   |   |
| <b>Module:6</b>   | <b>MULTIMEDIA &amp; MOBILE USER EXPERIENCE DESIGN</b> | <b>4 hours</b>         |   |   |   |   |
| Text For Web Pages – Effective Feedback – Guidance & Assistance – Internationalization – Accessibility – Icons – Image – Multimedia – Coloring.   |   |                        |   |   |   |   |

|  |  |                 |                 |

| <b>Module:1</b>   | <b>DATA STRUCTURES</b>           | <b>4 Hours</b>         |   |   |   |   |
| Problem solving using Python Data Structures : LIST, DICT, TUPLES and SET- Functions and Exceptions – Lamda Functions and Parallel processing – MAPS – Filtering - Itertools – Generators   |                                  |                        |   |   |   |   |
| <b>Module:2</b>   | <b>CLASSES AND OBJECTS</b>       | <b>4 Hours</b>         |   |   |   |   |
| Classes as User Defined Data Type ,Objects as Instances of Classes, Creating Class and Objects, Creating Objects By Passing Values, Variables & Methods in a Class Data Abstraction, Data Hiding, Encapsulation, Modularity, Inheritance, Polymorphism  |                                  |                        |   |   |   |   |
| <b>Module:3</b>   | <b>MULTITHREADING IN PYTHON</b>  | <b>4 Hours</b>         |   |   |   |   |
| Python Multithreading and Multiprocessing Multithreading and multiprocessing Basics – Threading module and example – Python multithreading - Multithreaded Priority Queue   |                                  |                        |   |   |   |   |
| <b>Module:4</b>   | <b>DATA PROCESSING</b>           | <b>5 Hours</b>         |   |   |   |   |
| Handling CSV, Excel and JSON data - Creating NumPy arrays, Indexing and slicing in NumPy, Downloading and parsing data, Creating multidimensional arrays, NumPy Data types, Array Attribute, Indexing and Slicing, Creating array views copies, Manipulating array shapes I/O – MATPLOTLIB  |                                  |                        |   |   |   |   |
| <b>Module:5</b>   | <b>DATA SCIENCE PERSPECTIVES</b> | <b>4 Hours</b>         |   |   |   |   |
| Using multilevel series, Series and Data Frames, Grouping, aggregating, Merge DataFrames, Generate summary tables, Group data into logical pieces, Manipulate dates, Creating metrics for analysis  |                                  |                        |   |   |   |   |
| <b>Module:6</b>   | <b>DATA HANDLING TECHNIQUES</b>  | <b>3 Hours</b>         |   |   |   |   |

|  |  |                 |
|--|--|-----------------|
| Data wrangling ,Merging and joining,- Loan Prediction Problem, Data Mugging using Pandas   |  |                 |
| <b>Module:7</b>  | <b>WEB APPLICATIONS</b>  | <b>4 Hours</b>  |
| Web Applications With Python – Django / Flask / Web2Py – Database Programming – NoSQL databases - Embedded Application using IOT Devices - Building a Predictive Model for IOT and Web programming |  |                 |
| <b>Module: 8</b>   | <b>RECENT TRENDS</b>   | <b>2 Hours</b>  |
| <b>Total Hours</b>   |  | <b>30 Hours</b> |

| <b>List of Experiments</b>   |  |                 |
| 1.   | Working with very large integers/different Data Formats  | 1 Hour          |
| 2.   | Rewriting an immutable string/String Manipulation  | 1 Hour          |
| 3.   | Using the Unicode characters that aren't in the keyboard   | 1 Hour          |
| 4.   | Encoding strings- ASCII and UTF 8  | 1 Hour          |
| 5.   | Writing list related type hints  | 2 Hours         |
| 6.   | Building sets with literals, adding, comprehensions and operators  | 2 Hours         |
| 7.   | Extending a built-in collection – a list that does statistics  | 2 Hours         |
| 8.   | Using properties for lazy attributes   | 2 Hours         |
| 9.   | Creating a breadboard prototype Circuit for IoT Program  | 3 Hours         |
| 10.  | Creating complex structures – maps of lists  | 3 Hours         |
| 11.  | Using Flask framework for RESTful APIs   | 3 Hours         |
| 12.  | Implementing authentication for Web Services   | 3 Hours         |
| 13.  | Application Integration  | 3 Hours         |

|  |                 |
|--|-----------------|
| 14. Combining many applications using Command Design Pattern | 3 Hours         |
| <b>Total Hours</b>   | <b>30 Hours</b> |

| 1. Learn the latest 4G networks and LTE<br>2. Understand about the wireless standards and design.<br>3. Understand about the wireless network architecture and its concepts.<br>4.Learn wireless Technologies and protocols<br>5.Understand about the mobility management and cellular network.<br>6.Learn the security concepts of wireless networks and also the recent trends. |                               |                           |   |   |   |   |
| <b>Module:1</b>   | <b>Introduction</b>           | <b>7 hours</b>            |   |   |   |   |
| Introduction to 1G/2G/3G/4G Terminology. Evolution of Public Mobile Services -Motivation for IP Based Wireless Networks -Requirements and Targets for Long Term Evolution (LTE) - Technologies for LTE- 4G Advanced Features and Roadmap Evolutions from LTE to LTEA  |                               |                           |   |   |   |   |
| <b>Module:2</b>   | <b>Standards and Design</b>   | <b>5 hours</b>            |   |   |   |   |
| Wireless systems and standards. Wireless LANs: Wireless LAN technology. Wireless standard (IEEE 802.11 etc.) and Other IEEE 802.11 Standards  |                               |                           |   |   |   |   |
| <b>Module:3</b>   | <b>Wireless Architectures</b> | <b>7 hours</b>            |   |   |   |   |
| 3GPP Packet Data Networks - Network Architecture - Packet Data Protocol (PDP) Context - Configuring PDP Addresses on Mobile Stations - Accessing IP Networks through PS Domain – LTE network Architecture - Roaming Architecture- Protocol Architecture   |                               |                           |   |   |   |   |
| <b>Module:4</b>   | <b>Wireless technologies</b>  | <b>7 hours</b>            |   |   |   |   |
| Cellular wireless networks and systems principles. Antennas and radio propagation. Signal encoding and modulation techniques., advanced modulation and coding, medium access  |                               |                           |   |   |   |   |

|   |  |                 |
|---|--|-----------------|
| techniques, cognitive radio and dynamic spectrum access networks, Static and dynamic channel allocation techniques  |  |                 |
|   |  |                 |
| <b>Module:5</b>   | <b>Wireless Protocols</b>  | <b>6 hours</b>  |
| MAC Protocols, The Mediation Device Protocol, Contention based protocols - PAMAS, Schedule based protocols – LEACH, IEEE 802.15.4 MAC protocol, Challenges and Issues in Transport layer protocol. Routing protocols- data centric routing protocols, hierarchical routing protocols, location based routing, energy efficient routing. |  |                 |
|   |  |                 |
| <b>Module:6</b>   | <b>Mobility Management</b>   | <b>5 hours</b>  |
| Cellular Networks-Cellular Systems with Prioritized Handoff-Cell Residing Time Distribution<br>Mobility Prediction in Pico- and Micro-Cellular Networks   |  |                 |
|   |  |                 |
| <b>Module:7</b>   | <b>Wireless Network Security</b>   | <b>6 hours</b>  |
| Network Security Requirements, Issues and Challenges in Security Provisioning, Network Security Attacks, Layer wise attacks in wireless networks, possible solutions for jamming, tampering, black hole attack, flooding attack. Key Distribution and Management, Secure Routing  |  |                 |
|   |  |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>   | <b>2 hours</b>  |

Analyse the various data mining tasks for multimedia and complex data.</li> </ol> |  |                                |   |   |   |   |
| Module 1   | <b>DATA WAREHOUSE</b>                                | 4 Hours                        |   |   |   |   |
| Introduction: Data Warehouse and OLAP Technology for Data Mining: Data Warehouse, Multidimensional Data Model, Data Warehouse Architecture, Data Warehouse Implementation, Further Development of Data Cube Technology, From Data Warehousing to Data Mining Data Cube Computation and Data Generalization: Efficient Methods for Data Cube Computation, Further Development of Data Cube and OLAP Technology, Attribute-Oriented Induction.   |  |                                |   |   |   |   |
| Module 2   | <b>DATA PREPROCESSING</b>                            | 4 Hours                        |   |   |   |   |
| Data, Types of Data, Attributes and Measurement, Types of Data Sets, Data Quality, Measurement and Data Collection Issues, Issues Related to Applications, Data pre-processing, Aggregation, Sampling, Dimensionality Reduction, Feature Subset Selection, Feature Creation, Discretization and Binarization, Variable Transformation, Similarity and Dissimilarity between Simple Attributes, Dissimilarities between Data Objects, Similarities between Data Objects.  |  |                                |   |   |   |   |
| Module 3   | <b>ASSOCIATION ANALYSIS: CONCEPTS AND ALGORITHMS</b> | 7 Hours                        |   |   |   |   |
| Frequent Itemset Generation, The Apriori Principle, Apriori Algorithm- Rule Generation- Candidate Generation and Pruning, Support Counting, Computational Complexity, Confidence-Based Pruning, Compact Representation of Frequent Itemsets, Maximal and Closed Frequent Itemsets, Alternative Methods for Generating Frequent Itemsets, FP-Growth Algorithm, FP-Tree Representation, Evaluation of Association Patterns, Handling Categorical Attributes, Handling Continuous Attributes, Discretization-Based Methods, Statistics-Based Methods, Non-discretization Methods, Sequential Pattern Discovery.   |  |                                |   |   |   |   |
| Module 4   | <b>CLASSIFICATION AND PREDICTION</b>                 | 7 Hours                        |   |   |   |   |
| Classification - issues regarding classification and prediction -Decision Tree Induction-Bayesian  |  |                                |   |   |   |   |

|   |  |                 |
|---|--|-----------------|
| classification – Support Vector Machines, Rule-Based Classification- Associative Classification Prediction, Rationale for Ensemble Method, Methods for Constructing an Ensemble Classifier, Bias-Variance Decomposition, Bagging, Boosting, Random Forests, Empirical Comparison among Ensemble Methods   |  |                 |
| Module 5  | <b>CLUSTER ANALYSIS AND OUTLIER ANALYSIS</b>   | 7 Hours         |
| Types of Data in cluster analysis, - Major clustering methods- The k-Means Method, Agglomerative Hierarchical Clustering, Cluster Evaluation, Outlier Analysis- Distance-Based Outlier Detection-Density-Based Local Outlier Detection  |  |                 |
| Module 6  | <b>MINING OF STREAM DATA</b>   | 7 Hours         |
| Mining Streams, Time Series and Sequence Data: Mining Data Streams, Mining Time-Series Data, Mining Sequence Patterns in Transactional Databases, Mining Sequence Patterns in Biological Data, Graph Mining, Social Network Analysis and Multirelational Data Mining  |  |                 |
| Module 7  | <b>MULTIMEDIA AND COMPLEX DATA MINING</b>  | 7 Hours         |
| Mining Object, Spatial, Multimedia, Text and Web Data: Multidimensional Analysis and Descriptive Mining of Complex Data Objects, Spatial Data Mining, Multimedia Data Mining, Text Mining, Mining the World Wide Web.   |  |                 |
| Module 8  | <b>RECENT TRENDS</b>   | <b>2 Hours</b>  |
| <b>Total Hours:</b>   |  | <b>45 Hours</b> |
| <b>TEXT BOOKS:</b>  |  |                 |
| <ol style="list-style-type: none"> <li>1. Bhatia, Parteek, “Data mining and data warehousing: principles and practical techniques”. Cambridge University Press, 1st Edition, 2019.</li> <li>2. Karaa, Wahiba Ben Abdessalem, and Nilanjan Dey. <i>Mining multimedia documents</i>. CRC Press, 2017.</li> </ol>  |  |                 |
| <b>REFERENCE BOOKS:</b>   |  |                 |

| Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar   |  |                 |
| <b>List of Experiments</b>  |  |                 |
| 1.  | Build Data Warehouse and Explore WEKA  | 3 hours         |
| 2.  | Introduction to exploratory data analysis using R  | 3 hours         |
| 3.  | Demonstrate the Descriptive Statistics for a sample data like mean, median, variance and correlation etc., | 3 hours         |
| 4.  | Demonstrate Missing value analysis and different plots using sample data.                                  | 3 hours         |
| 5.  | Demonstration of apriori algorithm on various data sets with varying confidence (%) and support (%).       | 3 hours         |

|                                      |   |                  |
|--------------------------------------|---|------------------|
|                                      |   |                  |
| 6.                                   | Demo on Classification Techniques using sample data Decision Tree, ID3 or CART. | 3 hours          |
| 7.                                   | Demonstration of Clustering Techniques K-Mean and Hierarchical.                 | 3 hours          |
| 8.                                   | Demo on Classification Technique using KNN.                                     | 3 hours          |
| 9.                                   | Demonstration on Document Similarity Techniques and measurements.               | 3 hours          |
| 10.                                  | Demo on Classification Technique for multimedia data                            | 3 hours          |
| Mode of evaluation: Project/Activity |   |                  |

| <b>Module:1</b>  | <b>Introduction to Internet of Things</b>             | <b>5 Hours</b>                |          |          |          |          |
| Introduction to IoT - Sensing, Actuation, Networking basics, Communication protocols, Sensor networks, M2M Communications, IoT characteristics. IoT Architecture - IoT functional blocks, Physical design of IoT, Logical design of IoT and Communication models.  |   |                               |          |          |          |          |
| <b>Module:2</b>  | <b>An IoT Architectural Overview</b>                  | <b>6 Hours</b>                |          |          |          |          |
| An Architectural Overview - An IoT architecture outline, Main design principles and needed capabilities, standards considerations. IoT Reference Architecture- Introduction, Functional View, Information View, Deployment and Operational View, Other Relevant architectural views. M2M and IoT technology fundamentals - Devices and gateways, Local and wide area networking, Data management, Business process in IoT, Everything as a service (XaaS), M2M and IoT analytics, knowledge management.                                  |   |                               |          |          |          |          |
| <b>Module:3</b>  | <b>IoT Protocols and Point-to-Point Communication</b> | <b>7 hours</b>                |          |          |          |          |
| IoT protocols and softwares - MQTT, UDP, MQTT brokers, Publish-subscribe modes, HTTP, CoAP, XMPP, and Gateway protocols. IoT point-to-point communication technologies - Communication pattern, and IoT protocol architecture. Selection of wireless technologies -  |   |                               |          |          |          |          |

|   |   |                 |
|---|---|-----------------|
| LoWPAN, Zigbee, WiFi, BLE, SIG, NFC, LoRa, LiFi, and WiDi.  |   |                 |
|   |   |                 |
| <b>Module:4</b>   | <b>Programming with Microcontrollers</b>  | <b>6 hours</b>  |
| Architecture of Microcontroller IDE, Setup the Microcontroller IDE, Developing a Microcontroller program, libraries, Basics of embedded C programming for Microcontroller, Interfacing with sensors & actuators - LED, push button, ultrasonic, and buzzer, Arduino interfacing with LCD, Working with digital and analog sensors - Temperature, Gas, Humidity, Motion, and Light sensors.          |   |                 |
|   |   |                 |
| <b>Module:5</b>   | <b>Advanced Programming with Microcontrollers</b>   | <b>7 hours</b>  |
| Microcontroller interfacing with Relay Switch and Servo Motor, Basic networking with ESP8266 WiFi module, Microcontroller interfacing with Wi-Fi module, TinkerCAD simulation, Thing speak cloud synchronization with Wi-Fi module, Posting data to Thinkspeak cloud, Receiving data from Thing speak, Various other cloud services available in the market.  |   |                 |
|   |   |                 |
| <b>Module:6</b>   | <b>Developing IoT Solutions</b>   | <b>8 hours</b>  |
| Comparison of various Rpi Models, Understand SoC architecture, Raspberry Pi Pin description, Raspberry Pi on-board components, Rpi operating system and Linux commands, First boot and basic configuration, Introduction to python - keywords, operators, data structures, flow control, and python libraries, Sensor interfacing - Temperature and humidity sensor (DHT11), and Ultrasonic sensor. |   |                 |
|   |   |                 |
| <b>Module:7</b>   | <b>Case Studies</b>   | <b>4 hours</b>  |
| Smart city, Smart health monitoring system, Smart irrigation system for farmers, Smart security for home, and Smart electrical appliances at Home.  |   |                 |
|   |   |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>  | <b>2 hours</b>  |
|   |   |                 |
|   | <b>Total hours:</b>   | <b>45 hours</b> |

| <b>List of Experiments</b>  |  |            |                 |
| 1.  | The process of setting up a platform for Microcontroller programming.  | 3 hours    |                 |
| 2.  | Write a program in to display binary pattern on three LEDs   | 2 hours    |                 |
| 3.  | Design an experiment to identify the room temperature and humidity and turn on/off the LED based on the threshold considered.  | 2 hours    |                 |
| 4.  | Write a program to interface with Bluetooth sensor that switches ON/OFF the LED based on the input 0/1.  | 3 hours    |                 |
| 5.  | Write a program to interface with temperature and humidity sensors and store the information in Thingspeak cloud.  | 3 hours    |                 |
| 6.  | Write a program to rotate the servo motor in clockwise or anti-clockwise direction based on the value received from Thinkspeak cloud. If input is 0, then clockwise. Else, anti-clockwise. | 3 hours    |                 |
| 7.  | Write a program to display the level of garbage bin in the smartphone, and Thingspeak based on the information received from the bin using an ultrasonic sensor.                           | 3 hours    |                 |
| 8.  | Write a program to collect the temperature or humidity information.  | 2 hours    |                 |
| 9.  | Write a program to turn on/off the LED based on the pushbutton input.  | 2 hours    |                 |
| 10.   | Write a program to collect the information from temperature sensor and send it to MQTT broker.   | 3hours     |                 |
| 11.   | Implement a Theft detection application.   | 4 hours    |                 |
| Total Laboratory Hours  |  |            | 30 hours        |
| Mode of evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar |  |            |                 |

| Architecture of a back propagation network, Backpropagation learning, Effect of tuning parameters, Selection of parameters in back propagation network, Application domains.  |                                       |                               |          |          |          |          |

|   |  |                 |
|---|--|-----------------|
| <b>Module:3</b>   | <b>Unsupervised learning networks</b>  | <b>6 hours</b>  |
| Neural Nets based on competition, Max net, Mexican Hat, Hamming net, Kohonen Self organizing Feature Map, Counter propagation, Learning Vector Quantization , Adaptive Resonance Theory   |  |                 |
| <b>Module:4</b>   | <b>Fuzzy Sets and Fuzzy Relations</b>  | <b>6 hours</b>  |
| Introduction, Classical sets and fuzzy sets, Crisp Sets, Classical relations and fuzzy relations, membership functions , Fuzzy set operations, Properties of Fuzzy sets, Fuzzy to crisp conversion  |  |                 |
| <b>Module 5</b>   | <b>Advanced AI Techniques and Rough set concepts</b>   | <b>7 hours</b>  |
| Swarm Intelligence (SI), Particle swarm optimization (PSO), Ant Colony Optimization, Petrinets, Coloured Petrinets, Entropy, Rough sets, Rough set theory, Set approximation, Rough membership, Attributes, Dependency of attributes, Rough equivalence, Reducts, Rough Reducts based on SVM                    |  |                 |
| <b>Module:6</b>   | <b>Fuzzy Logic and Inference</b>   | <b>6 hours</b>  |
| Fuzzy Logic, Predicate Logic, Fuzzy Quantifiers, Fuzzy Inference , Fuzzy knowledge and rule based system, Fuzzy decision making, Defuzzification, Applications of fuzzy logic, Neuro Fuzzy modelling  |  |                 |
| <b>Module:7</b>   | <b>Genetic Algorithms</b>  | <b>6 hours</b>  |
| Basic concepts, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional method |  |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>   | <b>2 hours</b>  |
| <b>Total Lecture hours:</b>   |  | <b>45 hours</b> |
| <b>Text Book(s)</b>   |  |                 |

| <b>Course Objectives:</b>  |  |                           |   |   |   |                |
| 1. To provide students with contemporary knowledge in distributed systems  |  |                           |   |   |   |                |
| 2. To equip students with skills to analyze and design distributed applications.   |  |                           |   |   |   |                |
| 3. To provide master skills to measure the performance of distributed synchronization algorithms   |  |                           |   |   |   |                |
| <b>Expected Course Outcome:</b>  |  |                           |   |   |   |                |
| 1. Elucidate the foundations and issues of distributed systems   |  |                           |   |   |   |                |
| 2. Understand the various synchronization issues and global state for distributed systems.   |  |                           |   |   |   |                |
| 3. Implement the Mutual Exclusion and Deadlock detection algorithms in distributed systems   |  |                           |   |   |   |                |
| 4. Explore the agreement protocols and fault tolerance mechanisms in distributed systems.  |  |                           |   |   |   |                |
| 5. Describe the features of peer-to-peer and distributed shared memory systems   |  |                           |   |   |   |                |
| 6. Demonstrate the concepts of Resource and Process management and synchronization algorithm   |  |                           |   |   |   |                |
|  |  |                           |   |   |   |                |
| <b>Module:1</b>  | <b>Introduction</b>                              |                           |   |   |   | <b>6 hours</b> |
| Introduction to Distributed Systems - Examples –Trends in Distributed Systems – Focus on resource sharing – System Models – Networking and Internetworking – Inter process Communications. |  |                           |   |   |   |                |
|  |  |                           |   |   |   |                |
| <b>Module:2</b>  | <b>Distributed objects and Remote invocation</b> |                           |   |   |   | <b>6 hours</b> |
| Publish-subscribe system – message queues – shared memory approach. Remote procedure call – distributed objects-communication between distributed objects – RMI – JSON-RMI                 |  |                           |   |   |   |                |
|  |  |                           |   |   |   |                |
| <b>Module:3</b>  | <b>Message Ordering and Snapshots</b>            |                           |   |   |   | <b>7 hours</b> |
| Message ordering and group communication: Message ordering paradigms -Asynchronous execution with synchronous communication -Synchronous program order on an asynchronous                  |  |                           |   |   |   |                |

|   |   |                 |
|---|---|-----------------|
| system -Group communication – Causal order (CO) – Total order. Global state and snapshot recording algorithms: Introduction -System model and definitions -Snapshot algorithms for FIFO channels  |   |                 |
|   |   |                 |
| <b>Module:4</b>   | <b>Distributed Mutex and Deadlock</b>   | <b>6 hours</b>  |
| Distributed mutual exclusion algorithms: Introduction – Preliminaries – Lamports algorithm - Ricart-Agrawala algorithm Deadlock detection in distributed systems: Introduction – System model – Preliminaries -Models of deadlocks – Knapps classification – Algorithms for the single resource model |   |                 |
|   |   |                 |
| <b>Module:5</b>   | <b>Concurrency control</b>  | <b>6 hours</b>  |
| Distributed deadlock – Resource allocation model - requirements and performance metrics - classification of distributed deadlock detection algorithm  |   |                 |
|   |   |                 |
| <b>Module:6</b>   | <b>Peer To Peer and Distributed Shared Memory</b>   | <b>6 hours</b>  |
| Peer-to-peer computing and overlay graphs: Introduction – Data indexing and overlays – Chord – Content addressable networks – Tapestry. Distributed shared memory: Abstraction and advantages – Memory consistency models -Shared memory Mutual Exclusion.  |   |                 |
|   |   |                 |
| <b>Module:7</b>   | <b>Process and Resource Management</b>  | <b>6 hours</b>  |
| Process Management: Process Migration: Features, Mechanism – Threads: Models, Issues, Implementation. Resource Management: Introduction- Features of Scheduling Algorithms –Task Assignment Approach – Load Balancing Approach – Load Sharing Approach.   |   |                 |
|   |   |                 |
| <b>Module:8</b>   | <b>Contemporary issues:</b>   | <b>2 hours</b>  |
|   |   |                 |
|   |   |                 |

To acquire and implement the learning relate to 2D and 3D concepts in graphics programming.</li> <li>3. To comprehend the elementary 3D modeling and rendering techniques.</li> <li>4. To analyze the fundamentals of multimedia towards its representations, perceptions, communication and applications.</li> </ol>  |  |                               |          |          |          |          |
| <b>Expected Course Outcome:</b>   |  |                               |          |          |          |          |
| <ol style="list-style-type: none"> <li>1. Interpret the basic components of the graphics system and the color models.</li> <li>2. Design and demonstrate the basic graphical output primitives.</li> <li>3. Perform two and three dimensional transformations and viewing</li> <li>4. Describe and apply methods to model and render 3D objects.</li> <li>5. Identify and describe the function of the general skill sets in the multimedia systems..</li> <li>6. Expand the knowledge about the multimedia and its communication standards.</li> </ol> |  |                               |          |          |          |          |
| <b>Module:1</b>   | <b>Graphical Concepts and Display Systems</b>      | <b>6 hours</b>                |          |          |          |          |
| Graphics Systems: Video Display Devices – Types – Raster-Scan Systems and Random-Scan Systems – Input Devices – Hard-Copy Devices – Graphics Software; color models.  |  |                               |          |          |          |          |
| <b>Module:2</b>   | <b>Output Primitives</b>                           | <b>6 hours</b>                |          |          |          |          |
| Output Primitives: Points and lines – Line Drawing Algorithm: DDA and Bresenham’s Algorithm – Midpoint Circle Generating Algorithm – Line Attributes – Color and Grayscale Levels.  |  |                               |          |          |          |          |
| <b>Module:3</b>   | <b>2-D Geometrical Transformations and Viewing</b> | <b>7 hours</b>                |          |          |          |          |
| Basic Transformations – Matrix Representations and Homogeneous Coordinates – Composite Transformations; Viewing: pipeline – Window-to- Viewport Coordinate Transformation; Clipping: point, line and polygon clipping algorithms  |  |                               |          |          |          |          |
| <b>Module:4</b>   | <b>3-D Geometrical Transformations and Viewing</b> | <b>6 hours</b>                |          |          |          |          |
| Three dimensional concepts; 3-D transformations: Basic, Other and Composite Transformations; Viewing: Parallel and Perspective Projections  |  |                               |          |          |          |          |

|   |   |                 |
|---|---|-----------------|
| <b>Module:5</b>   | <b>Modeling and Rendering Techniques</b>  | <b>6 hours</b>  |
| Visible surface determination - Z-Buffer method, Scan line method, Depth sorting Method, raytracing, Shading Model - Gouraud and Phong Shading. |   |                 |
| <b>Module:6</b>   | <b>Multimedia System Design</b>   | <b>6 hours</b>  |
| Multimedia basics – Components of Multimedia – Multimedia applications – Multimedia Authoring – Hypermedia.                                     |   |                 |
| <b>Module:7</b>   | <b>Multimedia and Communication Standards</b>   | <b>6 hours</b>  |
| Digitization of Sound – Quantization of Audio – Transmission of Audio – Multimedia communication standards – JPEG, MPEG.                        |   |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>  | <b>2 hours</b>  |
| <b>Total Lecture hours:</b>   |   | <b>45 hours</b> |
| <b>Text Book(s)</b>   |   |                 |

|---|-----------------------------------|---------------------------|---|---|---|---|
| CSI3013   | BLOCKCHAIN TECHNOLOGIES           | 3                         | 0 | 0 | 4 | 4 |
| Pre-requisite   | Nil                               | Syllabus version<br>v.1.0 |   |   |   |   |
| <b>Course Objectives:</b>   |                                   |                           |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. To provide a conceptual understanding on the function of Blockchain.</li> <li>2. To discuss the functional elements of the bitcoin and its mining process.</li> <li>3. To introduce the Ethereum and solidity platform</li> <li>4. To understand how blockchain is applied to different aspects of the business.</li> <li>5. To describe current Hyperledger projects and cross-industry use cases</li> </ol>   |                                   |                           |   |   |   |   |
| <b>Expected Course Outcome:</b>   |                                   |                           |   |   |   |   |
| At the end of this course, students will be able to:  |                                   |                           |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. Understand the basics of cryptographic hash functions and blockchain</li> <li>2. Demonstrate the functional blocks of the bitcoin and cryptocurrencies</li> <li>3. Describe the consensus algorithms and its challenges</li> <li>4. Design the distributed application using Ethereum platform</li> <li>5. Construct the solution by design and development of the smart contract using solidity</li> <li>6. Identify and select suitable blockchain based applications</li> <li>7. Analyze the challenges and issues in blockchain applications</li> </ol> |                                   |                           |   |   |   |   |
| <b>Module:1</b>   | <b>BLOCKCHAIN FOUNDATIONS</b>     | <b>7 hours</b>            |   |   |   |   |
| Blockchain & Distributed Ledger Technology (DLT) - Elements of Distributed Computing: Distributed Database, Two General Problem, Byzantine General problem and Fault Tolerance, Hadoop Distributed File System, Distributed Hash Table - Elements of Cryptography: Hash function, Properties of a hash function, Puzzle friendly Hash, Collision resistant hash, digital signatures, public key crypto, verifiable random functions - ECDSA, Memory Hard Algorithm, Zero Knowledge Proof, Hash pointer and Merkle tree.   |                                   |                           |   |   |   |   |
| <b>Module:2</b>   | <b>BITCOIN AND CRYPTOCURRENCY</b> | <b>7 hours</b>            |   |   |   |   |
| A basic crypto currency, Creation of coins, Payments and double spending, FORTH – the precursor for Bitcoin scripting, Bitcoin - Wallet - Blocks - Bitcoin Scripts, Bitcoin P2P Network, Transaction in Bitcoin Network, Block Mining, Block propagation and block relay  |                                   |                           |   |   |   |   |
| <b>Module:3</b>   | <b>DISTRIBUTED CONSENSUS</b>      | <b>7 hours</b>            |   |   |   |   |
| Consensus introduction -Consensus in a Bitcoin network - Distributed Consensus, Merkle Patricia   |                                   |                           |   |   |   |   |

|   |  |                 |
|---|--|-----------------|
| Tree, Gas Limit, Transactions and Fee, Anonymity, Reward, Chain Policy, Life of Blockchain application, Soft & Hard Fork, Private and Public blockchain - Nakamoto consensus, Proof of Work, Proof of Stake, Proof of Burn, Difficulty Level, Sybil Attack, Energy utilization and alternate.   |  |                 |
|   |  |                 |
| <b>Module:4</b>   | <b>HYPHER LEDGER FABRIC &amp; ETHERUM</b>    | <b>7 hours</b>  |
| Architecture of Hyperledger fabric v1.1-Introduction to hyperledger fabric v1.1, chain code-Ethereum: Ethereum network, EVM, Transaction fee, Mist Browser, Ether, Gas, Solidity, Smart contracts, TruffleDesign and issue Crypto currency, Mining, DApps, DAO  |  |                 |
|   |  |                 |
| <b>Module:5</b>   | <b>SMART CONTRACTS</b>                       | <b>7 hours</b>  |
| Smart Contract Basics - Processing Smart Contracts - Deploying Smart Contracts - Solidity: Structure, Basic Data Types & Statements, Access Modifiers & Applications - Best Practices: Evaluating Smart Contracts   |  |                 |
|   |  |                 |
| <b>Module:6</b>   | <b>BLOCKCHAIN APPLICATIONS</b>               | <b>5 hours</b>  |
| Blockchain and Enterprise - Use Case: Blockchains for Trade Finance, Blockchains for Supply Chain Financing, Cross Border Connectivity - Trusted Data Transfer, Capital Markets, Government Services & Sustainable Livelihood, Ownership and property rights, Internet of Things, Medical Record Management System, Domain Name Service and future of Blockchain - Blockchain Tradeoffs across Multichain, Ripple, Corda, EOS & Cosmos Facebook Libra & Corporate Currencies - CBDC & its paradoxes |  |                 |
|   |  |                 |
| <b>Module:7</b>   | <b>BLOCKCHAIN CHALLENGES AND CONSTRAINTS</b> | <b>3 hours</b>  |
| Blockchain risks - Technological challenges - Standards - Scalability issues - Security and privacy - Legal and regulatory problems - Social and cultural constraints - The future of blockchain technology, AI, and digital privacy  |  |                 |
|   |  |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>                         | <b>2 hours</b>  |
|   |  |                 |
|   | <b>Total hours:</b>                          | <b>45 hours</b> |

| <b>Text Book(s)</b>  |   |            |                 |

|   |  |         |
|---|--|---------|
| Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar |  |         |
| <b>List of Experiments :</b>  |  |         |
| 1.  | <p>Create a user registration webpage using HTML Form elements (Input types) for a hackathon event registration. The webpage must contain the following input types to get the details of the students</p> <p>Input Types:- Textfields, Textarea, checkbox, radio button, submit button, reset button, drop down box, images (if required).</p> <p>Apply styles, Formatting tags of HTML for good design.</p> <p>Use HTML 5 new input types to display additional contents</p>   | 2 hours |
| 2   | <p>CSS – internal, external and inline</p> <p>a. Apply CSS to a shopping site having two branches with different localized content, the website being hosted on a local web server. Add an unordered list and an image to your web page, Create a html file that contains a heading and a couple of paragraphs, modify a button with which it is possible to change the text that is shown on the screen, add buttons to enlarge or shrink featured images, Modify the CSS style definition so that the initial width of a rectangle border is 6 pixels, Improve the Guess-A-Word game, Object Oriented Programming with JavaScript, Add CSS definitions so that &lt;td&gt; elements that represent days of the previous month will have a different color, improve webpage so that you draw a brick-wall behind the picture shown, draw_on_canvas () function</p> | 3 hours |
| 3.  | <p>Design the following using JavaScript and DOM</p> <p>a) Given an array of words, write a javascript code to count the number of vowels and number of consonants in each word. Use Regular Expressions.</p> <p>b) Include Image Slide Show Digital clock, Survey Poll to make your webpage</p> <p>i) Dynamic.</p> <p>Develop a web application to implement online quiz system. The application includes only client side script</p>   | 2 hours |
| 4.  | <p>Create a popup Login form using jQuery which appears at the center of screen on loading the page after a specified time interval. Include Captcha text in the login page.</p>   | 2 hours |
| 5.  | <p>a) Validate the Event Registration Form given below using JQuery for the following conditions.</p>  | 4 hours |

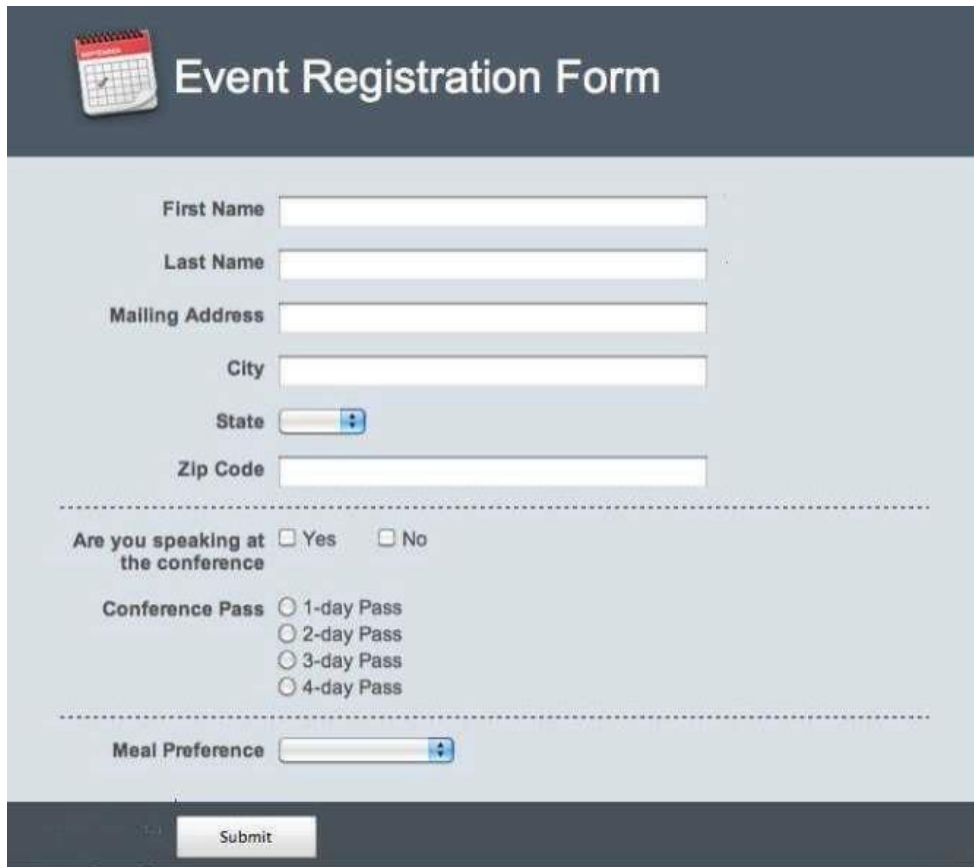

All fields are mandatory

Zip code should be exactly five digits

Email validation

b) Create a JSON file for a list of cities. Provide autocomplete option for city field using the

JSON file as source.

6. Using Angular JS, add names that are entered in textbox to the list and clear the textbox once the name is added to list.

|----|--|---------|
| 7. | <p>Design a shopping cart application using AngularJS. Your shopping webpage should have the provisions for selecting the list of items from different category, Once the items are selected on clicking the submit button the items in the cart with its price should be displayed. Sample design is given below.</p>                             | 3 hours |
| 8. | <p>Create a MongoDB collection of “books” with the following details: <b><i>Title, ISBN(unique id), Authors, Publication ,Year of Publication and Price.</i></b></p> <p>Write commands for the following:</p> <ol style="list-style-type: none"> <li>Insert a new document with multiple authors.</li> <li>Update a document with change in price</li> <li>Remove documents with year of publication lesser than 1990.</li> </ol>    | 3 hours |
| 9. | <p>A MongoDB collection of words has the document structure as:</p> <pre data-bbox="256 1245 573 1623"> { word:&lt;word&gt;, first:&lt;first_letter&gt;, last:&lt;last_letter&gt;, size: &lt;character_count&gt; } </pre> <p>Perform the following operations on those documents using Nodejs.</p> <p>Find the set of words which starts with letters „a“,“b“ or „c“.</p> <p>Find the set of words which exactly has 12 letters.</p> | 2 hours |

|                                      |   |                 |
|--------------------------------------|---|-----------------|
|                                      | Count the number of words that starts and ends with a vowel.<br><br>Find the first ten words that end with the letter „e“ and display it in descending order.   |                 |
| 10.                                  | Write a NodeJs program to perform debit operation for a bank account. The HTML form should get input for the account no and the amount to be debited. The entered amount has to be reduced from their balance. In the database maintain account number and balance  | 2 hours         |
| 11.                                  | a. Develop a thesaurus tool by creating a schema for thesaurus. When a word is entered the synonyms or antonyms must be displayed based on the user request.<br>b. XSL – Create an employee information system using XML and display the employee number and name of employees with salary greater than Rs. 100000 p/m. with XSL.<br>c. Develop a thesaurus tool by creating a schema for thesaurus. When a word is entered the synonyms or antonyms must be displayed based on the user request. | 3 hours         |

| <b>Course Objectives:</b>  |   |                           |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. Learn the fundamental of advanced data compression techniques</li> <li>2. To introduce students to basic applications, concepts, and techniques of Data Compression.</li> <li>3. To develop skills for using recent data compression software to solve practical problems in a variety of disciplines.</li> <li>4. To gain experience doing independent study and research.</li> </ol>                                 |   |                           |   |   |   |   |
| <b>Expected Course Outcome:</b>  |   |                           |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. Understand the importance of Data compression</li> <li>2. Comprehend the idea of lossless and lossy compression</li> <li>3. Understand the most common file formats for image, sound and video</li> <li>4. Develop a reasonably sophisticated data compression application.</li> <li>5. Select methods and techniques appropriate for the task</li> <li>6. Develop the methods and tools for the given task</li> </ol> |   |                           |   |   |   |   |
| <b>Module:1</b>  | <b>Introduction</b>                         | <b>4 hours</b>            |   |   |   |   |
| Introduction to Compression techniques – Modeling and coding – Mathematical preliminaries for Lossless compression – Entropy – Information Value – Data Redundancy - Application of compression  |   |                           |   |   |   |   |
| <b>Module:2</b>  | <b>Basic Concepts of Information Theory</b> | <b>6 hours</b>            |   |   |   |   |
| Concepts of information theory – Models and Coding – Algorithmic information theory – Physical Models – Probability models – Markov models.  |   |                           |   |   |   |   |
| <b>Module:3</b>  | <b>Arithmetic Coding</b>                    | <b>5 hours</b>            |   |   |   |   |
| Shannon-Fano Algorithm – Huffman Algorithm – Adaptive Huffman Coding – Golomb codes – Rice codes – Tunstall codes – Applications of Huffman coding.  |   |                           |   |   |   |   |
| <b>Module:4</b>  | <b>Loss Less Coding</b>                     | <b>6 hours</b>            |   |   |   |   |

|   |  |            |                 |
|---|--|------------|-----------------|
| Dictionary Methods: LZ77, LZ78, LZW Algorithms – Lossless Compression standards zip, gzip, bzip, unix compress, GIF, JBIG – Dynamic Markov Compression.   |  |            |                 |
|   |  |            |                 |
| <b>Module:5</b>   | <b>Basics Of Lossy Coding &amp; Vector Quantization</b>                                      |            | <b>5 hours</b>  |
| Basics of lossy coding and mathematical concepts – Distortion criteria – Scalar quantization - The Quantization problem – Uniform quantizer – Adaptive quantization – Advantages of vector quantization over scalar quantization – LBG algorithm. |  |            |                 |
|   |  |            |                 |
| <b>Module:6</b>   | <b>Image &amp; Video Compression</b>   |            | <b>6 hours</b>  |
| Image Compression: Discrete Cosine Transform – JPEG – Video Compression: Motion Compensation – Temporal and Spatial Prediction - MPEG and H.264.  |  |            |                 |
|   |  |            |                 |
| <b>Module:7</b>   | <b>Wavelet Based Compression</b>   |            | <b>5 hours</b>  |
| Fundamentals of wavelets – Various standard wavelet bases – Multi resolution analysis and scaling function – JPEG 2000.   |  |            |                 |
|   |  |            |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>   |            | <b>2 hours</b>  |
|   |  |            |                 |

| At the end of this course students should be able to:  |                                       |                               |          |          |          |          |
| <ol style="list-style-type: none"> <li>1. Analyze the programs involving the advanced networking program constructs.</li> <li>2. Choose the appropriate database technique for solving the real world problem.</li> <li>3. Demonstrate hibernate and use them in appropriate applications.</li> <li>4. Propose the use of JSF for different scenarios.</li> <li>5. Explore various methods for web application development.</li> <li>6. Choose appropriate elements to facilitate network event</li> </ol> |                                       |                               |          |          |          |          |
| <b>Module:1</b>  | <b>JDBC Programming</b>               | <b>4 hours</b>                |          |          |          |          |
| JDBC Architecture, Creating simple JDBC Application, Statements, ResultSet Operations, Batch Updates in JDBC, Creating CRUD Application, Using Rowsets Objects, Managing Database Transaction.   |                                       |                               |          |          |          |          |
| <b>Module:2</b>  | <b>Servlet API and JSP – Overview</b> | <b>4 hours</b>                |          |          |          |          |
| Servlet Introduction, Working with ServletContext and ServletConfig Objects, Response and Redirection, Filter API, Hidden Form Fields and URL Rewriting, Servlet Events - ContextLevel and SessionLevel. JSP Architecture, JSP Scripting Elements, JSP Directives, JSP Action, JSP Implicit Objects, JSP Standard Tag Libraries, JSP Custom Tag  |                                       |                               |          |          |          |          |
| <b>Module:3</b>  | <b>J2EE and Web Development</b>       | <b>4 hours</b>                |          |          |          |          |
| Java Platform, J2EE Architecture Types, Java EE Containers, Servers in J2EE Application, Web Application Structure, Web Containers and Web Architecture Models. Request Processing in  |                                       |                               |          |          |          |          |

|   |  |                 |
|---|--|-----------------|
| Web Application.  |  |                 |
|   |  |                 |
| <b>Module:4</b>   | <b>Advance Networking</b>              | <b>4 hours</b>  |
| Introduction of Socket, Types of Socket, Socket API, TCP/IP client sockets, URL, TCP/IP server sockets, Datagrams, java.net package Socket, ServerSocket, InetAddress, URLConnection, RMI Architecture, Client Server Application using RMI   |  |                 |
|   |  |                 |
| <b>Module:5</b>   | <b>Hibernate</b>                       | <b>4 hours</b>  |
| Introduction to Hibernate, Exploring Architecture of Hibernate, O/R Mapping with Hibernate, Hibernate Annotation, Hibernate Query Language, CRUD Operation using Hibernate API.   |  |                 |
|   |  |                 |
| <b>Module:6</b>   | <b>Java Web Frameworks: Spring MVC</b> | <b>4 hours</b>  |
| Spring Introduction, Spring Architecture, Spring MVC Module, Life Cycle of Bean Factory, Constructor Injection, Dependency Injection, Inner Beans, Aliases in Bean, Bean Scopes, Spring Annotations, Spring AOP Module, Spring DAO, Database Transaction Management, CRUD Operation using DAO and Spring API. |  |                 |
|   |  |                 |
| <b>Module:7</b>   | <b>Java Server Faces</b>               | <b>4 hours</b>  |
| Features of JSF, JSP Architecture, JSF request processing Life cycle, JSF Elements, JSF Expression Language, JSF Standard Component, JSF Facelets Tag, JSF Converter Tag, JSF Validation Tag, JSF Database Access, JSF PrimeFaces.  |  |                 |
|   |  |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>                   | <b>2 hours</b>  |
| <b>Total Lecture hours:</b>   |  | <b>30 hours</b> |
| <b>Text Book(s)</b>   |  |                 |
| 1.Core and Advanced Java, Black Book, Recommended by CDAC, Revised and Upgraded by Dreamtech Press, 2018  |  |                 |
| 2.Richard M Reese, Learning Network Programming with Java, Packt publisher, 2015  |  |                 |

|---|--|----------|
| Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar |  |          |
| <b>List of Experiments</b>  |  |          |
| 1.  | Write an application which will retrieve IP address for given website.   | 2 hours  |
| 2.  | Write a JDBC application which will interact with Database and perform the following task.<br>1) Create Student Table with RollNo, Name, and Address field and insert few records.<br>2) Using PreparedStatement Object display the content of Record.<br>3) Using PreparedStatement Object Insert Two Record.<br>4) Using PreparedStatement Object Update One Record.<br>5) Using PreparedStatement Object Delete One Record.<br>6) Using PreparedStatement Object display the content of Record. | 4 hours  |
| 3.  | Create Servlet file which contains following functions:<br>1. Connect<br>2. Create Database<br>3. Create Table<br>4. Insert Records into respective table<br>5. Update records of particular table of database<br>6. Delete Records from table.<br>7. Delete table and also database.  | 4 hours  |
| 4.  | Write down the program in which input the two numbers in an html file and then display the addition in JSP file.<br>Write down a program which demonstrates the core tag of JSTL.  | 4 hours  |
| 5.  | Use Hibernate Query Language to insert, update and delete records in database.   | 4 hours  |
| 6.  | Study and Implement MVC using Spring Framework   | 4 hours  |
| 7.  | Inject Service using Aspect Oriented Programming.  | 4 hours  |
| 8.  | Use JSF Standard Components and Facelets Tags.   | 4 hours  |
| Total Laboratory Hours  |  | 30 hours |
| Mode of assessment: Project/Activity                                  |  |          |

|                                 |            |      |            |

| Fundamentals of Computer Design- Fundamentals of RISC, CISC architecture- Data path implementation-Single cycle Data path- Multi cycle data path-Multi cycle Instruction execution- Instruction Scheduling.   |   |                               |          |          |          |          |
| <b>Module:2</b>   | <b>Instruction Level Parallelism</b>            | <b>8 hours</b>                |          |          |          |          |
| Introduction to Instruction Level Parallelism – Concepts and Challenges – Advanced Branch Prediction - Dynamic Scheduling – Static scheduling- Hardware-Based Speculation – Multithreading - Limitations of ILP.  |   |                               |          |          |          |          |
| <b>Module:3</b>   | <b>Data Level Parallelism</b>                   | <b>5 hours</b>                |          |          |          |          |
| Vector architecture – SIMD extensions – Graphical Processing Units and applications – Loop level parallelism.   |   |                               |          |          |          |          |
| <b>Module:4</b>   | <b>Multi-Threading Concepts</b>                 | <b>6 hours</b>                |          |          |          |          |

|   |  |                 |
|---|--|-----------------|
| Basic concepts of threading- Concurrency, Parallelism -Threading design concepts for developing an application- Correctness Concepts: Critical Region, Mutual exclusion, Synchronization, Race Conditions- Performance Concepts: Simple Speedup, Computing Speedup, Efficiency , Granularity , Load Balance |  |                 |
|   |  |                 |
| <b>Module:5</b>   | <b>Multi-Processor Architecture</b>  | <b>6 hours</b>  |
| Need for multi-core architectures, Architecting with multi-cores, Homogenous and heterogeneous cores, Shared resources, shared buses, and optimal resource sharing strategies. Performance evaluation of multi-core processors, Error management  |  |                 |
|   |  |                 |
| <b>Module:6</b>   | <b>Multi core architecture</b>   | <b>7 hours</b>  |
| Introduction- Centralized, Symmetric and Distributed Shared Memory Architectures –Cache Coherence Issues – Performance Issues – Synchronization – Models of Memory Consistency  |  |                 |
|   |  |                 |
| <b>Module:7</b>   | <b>Multi Core and GPU Programming</b>  | <b>6 hours</b>  |
| Multi core programming using OpenMP, OpenMP Directives, Parallel constructs, Work-sharing constructs, Data environment constructs, Synchronization constructs   |  |                 |
|   |  |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>   | <b>2 hours</b>  |
| <b>Total hours:</b>   |  | <b>45 hours</b> |
| <b>Text Book(s)</b>   |  |                 |

Implement the concepts approximation on various graph algorithms.</li> </ol>  |                                       |                           |   |   |   |   |
| <b>Module:1</b>  | <b>Basics of Graph and Operations</b> | <b>4 hours</b>            |   |   |   |   |
| Fundamental concepts - basic definitions of graphs and digraphs -Subgraphs and other graph types- Representing graphs as matrices- Graph transformation - operations, properties, proof styles   |                                       |                           |   |   |   |   |
| <b>Module:2</b>  | <b>Graph Algorithms</b>               | <b>6 hours</b>            |   |   |   |   |
| Elementary Graph Algorithms -Representations of graphs - Breadth-first search - Depth-first search -Topological sort - Strongly connected components -Representing graphs in a computer - Minimum Spanning Trees - Growing a minimum spanning tree - The algorithms of Kruskal and Prim .  |                                       |                           |   |   |   |   |
| <b>Module:3</b>  | <b>Shortest Path Algorithm</b>        | <b>5 hours</b>            |   |   |   |   |
| Single-Source Shortest Paths - The Bellman-Ford algorithm - Single-source shortest paths in directed acyclic graphs - Dijkstra's algorithm -Difference constraints and shortest paths - Proofs of shortest-paths properties - All-Pairs Shortest Paths -Shortest paths and matrix multiplication - The Floyd-Warshall algorithm - Johnson's algorithm for sparse graphs .  |                                       |                           |   |   |   |   |

|   |   |                 |
|---|---|-----------------|
| <b>Module:4</b>   | <b>Maximum Flow</b>   | <b>5 hours</b>  |
| Maximum Flow - Flow networks - The Ford-Fulkerson method - Maximum bipartite matching - Push-relabel algorithms - The relabel-to-front algorithm.   |   |                 |
| <b>Module:5</b>   | <b>Exponential Algorithm</b>  | <b>7 hours</b>  |
| Independent set-Chromatic Number-Domatic Partition-The travelling Salesman Problem-Set Cover- Dominating Set-Subset Sum.  |   |                 |
| <b>Module:6</b>   | <b>Graph Classes and Fixed Parameter Algorithms</b>   | <b>8 hours</b>  |
| Perfect Graph-Cographs-Distance Hereditary graph-Chordal Graphs-Interval Graph-Permutation graphs-Vertex Cover-Kernel of Vertex cover-Minimum fill in-Homogeneous colouring of perfect graph. |   |                 |
| <b>Module:7</b>   | <b>Approximation Algorithms</b>   | <b>8 hours</b>  |
| Approximation Algorithms - The vertex-cover problem - The traveling-salesman problem - The set-covering problem - Randomization and linear programming - The subset-sum problem               |   |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>  | <b>2 hours</b>  |

|---|---|------------|-----------------|
| Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar |   |            |                 |
| <b>List of Indicative Experiments</b>                                 |   |            |                 |
| 1.  | Analysis of security in Unix/Linux.   | 2 hours    |                 |
| 2.  | Administration of users, password policies, privileges and roles  | 2 hours    |                 |
| 3.  | Eavesdropping Attacks and its prevention using SSH  | 2 hours    |                 |
| 4.  | Deep Packet Inspection on IP/ICMP Vulnerabilities   | 2 hours    |                 |
| 5.  | Deep Packet Inspection on TCP/IP Vulnerabilities  | 4 hours    |                 |
| 6.  | Implement your design using Windows Folder structure to activate directory and computer to create security groups that meets your requirement | 4 hours    |                 |
| 7.  | Group Policy Management to edit the default domain policy to a specific organization unit.  | 2 hours    |                 |
| 8.  | Create new rules in Windows firewall to allow the HTTP connection and verify that the new rules allow the HTTP incoming request.              | 2 hours    |                 |
| 9.  | Basic defensive practice skills against malicious SQL injection attacks in mobile software development.                                       | 2 hours    |                 |
| 10.   | Defense of Brute Force Approach of Gaining Access MySQL Database with Weak Authentication   | 2 hours    |                 |
| 11.   | Design a system to detect all the instances of an attack using signatures   | 4 hours    |                 |
| 12.   | Examine network traffic and identify potentially malicious traffic  | 2 hours    |                 |
| <b>Total Laboratory Hours</b>   |   |            | <b>30 hours</b> |
